TO BUILDERS, BUILDING SOCIETIES, or GENTLEMEN, seeking sites for the erection of Villa Residences TO BE SOLD, about 30 acres of valuable FREEHOLD BUILDING LAND, situated on an eminence, adjoining the borough of Reading, beautifully ornamented with timber, and commanding magnificent views. It has a frontage of above 3,000 feet to fine roads; and being within a few minutes' walk of the borough, enjoys all its advantages, although free from all borough rates.—For particulars, apply to Mr. LEPIARD, Reading, Berks.

FINCHLEY.—LAND fronting the Regent's Park road, and East-end-road, TO BE LET on Building Leases for ninety nine years, with power of enfranchisement. Plots from one to four acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-inn-square.

IN the Vauxhall-bridge-road, Pimlico.—To IRONMONGERS, GROCERS, CHEESEMONGERS, and OTHERS.—Capital commanding corner BUSINESS PREMISES, and and a HOUSE, with SHOP adjoining, admirably adapted for carrying on any wholesale or retail trade, most eligibly situate in the above extensive thoroughfare and crowded locality, the corner premises being well adapted for an ironmongery business, in which it has been long established.—Apply to Mr GEORGE GOULDSMITH'S Offices, 3, Pont-street, and 24 Belgrave road, Pimlico.

VERY desirable FREEHOLD LAND TO LET on building leases, at Reigate, Norwood, Balham, and Payne's-road, Cheltham-park.—For terms and particulars, apply to Mr. KNOWLES, 2, Raymond buildings, Gray's-inn.

ONE HUNDRED ACRES of LAND, with good newly-erected HOUSE TO BE SOLD, one mile from Farnham and three from Aldershot camp. The house is on a dry soil, pleasantly situate in the centre of its own grounds, and contains drawing and dining rooms, five bed-rooms, kitchen, wash-house, and cellar, conch-house and stable, with man's room over, and convenient offices. The land is in a ring fence, forty acres of which are planted with larches, now of fair years' growth, about twenty acres in cultivation, and the remainder in heath.—Apply to Mr. RUDGE, Estate Agent, Farnham.

CAMDEN-PARK, TUNBRIDGE WELLS. PLOTS of LAND, offering great attraction for building houses and villas, of first-rate consequence, TO BE SOLD, or LET on LEASE, for 140 years (copies of Messrs STONEWALL and SIMPSON, Solicitors); or of Mr. J. M. RICHARDSON, Auctioneer, Tunbridge Wells.

NEW WINDSOR ESTATE.—Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences, with Stabling, which are much needed in this beautiful locality. The situation is the finest in or near Windsor, abutting on the Park and Long Walk, and commanding a splendid view of the Castle. Within ten minutes of the Great Western and fifteen minutes' walk of the South-Western Railway Stations. Advances can be had by responsible parties.—For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 2, Dane's-inn, Strand.

TO BUILDERS and OTHERS. — An APPROPRIATION TO BE DISPOSED OF, entitling the holder to an immediate advance of 200l. for ten years without interest. Principals or their solicitors only treated with.—Address by letter to Mr. BOULTON, Solicitor, care of Mr. Joseph Lee, News Agent, Bulliter-square, London.

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, land tax redeemed.—TO BE LET, upon building leases, for nine-and-seven years, eligible BUILDING SITES upon the above Estate. The continual demand for houses in this locality, and the picturesque position of the property, adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves. For plans and terms apply to the Secretary of the Orphan Working School, 31, Haddgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street, the Architects; Messrs. WERNERT and ASHDOWN, 42, Charing-cross; or at the Lodge attached to the School.

TEMPERANCE PERMANENT LAND and BUILDING SOCIETY. Offices—34, Moorgate-street, London.

Shares 30l. Subscriptions 4s. per month. Entrance fee, 1s. per share.

All persons, whether abstainers from intoxicating drinks or not, may become members or depositors.

STRATFORD ESTATE.

Applications for allotments on the second portion (Lots 132 to 267 of this favourable property, will be received on or before the 11th day of AUGUST, 1856. All persons joining the Society previously will be eligible to participate. This estate is distant three and three-quarter miles from the City, about five minutes' walk from Stratford Church and Forest-gate and Stratford Stations. More than twenty trains from Shoreditch, and nearly forty trains from Stratford, each day. Return ticket to Stratford, 4d. Trains leave Fenchurch-street and Shoreditch for Stratford Stations every half-hour, and vice versa. Several trains daily to and from all stations on the North London Railway.

The prices of the lots vary from 12l. to 36l. conveyance included. The lots may be paid for in one sum, or by instalments of 6s. per plot per month.

8,800l. already advanced.

BUILDING DEPARTMENT.

The premium for the advance is added to the principal, and not required to be paid down.

The interest payable is 5l. per cent and only upon the amount remaining unrepaid each year.

FIVE HUNDRED POUNDS will be OFFERED to the MEMBERS on MONDAY, JULY 7th, 1856.

Persons taking shares on or before that date may tender for the whole or any part of the above.

Forms of tender, prospectuses, and further information at the Office, or by letter addressed to

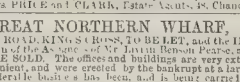
HENRY J. PHILLIPS, Secretary.

NO. 2, KEPPEL-STREET, Russell-square. Profitable LEASEHOLD, for investment or occupation, of the estimated value of 70l. per annum, forty-two years at 12l 13s. per annum, suitable for a builder, surveyor, &c. a substantially built HOUSE, containing ten rooms, and a large office at the back, with private entrance. TO BE SOLD.—For particulars, apply to Messrs. GADSDEN, WINTERFLOOD, and ELLIS, 18, Old Broad-street.

GROUND-FLOOR, Hanover-street, Hanover-square, TO BE LET. Suitable for architects, artists, or other professions; comprising two front offices, and large room behind now used as a picture-gallery.—LAHEE, 65, New Bond-street, Agent. (417 b)

TO POTTERS, BRICK-MAKERS, and OTHERS.—TO BE LET, ELEVEN ACRES of LAND, containing pipe-clay, brick-earth, fire-clay, and fine sand, situate in a very desirable locality of Hants, within a short distance of the most important commercial towns. The whole of the buildings, machinery, plant, and advantages to be Let, on moderate terms, or taken as a fair valuation.—For further particulars, apply to Mr. S. BROAD, 55, Above-bar, Southampton.

THE ERECTION of SHIRLEY CHAPEL, near Croydon, for SALE.—The building has been erected about fifteen years; it is about 70 feet by 40 feet, and consists of sound brickwork, with capital framed roof, covered with slates, eight Gothic-headed windows, with quarry lights, boarded floor, reading-desk, pews, open seats, and fittings.—For terms, apply to Messrs. BLAKE, Croydon.



TO MANUFACTURERS, SAW-MILL PROPRIETORS, PUBLIC COMPANIES, and OTHERS. TO BE LET on lease, very extensive PREMISES, situate at Old Ford, Bow, on the banks of the canal, comprising a large factory, with 36-horse power steam-engine, warehouses, &c. and a covered frontage of 250 feet to the road. For particulars, apply to Messrs. PRICE and CLARK, Estate Agents, 48, Chancery lane.

GREAT NORTHERN WHARF, YORK-ROAD, KING'S CROSS, TO BE LET, and the INTEREST therein of the Assignee of Mr Lavius Benson Pearce, a bankrupt TO BE SOLD. The offices and buildings are very extensive and convenient, and were erected by the bankrupt at a large cost. A considerable business has been, and is being carried on at the wharf, in the sale of cement, lime, bricks, tiles, drain-pipes, and similar materials. To view, apply to the MESSENGER of the Court, on the Premises; and for further particulars, to Mr. MACKRELL, Solicitor to the Assignees, 34, Cannon-street West.

WANTED to PURCHASE, a BUILDING SITE or PREMISES in London (either freehold or long leasehold), in or near a leading thoroughfare in a central situation, suitable for a charitable institution.—Letters (post-paid), stating full particulars, to be addressed to Mr. E. GOULD, 8, Charles's-court, Charing-cross.

WESTMINSTER.—TO BE LET on lease, a large YARD, 100 feet by 62 feet, with workshops, timber stages, saw-pit, &c. suitable for a builder, mason, or any manufacturing business.—For particulars apply to Messrs. EVERSFIELD and HORNE, House and Estate Agents, 40, Parliament street, Westminster.

VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 186, Blackfriars road, and 127, Union street, Borough; and of all respectable ironmongers, builders, &c.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Tazzas, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts, and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent impermeable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Pratt-street Paddington basin.

CARTS, VANS, WAGGONS, LADDERS, BARROWS, &c. Price Lists for the underm.ntioned may be had on application:—

No. 1. Carts, Vans, Waggons, Drays, and Trucks.
No. 2. Wheels and Repairs.
No. 3. Ladders, Barrows, &c.
No. 4. Hire of ditto.

G. ELL, 4, Totten ham-court-road, and 2 Palace-row, New-road, St Pancras, near the Hampstead-road.

IMPORTANT to ENGINEERS, MILLOWNERS, &c.—NORTH WOOLWICH ELASTIC STEAM PACKING. Canvas and India Rubber at 1s. 4d. per pound (Rings 3d per lb. extra), as supplied to her Majesty's dockyards. Cut rings to any size. Machine belting, hose, &c.

S. W. SILVER and CO.—Works, North Woolwich.

TESTIMONIALS.

"Commercial Mills, Cornbrook, Manchester, Oct. 6, 1854.

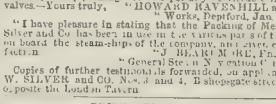
"GENTLEMEN,—We have been using almost exclusively, for the last three years, your Packing for stuffing boxes of steam and water joints, now out of which time it has stood well, and has only come under our notice but yours we consider decidedly the best and most economical. We are, yours respectfully,

"JOSHUA CROSFIELD and SONS."

"King and Queen Iron Works, Rotherhithe

"London, Nov. 11, 1854.

"GENTLEMEN,—We have tried your Packing for some time on our steam-engines, and also on steam-pipe joints, and find it efficient and economical, and to be much superior to the ordinary hemp packing. We generally employ it on the sluice valves.—Yours truly, "HOWARD RAVENHILL and CO."



"I have pleasure in stating that the Packing of Messrs. S. W. Silver and Co. has been in use in the various parts of the engines on board the steam-ships of the company, and has given every satisfaction. "J. BEARCROFT, Engineer

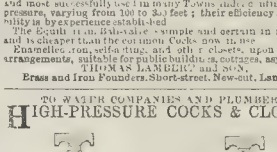
"General Steam Navigation Company"

Copies of further testimonials forwarded, on application to S. W. SILVER and CO. No. 2, and 4, Bishopsgate-street Within, opposite the London Tavern.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 300 lbs; their efficiency and durability is by experience established.



The Equilibrium Valve is a simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

KENT'S PAINTING-BRUSHES are of the very best quality, and may be obtained at all the first houses in the trade, and of the manufacturers, G. B. KENT and CO. 11, Great Marlborough-street, London. Established 1777.

N.B. Kent's Painting Brushes are all stamped G. B. KENT & CO

Price Lists forwarded by post.

PAINTERS' BRUSHES.—J. B. TYLOR invites the attention of Painters, Builders, and the Trade to his improved ZINC-BOUND and STRING-BOUND PAINTING BRUSHES. Price-lists forwarded by post free, on application. Orders from the country should be accompanied with a reference in London.—Manufactory, 3, Bury-court, St. Mary Axe, London.

BRUSHES.—T. TEFFCOAT, from Messrs. Kent and Co's, many years a Practical Manufacturer of Painters' and Artists' Brushes, can now supply them at such prices as cannot fail to ensure the favour of all who wish to obtain a genuine article. Samples may be had at the wholesale price—Copper-bound dusters, 2s. per doz. the usual price 6s. per doz. at the Factory, 6, Middle Queen's buildings, Brompton road.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY. Established 1831

The Annual Meeting of the above Society was held in Edinburgh on the 6th MAY. The report by the Directors stated that the number of policies issued during the year to 31st MARCH last, was 834, the sums assured thereby being 293,850l; and the annual premiums thereon, 9,954.

The result of the investigation for the triennial division of profits was then announced. The surplus ascertained to have arisen amounted to 205,000l, which was wholly added to the members, but of which one-third, 68,427l. must, by the laws of the society, be set aside as a reserve for allocation at the next triennial division in 1859.

From the remaining two-thirds a Bonus was declared at the rate of 1l. per cent per annum, on all policies on which six premiums had been paid, not only on the sums in the policies, but also on the former vested bonuses.

There was left, in addition to 61,823l. of reserve above stated, a surplus of 13,023l.; together, 74,903l. to go to the next division.

The Invested Funds of the Society now amount to 2,873,261
The Annual Revenue to 169,400
The Sum at Risk to 4,764,949

Copies of the report may be obtained at the Society's Head Office, 28, St. Andrew square, Edinburgh; at the London Office, 126, Bishopsgate street Within; and at those of the Agencies.

LIFE DEPARTMENT.—Under the Provisions of an Act of Parliament, this Company now effects future risks on Four-fifths of the Profits, with Quinquennial Division, or a low rate of premium without participation in profits.

The next division of profits will be declared in June, 1860, when all Participating Policies which shall have subsisted at least one year at Christmas, 1858, will be allowed to share in the profits.

At the two divisions of profits made by this Company, the total profits ascertained to be available for the benefit of the assured have exceeded 91,000l.

At Christmas, 1854, the Assurance in force amounted to upwards of [illegible] and the Life Assurance Fund (independent of the Guarantee Capital, exceeded 1,000l.

FOREIGN RISKS.—The extra premiums required for the East and West Indies, the British Colonies, and the Northern parts of the United States of America, are much reduced.

INVALID LIVES. Persons who are not in such sound health as would enable them to insure their lives at the tabular premiums, may have their lives insured at extra premiums.

LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case to the net single premium.

ASSIGNMENTS OF POLICIES. Written Notices of, received and registered.

MEDICAL FEES paid by the Company, and no charge will be made for Policy Stamps.

NOTICE is hereby given, That Fire Policies which expire at Midsummer must be renewed within fifteen days with a Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the Kingdom, otherwise they become void.

Losses caused by Explosion of Gas are admitted by this Company.

THE LONDON and WESTMINSTER BANK issues CIRCULAR NOTES of 10l. each, payable at every important place in Europe, without delay, and free of charge, and they are cashed abroad free of commission. The Bank also issues, free of charge, Letters of Credit on all the principal cities and towns in Europe. Letters of Credit are issued only at the Head Office, in Lothbury. The Circular Notes may be obtained at the Head Office, in Lothbury, or at any of the Branches, viz.—

Westminster Branch, 1, St. James's-square.
Bloomsbury ditto, 214, High Holborn.
Soho Branch ditto, 4, Wellington-street, Strand.
Eastern ditto, 87, High-street, Whitechapel.
Marylebone ditto, 7, Stratford-place, Oxford-street.
Temple Bar ditto, 217, Strand.

The rate of interest allowed on deposits of 500l. and upwards, at the Bank or any of its Branches, is now 3 per cent.

J. W. GILBART, General Manager.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL — Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Marie, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Rodding, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS. The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 53, Old Broad-street, London; to Mr. MC NUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.

Agent at Works—Mr. THOMAS WEEKES.

Agents in London, Messrs. GEORGE POTTER and CO. Lime-merchants, Purfleet-wharf, East-street, Blackfriars, and No. 19, North wharf-road, Paddington.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality, Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms.—Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 62, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

PORTLAND and BATH CEMENTS. TATHAM and CO. 14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT. Glazed Stoneware Sewage Pipes. Brick, Lime, and Cement Merchants, TATHAM and CO. 14, South Wharf, Paddington.

PORTLAND and ROMAN CEMENT. PLASTER of PARIS Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs. Warehouse, No. 1, Wharf, Paddington-basin.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. Thus, internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the Trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 8d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

W. and P. are the Grey Stone Lime Works on the Medway, near Rochester.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non-absorbent). STUCCO, CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 1, George-yard, Lombard-street.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead; whilst the consumption of material is less than for one coat. It dries very fast and hard.

HUBBUCK'S STAIR CASTLE PAINT is the same as the former, at three fourths the price.

HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and Iron Steamers, as it neither emits noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages, unstamped. Hundreds, London. Patent; and when so marked the quality is guaranteed.

HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Timber coated with this Enamel is not attacked by the worm, neither do barnacles attach to it.

Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.

OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can supplied with any quantity they may require, either at his Wharf, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by C. N. at the master has instructions to produce (on demand) the canal bargee's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 16, South Wharf, Paddington, or D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southam, Warwickshire.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works. Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilnecote.—Office, at Warwick.

CHARLES RICHARDSON, 3 & 8, SOUTH-WHARF, PADDINGTON BASIN. COWLEY AND KENT BRICKS, PORTLAND, ROMAN, AND OTHER CEMENTS, TAMWORTH GLAZED SEWAGE PIPES BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 8 South Wharf, Paddington.

NOTICE.

CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.

All applications for prices and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

PLASTER of PARIS manufactured by T. P. BLYTH, Baldwin's-place, Gray's-inn-lane, Holborn. The trade and shippers supplied on advantageous terms. Roman and Keene's Cement, Tiles, Plasterers' Hair, Pan and Plain Tiles, Fire Goods, &c.

THE BEST HERTFORDSHIRE MALM SECONDS: THE BEST WHITE SUFFOLK and RED FACINGS: WHITE SUFFOLK PERFORATED BRICKS; DEEP-RED RUBBING BRICKS. Also COWLEY and KENT DOCKS, in any quantities. J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY (Within a short distance of the five bridges). THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and FACINGS, in any quantity. Also, STOCKS, of FIRST QUALITY. J. EASTWOOD and SONS, Belvidere-road, Lambeth.

HERMITAGE BRICKYARD, North-end, Fulham.—The best description of STOCK BRICKS now ready for sale at this yard. Gentlemen and builders are respectfully invited to inspect the quality of these bricks. Price for cash, 26s. per 1,0 0.

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane, Dulwich. Price of good stock bricks, 25s. per thousand on the field, for cash.—Application to be made to the Foreman, A. BANHAM, at the Works.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, fine for building and pottery work, Foundry Loam, Whiting, Whiting Sand, for ashpbalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by large from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 50 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S barf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, &c. for exportation.

General Office—No. 12, GEORGE-YARD, LOMBARD-STREET. Letters addressed to Grays Essex, will meet with immediate attention.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at 21 DOLDS Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.

Malm Place, half-wasted Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Barges loaded with the above quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1855.—Any further information, or the machine on trial, on application to J. H. CHAMBERLAIN, 15, Savoy-street, Worcester.

TIVIDALE BLUE BRICK and TILEWARE WORKS, and STAFFORDSHIRE SANITARY PURE POTTERY, Tividale, near Birmingham. WILLIAM GILBERT, Manufacturer.

TO BRICKMAKERS.—The Price of 70,000 best STOCK BRICKS, and 20,000 best PLACE BRICKS, delivered on wharf at Brentford.—Address to WILLIAM CURRY, Esq. Architect, Surveyor, &c. &c. 7, Denbigh-place, Pimlico.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented.

HENRY C. MOUNT, Sec. 37, King William Street, City.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES, For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.

SOLE AGENT, J. B. LAWES, 1, Adelaide-place, London-bridge.

This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.

Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 6d. per foot. This charge to include tiles delivered in Agent's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Ruchy.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURORS," page 861, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

H. and R. HAYWOOD, Brownhills Blue Metallic Tileries, near Burslem, Staffordshire; London Depôt, 16, South Wharf, Paddington, Manufacturers of Improved Plain and Ornamental Roofing, Ridge, and Flooring Tiles, for Churches, &c.; also Metallic Flue and Socket Sewerage Pipes, &c. adapted for Sanitary and Railway purposes. They are extensively used on the London and North Western, Great Western, Trent Valley, North Staffordshire, and other Lines of Rail, and highly approved. Warranted imperishable, and to resist all acids and exhalations.

*** A FIRST-CLASS MEDAL was awarded to H. and R. HAYWOOD, by the Jury of the GREAT EXHIBITION.

HOGG'S GARDEN EDGE TILES.—The attention of persons engaged in laying out Gardens for Public Institutions is solicited to these Tiles, as an elegant, cheap, and permanent substitute for box edging. In colour they resemble Bath stone, are very hard, easily laid down, afford no shelter for vermin, and act as a drain to the paths. Price 13s. per 100, or about 4d. per yard run.—Full particulars on application to R. BLACKETT, Witham, Essex.

TO ELECTRIC TELEGRAPH COMPANIES, RAILWAYS, and ENGINEERS.—GODEFROY'S IMPROVED PATENT GUTTA PERCHA, tested on all points by eminent engineers, and proved to be far superior to any other covering for electric wire. Orders received for the Patentee by G. TRIMBEY, 41, Queen's street, Cheapside.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids, and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gaskets, solid pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., YENTNOR, ISLE of WIGHT. —Second Testimonial.—"March 10th, 1853.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bengeworth, Lancaster.

No. 1 quality, inches diameter, and price per yard.

½	¾	1	1¼	1½	1¾	2	2½	3 in.
9d.	11d.	1s.	1s.	1s.	1s.	1s.	2s.	2s. per yard.

Super-extra stout quality.

2	2½	2¾	3 inches.
2s.	2s. 3d.	2s. 6d.	3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

½	¾	1	1¼	1½	2 inches
6d.	9d.	11d.	1s.	1s. 3d.	1s. 6d. per yard

The hose is Barretterized at an extra charge of 4d. per yard Union Joints, Branch Pipes, and Jets, are also supplied.

J. B. Brasted.—On Tuesday, Thursday, and Saturday, at Three, Lecture by J. H. Pepper, esq. on the Moon Controversy. On these same days, at Four and Nine, the Historical Tournament of Kenilworth, and at half-past Three and Eight Performances by Madle. Maddie on the Cither, and Herr Zoom on the Child's Mouth-organ.

THE EXTENSIVE SHIP-BUILDING ESTABLISHMENT AND IRON WORKS OF MR. C. J. MARE, AT BLACKWALL.

MESSRS. FULLER and HORSEY, in conjunction with Messrs. PULLEN and SON, are instructed by the Assignees, with the consent of the Mortgagees, to OFFER for SALE by AUCTION, at the AUCTION MART, London, on the 30th of JULY next (unless an acceptable offer be previously made by private contract), in four lots, the extensive SHIP-BUILDING ESTABLISHMENT and IRON WORKS of Mr. C. J. Mare; together with the whole of the valuable fixed PLANT and MACHINERY. These works, which together occupy a site of 14a. 3r. 30p. are situated at Blackwall, on the opposite banks of Bow-creek, at its junction with the Thames, a portion of the works having a direct frontage near the Thames. The land fr. ms its river frontage to the rear of the premises, Blackwall, and on the North Woolwich Railway, near the junction of the Victoria Dock Line, by means of which and the North London Railway, direct communication with the northern and midland districts is established. The approach from the City is easy and frequent throughout the day, by the Blackwall and North Woolwich Lines, from their joint terminus in Fenchurch-street, by means of which the northern and southern division of the works are reached within half an hour; there is also a ferry across Bow-creek for the facility of communication. The resources of the establishment for the purposes of ship-building, conversion of iron, and general engineering works are unequalled in the world, upwards of 36 000 tons of shipping having been built and launched in the years 1853 and 1854 from the yards, while from the forge and iron works upwards of 17,000 tons of iron have been hammered and rolled within the same period, and from the foundries upwards of 4,000 tons of castings delivered. The high character of the work executed has gained for the firm a world-wide reputation. In this building have been built for the English, Turkish, Russian, Spanish, and Sardinian governments, the Peninsular and Oriental, the General Screw, and the General Steam Navigation Companies, the Dover Mail Packet Company, the South-Western (Jersey) Company, and private individuals, unsurpassed in speed, and without a failure in any case. Among others may be named the two-masted *Hamidieh* of 1,000 tons burthen, the *Pera*, the *Fenice*, the *Giulia*, the *Hydra*, the *Spes*, the *Cecile*, the *Ida*, the *Pluto*, the *Indiana*, the *Crimea*, the *Ionian*, the *Envoy*, the *Genoa*, the *Transit*, the *Perseverance*, &c., with many others; also yachts for the Emperor of Russia and his Highness the Viceroy of Egypt; and such are the appliances and facilities afforded by existing arrangements, that the rapidity with which the works are carried on is perfectly astonishing. The works executed in the forge department, including marine engine shafts, upwards of 20 tons in weight, and frames of the largest description for the principal engineers in London, the total weight of hammered iron produced in one year exceeding 4,000 tons. The Engineering Department have executed a considerable portion of the Britannia Tubular Bridge, upwards of 1,000 tons of wrought-iron bridges for the East-India Railways, the wrought-iron bridges for the North London Railway, the beautiful iron roof for the terminus of the Shoreditch Railway, and a large portion of the iron work at present completed for the new bridge at Westminster; while in the Boilermakers' Department, marine boilers, equal to 4,000-horse power, can be produced annually.

The principal buildings are on the freehold portion of the property, and have been erected in the most substantial manner; they include the hammer and rolling-mills, the four-fires, engineers' shops smithies, press and pattern-makers' shops, and large fitting-shops from ten to twelve tons, the two larger ones having double cranes and furnaces, the whole forming a two-fold capacity; four fire-hearths, three sets of rolling mills for plates and bars, worked by compound steam engines, equal to 160-horse power, steam hammers, punching presses, bending rolls, planing and slotting machines, drilling machines, numerous self-acting lathes, several of which are adapted for the largest work; smiths' forges, plate, angle, and bulling furnaces; fitters' lathes and tools, &c. The whole of the machinery, both for ship and engine work, is of the most improved, a considerable portion new within three years; a spacious boiler-makers' shop, fitted with forges, furnaces, shearing, punching, and drilling machines; steam riveting machine, travelling cranes, &c., an angle iron-making plant, 14 inches per ton, whole the most extensive in London of its kind; a capacious mould loft, a saw mill fitted with timber and deal sawing frames, planing, moulding, and tenoning machines, worked by a 60-horse power steam-engine. In the ship-yard are twelve slips for building vessels of the largest tonnage, steam kilns, saw-pits, mast house, boat-building and block-making shops, joiners' and carpenters' shops, riggers lofts, stores of various descriptions, offices, and other buildings. The situation of these works affords the greatest facility for the transit of heavy land or water carriage as there is at present on to the North Woolwich Railway, and several wharfs next the water side, with powerful cranes one of them being a steam crane equal to twenty-five tons. The premises of the East India and Victoria Docks is also of great advantage. The immense extent of coals during the season, with masses of iron per ton, whole the most extensive terminus of railways in the metropolis, from which a large quantity of waste iron and scrap rails are annually obtainable, together with the vast accumulation of waste from the different manufacturing establishments in London ensure a constant and sufficient supply of scrap iron for the purposes of the mill and forge on the best possible terms. The construction of these works the whole of which has been effected within the last few years, has involved an outlay approaching to a sum exceeding £100,000, and the whole of the buildings are of the most substantial character, and have depended under the immediate superintendence of eminent practical men. The result shows the formation of an establishment of great extent, enormous in its capabilities, unrivalled in situation, and enjoying the highest reputation for the character of the works performed, possessing facilities for the transaction of business unequalled by any, and qualified by nothing within itself all the accessories requisite to command a large and lucrative trade. The tenure of the property is partly freehold and partly leasehold.

The works may be viewed till the sale, by cards only, which may be obtained shortly, together with printed particulars, of CHARLES LEE, Esq. Official Assignee, Aldermanbury; of Messrs. LAWRANCE, PLEWS, and BOYER, Solicitors, Old Jewry-chambers; of Messrs. NEWSON and EVANS, Solicitors, Warnford-place, Throgmorton-street; of Messrs. PULLEN and SON, 50, Fore-street, Cripplegate; and of Messrs FULLER and HORSEY, Billiter-street, London.

FREEHOLD LANDED PROPERTY, near BRISTOL.—To CAPITALISTS, CONTRACTORS for PUBLIC WORKS, BUILDERS, STONE-MERCHANTS, and OTHERS. — The Dundry Estate and valuable Freestone Quarries.

MR. F. G. DEBENHAM has received instructions from the mortgagee to SELL by AUCTION, at the MART, on WEDNESDAY, the 16th of JULY, at TWELVE, in two lots, the important FREEHOLD ESTATE known as "Dundry Downs," comprising about eighty acres of excellent pasture land, situate on the summit of Dundry Hill, 4½ miles from the city of Bristol, with the exceedingly valuable quarries, containing an immense quantity of the finest description of building stone, the quality of which has been reported by C. Smith, Esq. of London (one of the gentlemen appointed under the authority of the Lords Commissioners to select the stone used for the new Houses of Parliament), whose report has been published and is highly satisfactory. It is specially adapted for substantial and ornamental buildings and possesses great durability; evidence of which is supplied by the excellent preservation of Dundry church tower, built with stone from these quarries in the thirteenth century. The quarry has been recently opened, and only a small additional outlay will be required to place it in full working order.

Lot 1 comprises SEVENTY ACRES, including two cottages, occupied by Mr. Charles Withey, Mr. Chard, and Mr. Carp; and produces a present rental of £ per annum; and

Lot 2. NINE ACRES of RICH PASTURE, let to Mr. R. Batt, at £90 per annum, both formine solid landed investments, with the rare and valuable advantages, in addition, of the Royal next Leader von, from the quarries. The views from the summit of the Hill are hardly to be exceeded in extent and beauty —Particulars with conditions of sale and plans may be obtained of Mr. R. Batt, Dundry, who will show the Estate; of Messrs Aspinall and Son, Surveyors, Bristol; of Messrs Dawes, Norwich; of Mr. J. G. Hobbs, Solicitor, Bristol; and at Mr. Debenham's Auction and Estate Agency Offices, 80, Cheapside, London, where also specimens of the stone can be seen.

WIMBLEDON-COMMON (park side). — Important Sale of Freehold Building Sites, of from one and a half to four acres

CHINNOCK and GALSWORTHY will SELL by AUCTION, at the MART, on THURSDAY, the 3rd of JULY, at TWELVE, in lots of convenient size, FREEHOLD BUILDING PLOTS, especially adapted for the erection of first-class villas, which let and sell in this locality immediately or before they are finished. The land forming this sale comprises the Durham-hill portion of the beautiful domain of Wimbledon-park, eminently distinguished as the most healthful neighbourhood in the environs of London, being only six miles from Hyde-park, and near the Wimbledon, Putney, and Wandsworth Railway Stations. The estate is well supplied with pure water from its own well, lighted on the gutsaic's gas, and is unsurpassed for its picturesque scenery and delightful drives. These lots may be approached dry from Portsmouth by the Park Lodge House, the grounds of Belmont-house, by the entrance near the Wimbledon station; also by the lodge drive at Putney-heath, through the plantation, which leads to the brow of the hill, commanding the autumnal amphitheatre formed by these very eligible building sites.—Descriptive particulars and plans may be obtained of Messrs Batty and Wood, Land Surveyors, 26, Charles-street, St. James's; C. F. Cruso, Esq. Solicitor, Carlton-chambers, 8, Regent-street; and of Messrs. Chinnock and Galsworthy, 28, Regent street, Waterloo-place.

Freehold Building Sites, West-hill, near Wandsworth.

CHINNOCK and GALSWORTHY will SELL by AUCTION, at the MART, City, on THURSDAY, JULY 3, at TWELVE, FORTY-IX PLOTS of FREEHOLD BUILDING GROUND, comprising a portion of the West hill Estate, adjoining the Wimbledon-park domain, occupying some of the highest ground in the neighbourhood, commanding extensive views of a richly diversified country, extending to St Jeh lam and the Surrey Hills. The plots vary from a quarter of an acre upwards, and will be sold with the usual restrictions, which will secure good roads, and other advantage to parties buying plots on this estate. The sites are approached on all sides by good roads, the soil is gravelly, and the situation within ten minutes' walk of the station on the Richmond line, and contiguous to the noble avenue skirting Wimbledon-park. Villas of a respectable character on this estate meet with immediate purchasers; and for investment, the property eligible for a safe and profitable investment.—Plans and particulars may be obtained of Messrs. Bethell and Wright, Solicitors, 26, Charles-street; of C. F. Cruso, Esq. Solicitor, Carlton-chambers, 8, Regent-street; and of the Auctioneers, 28, Regent street.

SOUTHALL, MIDDLESEX.—IMPORTANT to BUILDERS.—An excellent Freehold Residence, seated in park-like grounds, and several Freehold Building Sites, eligible for villas or cottages to the high road, situate close to the station, with immediate possession.

CHINNOCK and GALSWORTHY have been favoured with instructions to SELL by AUCTION, on THURSDAY, JULY 24th, at TWELVE, at the MART, unless previously disposed of by private treaty, the important FREEHOLD mansion and part of the FREEHOLD ESTATE, as the residence of Mrs Serjeant Jones, situate in the high road to Southall, comprising a good square-built family house, stable, double coach-house, and other offices, with kitchen-garden, shrubbery, and pleasure-ground, well stocked with fruit trees, and in a most respectable manner in which situation the family have resided for many years past, and having very valuable building frontages. Descriptive particulars with plans may be obtained of Thos. Browning, Esq. Solicitor, 1, Hatton-court, Threadneedle-street; of Geo Wales, Esq. Surveyor, Great St. Helens; and at the Auction-erts' Offices, 28, Regent-street, Waterloo-place.

OLD-STREET ROAD.

MR. ALFRED DAY has received instructions to SELL by AUCTION, on the PREMISES, Stoneyard, Old-street-road, near Pitfield-street, on TUESDAY, JULY 1, 1856, at TWELVE o'clock, without reserve, a quantity of STONE; comprising stable, coach-house, and other building stone, landings, 30th coping stone, landing stone, paving stone, blue, and yellow bricks, and other effects. May be viewed on MONDAY morning of Sale; catalogues had on the Premises; and of the auctioneer, Cavendish-chambers, Fore-street.

ARTILLERY-PLACE, FINSBURY.—Capital Building Materials of seven large Residences, to clear the site for the Royal London Militia Depôt.

PULLEN and SON are honoured with instructions from her Majesty's Commissioners of Lieutenancy for the City of London to SELL by AUCTION, on the PREMISES, on MONDAY, JUNE 30, and following day, at TWELVE, in lots, the whole of the excellent BUILDING MATERIALS, FIXTURES, and FITTINGS UP of SEVEN RESIDENCES, of an unusually superior description, Nos. 19 to 25 inclusive, in Artillery-place (adjoining the Artillery Ground), comprising 800,000 capital stock bricks, prime oak and fir timber, in large and useful scantlings, 60 squares of slates and slating boards, 12 tons of lead, in gutters, flats, cisterns, and pipes, 200 pairs sheet sashes, with shutters, modern doors, partitions, handsome marble chimney-pieces, and interior fittings up, 300 squares of capital boarded and 3 timber floors, stone paving and steps, cast and other iron balconies and verandahs, 76 feet run of iron railing, 100 modern stoves and ranges, pumps, force pump, large iron hooks-to-gas fittings, and all the extensive hi-ne and other fixtures May be viewed on FRIDAY and SATURDAY previous. Catalogues had of Messrs. Pullen, Clerk to the Lieutenancy, 4, Warnford-court; of Joseph Jennings, Esq Architect, 3, Foley-place; and of Pullen and Son, 80, Fore-street, Cripplegate.

FREEHOLD GROUND-RENTS in the COUNTY of MIDDLESEX, amounting to about £601 per annum; and several Freehold Houses at rack rents

MESSRS. WINSTANLEY have received directions from the Executors to SELL by AUCTION, at the MART, on MONDAY, the 14th of JULY, and following day, in numerous lots, an extensive and valuable FREEHOLD PROPERTY; consisting of about 300 Dwelling-houses, Public-houses, Shops, and Workshops, situate on the Tile Kiln and Coldharbour Estates, in the Hackney-road, Vere-st. Trafalgar-place, Great Cambridge-place, York-place, Tuilerie street and place, Boston-street, York street North, Grosse-street, Great and Little Cambride streets, Herbert-street, Edith-street, Windmill street, Brunswick-street, Weymouth-terrace, Cumberland-street, Keat-street Water-loo-place, Bath-place, &c. Some of the leases have only short terms to run. The ground-rents will be found in the lots vary from 3l. to 30l. per annum, and amount to about 600l. per annum.—Particulars with the ready fourteen days previous to the sale; to be then inquired of Messrs. Rhodes, Esq. Solicitor, Davies-street, Berkeley-square; of Mr. Bostow; and at the Rag's Head, in the Hackney-road; the Place of Sale; and of Messrs. Winstanley, Paternoster-row.

TO CONTRACTORS, BUILDERS, CARPENTERS, AND OTHERS.

MESSRS. DAVIS and VIGERS are instructed to SELL by AUCTION, on the PREMISES, Cherry-tree yard, Bowling-green-lane, Clerkenwell, on THURSDAY, JULY 3rd, and following day, at TWELVE for ONE each day, the well-seasoned DOCK of MAHOGANY, DEAL and BATTEN, comprising 3 000 pine planks and deals, 600 yellow and white deals, 1,200 yellow and white battens, 100 squares of prepared and moulding boards, 5,500 feet of prepared pine linings, 12,000 feet of Spanish and Honduras mahogany, cut from eighteen months to three years; oak staves, American ash, beech, elm, and other planks; scantling, panels, and many useful articles. May be viewed the day previous and morning of Sale; and catalogues had on the Premises; and at the Auctioneers' Offices, 3, Frederick's place, Old Jewry.

CAMDEN-TOWN. — To CABINET and PIANOFORTE MAKERS, CARRIAGE-BUILDERS, CARPENTERS, and OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, Stanmore-place, Clarendon-street, Grove-street, near Park-street, on MONDAY, JUNE 30th, at TWELVE for ONE, 20,000 feet dry wide PINE BOARD, MAHOGANY, well-seasoned PANEL and BOARD, Deal and Batten, 3,000 feet of quartering, thirty squares of flooring, dry cut stuff, work-benches, sun-blinds, loose wood, old range, stoves, slate cistern, stone, bulk, &c. To be viewed on the Saturday prior to the sale, when catalogues may be had on the Premises, and of the Auctioneer, Carding-town-street, Hampstead-road.

The Stock of a Timber Merchant and Builder.

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 49, Union-street, Somers-town, on MONDAY, JULY 7, at TWELVE, the excellent STOCK; comprising about 2,000 planks, deals and battens; 120 squares of flooring, 7,000 feet quartering, 60,000 feet wide pine boarded pencil still, fifty dozen eight rails of oak and ash plank, 300 ash spokes, 400 ash fellows, four benches, ninety scaffold-poles, seventy-four boards and eight dozen pegs, forty-two pattern deal battens, barrows, and other useful stock.—To be viewed on the Saturday prior to the sale, when catalogues may be had on the Premises; and of the Auctioneer, Carlington-street, Hampstead-road.

TO MARBLE MASONS, BUILDERS, SCULPTORS, AND OTHERS.

MESSRS EVERSFIELD and HORNE have received instructions from Mr. Fabbricotti to SELL by AUCTION, at the WHARF, Thames Bank, Pimlico, on TUESDAY, JULY 8th, at TWELVE for ONE, a choice selection of MARBLE, recently imported, consisting of Statuary, Vein, Sienna, Black, and Gold and Silver Antique, in blocks and slabs, to which the attention of trade purchasers is invited. May be viewed two days previous, and catalogues had on the Premises, and of the Auctioneers, 10, Parliament-street, Westminster, and Coal Exchange.

PIMLICO.—MARBLE CHIMNEY-PIECES, &c.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, at the SHOW-ROOMS, Belgrave-wharf, Pimlico, on MONDAY, JULY 7th, at ONE, a selection of MARBLE CHIMNEY-PIECES, in every variety of style, also in slabs for tops and backs. Cast-iron and bronzed mountains, tablets for ditto, Italian and other marble, and slate slabs for tops, and a few Antique Busts, &c. To be viewed and catalogues had on the Premises, and of the Auctioneers, 10, Parliament-street, Westminster.

TO BUILDERS, MARBLE AND STONE MASONS, AND OTHERS.

MR. MARSH has received instructions from the Proprietors in consequence of their having disposed of the Premises, to SELL by AUCTION, on the PREMISES, 6, WHARF, MACCLESFIELD-STREET-OFTH, CITY ROAD, on FRIDAY, JULY 4th, 1856, at TWELVE o'clock, the superior stock, consisting of black, veined, and French marble, in blocks and slabs, blocks of Caen, Portland, and Hall stone, York pieces and landings, about 100 York slabs, 6 capital Ionic troughs, Kerbs, curbed and serfaced slabs, a large quantity of Portland sawtting, and miscellaneous effects. May be viewed the day prior and morning of sale, and catalogues obtain d on the Premises, and at Mr. Marsh's Offices, 2, Charlotte-row, Mansion House.

Valuable New Timber and Building Materials, Bridge Wharf, Old Ford-road, Victoria-park, near the City of Paris Tavern

MR. J. G. HALL will SELL by AUCTION, on THURSDAY next, JULY 3, at THREE, TWO THOUSAND LOADS of DEALS, Norway battens, yellow and pine plank, 200,000 feet of new quarter inch, 3-inch yellow and white boards, prepared floor battens, pantile laths, feather-edge boards, flooring, paving planks, 10-inch feet of prime yellow joists, 40 loads of capital yellow bark, &c. &c. on view the day prior to and morning of sale Catalogues may be had at Wharf adjoining the Premises, Lord Nelson, and City of Paris Taverns, Old Ford-road; Alfred's Head, Cumberland-st.; King's Arms, near Kingsland-gate; Marquis of Cornwallis, Old Ford; Rose and Crown, Victoria-park; Grey, Stratford; Abbey Arms, Plaistow; Castle, Woodford; Red Lion, Ilford; Fox and Hounds, Romford, and of the Auctioneer, 9, Crauf ord street, Old Ford-road.

NOTICE.—To MAHOGANY MERCHANTS, CABINET-MAKERS, and OTHERS.—The next Liverpool PERIODICAL SALES by AUCTION, of MAHOGANY (among which are three cargoes from St. Domingo, two being Cuba), Rosewood, Logwood, Fustic, Bahia and American white woods, &c. will take place on WEDNESDAY, the 9th DAY, 23rd, and 30th of JULY, at eleven o'clock at noon, and the following day, in the Wood Sales Shed, South end of BRUNSWICK and TOXTETH DOCKS, Liverpool.—Catalogues, containing full descriptive particulars, may be had on application to EDWARD CHALONER, Sworn Broker and Measurer, No. 6, 12-st Sct. Queen's Dock, Liverpool.

IRONMONGERY BUSINESS.—FOR DISPOSAL, a first-class BUSINESS, doing an extensive and lucrative trade in black and furnishing ironmongery. The returns are about 15 000l. per annum, a considerable proportion of which is for cash. The premises are in a commanding situation, in one of the leading thoroughfares in London, and a large sum of money has been expended within a few years in rendering them externally attractive, and in adapting the interior completely for the various branches of the business. The stock is all modern, and of the best description. About 10 000l. will be required to purchase the goodwill, fixtures, &c. of which may remain on security for two years; and to two or three active young men, who can command that sum, an opportunity is thus presented for purchasing a business, which is of the first class, of a high reputation, and capable of still further extension.—Apply (by letter only) to Messrs. FULLER and HORSEY, 13, Billiter-street, E.C.

TO BRICK and TILE MERCHANTS.—To be DISPOSED OF, owing to the completion of public works, a SUPERIOR PLANT, for the manufacture of bricks and tiles by steam power, to the extent of 20,000 daily: it includes Ingram's patent machine, an horizontal high-pressure steam engine of 10-horse power, steam engine of 6-horse power, with patent boilers, all fitted, the going gear and tackle, drying sheds, three kilns with Swaine's patent feeders and furnace, clay tempering machine, clay, and blacksmith's shop and tools, with all necessary buildings and working plant. There is sufficient brick earth of the finest character for burning off 100,000 of bricks, and brought to good road: to be had of the proprietors on most advantageous terms. Situate within 45 miles of London, and immediately adjoining a railway. To view the same, and for particulars apply to M. JOYCE, Auctioneer, St. Neot's, Hunts

---

TO CARPENTERS, CASEMAKERS, AND OTHERS.

MESSRS. ABRAHAMS and CO. 115, Great Portland-street, and 23, Mortimer-street, Cavendish-square, have to DISPOSE OF this splendid BUSINESS in the above line, doing £80l. per annum. Price, including a good house, shop, fixtures, &c. £200l. Rent £45 per annum. The whole of same nearly let off.—Apply to Messrs. ABRAHAMS and Co. Valuers, Estate, House, and General Business Agents.

TO MANUFACTURERS, particularly those engaged in Building.—CAPITALISTS have now a good OPPORTUNITY of EMBARKING in a WELL ESTABLISHED CONCERN, in full work, principally a ready-money trade. Its affairs will bear the fullest investigation, and, from circumstances, the concern is now to be disposed of. A capital of about £2,000 will be required, the party taking to stock, machinery, and debts; but the amount would be considerably reduced if the stock and debts were taken by application to Messrs. WOODHOUSE and PARKIN, 5, New-square, Lincoln's-inn; or to Messrs. WARING, ROBINS, and BARGES, 7, New-inn, London.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 14, Ye-street, Paternoster-row, St. Paul's, in the City of London, all in the County of Middlesex.—Saturday, June 28, 1856.

COMPETITIONS.

TO ARCHITECTS.—BASINGSTOKE CEMETERY.—The Town Council of Basingstoke, acting as the Burial Board, is desirous of receiving DESIGNS, SPECIFICATIONS, and ESTIMATES, for the FORMATION of a CEMETERY, comprising the erection of Episcopal and Dissenters' Mortuary Chapels, entrance building and gates, enclosure, laying out, and planting the land, and forming approaches thereto. The land, which comprises about 14 acres, is known as the "Liten," and a portion has heretofore been used as a burial place. On the site is a ruin, called the "Holy Ghost Chapel," and the Board will be ready to receive and examine separate designs, specification, and estimate for the restoration or adaptation of the same, to the purpose of an Episcopal Mortuary Chapel. Plans, &c. to be sent, free, to the Town Clerk's Office, on or before the 31st of JULY next, under motto, with a sealed letter, similarly endorsed, containing the name and address of the author. A premium of 30l. will be given to the author of the design selected, and 10l to the second chosen.—Application for further information, or to view the site, to be made to H. DOWNS, Esq. Mayor, or at my Office, Basingstoke. J. C SHEBBEARE, Town Clerk.

TO ARCHITECTS.—Proposed new Church at Blackfordby, two miles from Ashby-de-la-Zouch.—The Committee appointed for Rebuilding Blackfordby Church, are ready to receive PLANS and ESTIMATES for the WORK. The site is very high ground, the church is intended to be built of stone, of the Early English style of architecture, to hold 350 persons, and not to cost more than 1,200l. All communications to be sent on or before the 18th of JULY, and addressed to the Rev. M. VAVASOUR, the Vicarage, Ashby-de-la-Zouch.

CONTRACTS.

TO BUILDERS.—WHITECHAPEL UNION WORKHOUSE. The Guardians of the Whitechapel Union will meet at the Workhouse, in the Whitechapel-road, on FRIDAY, the 1st of AUGUST next, at THREE o'clock in the afternoon precisely, to receive TENDERS and CONTRACTS for BUILDING the FIRST PORTION of the NEW WORKHOUSE for this Union, in Charles-street, Mile-end New-town. The plans, specification, and conditions of Conarct may be inspected at the Offices of the Architect, THOMAS D. BARRY, Esq. 15, Lincoln's-inn-fields, London, and 47, Bedford-street North, Liverpool, from the 14th to the 19th JULY next. Builders proposing to Tender, or their representatives, are invited to meet the Architect, at his Office, 15, Lincoln's-inn-fields, London, on FRIDAY, the 4th of JULY next, for general explanation, and to receive particulars. Tenders must be delivered sealed up and indorsed, "Tender for Workhouse," at the Whitechapel Workhouse, previous to the time of meeting; and the person whose Tender is accepted will be required to give satisfactory security in the sum of 2,000l. for the due performance of the Contract.—The Guardians reserve to themselves the right not to accept the lowest or any Tender.—By order of the Board,

G. ADAMS FARR, Clerk to the Guardians.

THE PUBLIC HEALTH ACT, 1848.—TO CONTRACTORS and OTHERS.—The Local Board of Health for the district of Leamington, are prepared to receive TENDERS for the CONSTRUCTION of TWO COVERED RESERVOIRS (each capable of containing five millions of gallons of water), on the Newbold-hill, near Leamington, with the LAYING of a WATER MAIN, 1,150 yards in length, of 12 inches and 11 inches internal diameter, and other works connected therewith; the plans for which may be seen, and further particulars thereof obtained, on application to Mr. JOSEPH FOX SHARP, Surveyor to the Local Board, at his Office, Town-hall, Leamington; and copies of the specification and form of Tender may be obtained on application to the Clerk, at his Office, Town-hall, on payment of 10s. on and after MONDAY, the 7th day of JULY, 1856, to whom Tenders must be forwarded, endorsed "Tender for Reservoirs on Newbold-hill," on or before MONDAY, the 21st day of JULY, 1856. The Board do not bind themselves to accept the lowest or any Tender.—By order,

R. H. DAVIES, Clerk.

Town-hall, Leamington, June 17, 1856.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives notice that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall-mall, on or before the 15th JULY next, for STRIPPING and RESLATING part of the CAVALRY BARRACKS at Windsor. Printed schedules and forms of Tender may be obtained at the Royal Engineer's Office, 11, James-street, Pimlico; or of Mr. HARRISON, at the Barrack Office, Cavalry Barracks, Windsor, between the hours of TEN and THREE o'clock from the 30th JUNE to the 15th JULY next, inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, 11, James-street, Pimlico, 24th June, 1856.

NOTICE to BUILDERS and CONTRACTORS.—CONTRACT for REPAIRING certain PORTIONS of the RIVER FACE of QUEENBOROUGH WALL, and the TOP of the RIVER EMBANKMENT, from the RIGHT DEMI-BASTION to the GOVERNMENT BOUNDARY at SHEERNESS.—The Commanding Royal Engineer gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before THURSDAY, the 10th of JULY, 1856, from such persons as may be desirous of CONTRACTING with the War Department for Repairing certain portions of the River Face of Queenborough Wall, and the Top of the River Embankment, from the Right Demi-Bastion to the Government Boundary at Sheerness. The plans may be seen, and printed specifications and forms of Tender obtained, by persons fully competent to undertake the work (none others need apply), at this Office, between the hours of TEN and FOUR o'clock, till TUESDAY, the 8th of JULY, 1856, Sundays excepted. The party whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of 500l. for the due performance of the contract. Tenders for the above works to be addressed to "The Director-General of Contracts, Pall-mall, London," and endorsed, "Tender for Repairing Queenborough Wall, Sheerness." No Tender can be admitted after the said 10th day of JULY, 1856.

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Sheerness, June 25, 1856.

TO BUILDERS.—Sealed TENDERS for BUILDING the NORTH WING of NEW BARRACKS, to be erected at Devonport; separate Tenders for the Asphalte Work, and also for Laying down Pipes and Fittings for Lighting both wings of the barracks with Gas, including all requisite fitments, will be received at the War Department, Pall-mall, London, on or before THURSDAY, the 31st JULY next, at noon, addressed "To the Director-General of Contracts," and endorsed, "Tender for new Barracks, Devonport," "Asphalte Work for new Barracks, Devonport," "Gas Works for new Barracks, Devonport" (as the case may be), on the lefthand corner of the envelope. The north wing of the new barracks comprises officers' barracks and cook-houses, soldiers' barracks and cut-buildings, central building, canteen, enclosure-walls, roads, parade, &c. &c.—Plans and specifications, with terms and conditions, may be seen, forms for Tenders and every information obtained at the Royal Engineer's Office, at Devonport, between the hours of NINE and FOUR o'clock on weekdays, from TUESDAY, the 1st JULY, to TUESDAY, the 29th day of JULY next, both days inclusive.

Royal Engineer's Office, Devonport, 21st June, 1856.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Director-General of Contracts, War Department, Pall-mall, London, on or before FRIDAY, the 18th day of JULY next, from persons desirous of CONTRACTING with the War Department for ERECTING a GUNPOWDER MAGAZINE, at Upnor Castle, near Chatham. Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, on the 17th of JULY next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of 5 000l. for the due performance of the Contract. Tenders to be addressed to "The Director-General of Contracts, War Department, Pall-mall, London," and to be delivered free, endorsed, "Tender for Works at Upnor Castle." No Tender can be admitted after the said 18th day of JULY, 1856.

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Chatham, 30th June, 1856.

TO MASONS and PAVIORS.—The Board for the Repair of the Highways in the parish of West Ham, Essex, are ready to receive TENDERS for about 10,335 feet superficial of inch YORK PAVING, to be laid down in various parts of the said parish, from the eastern end of Bow-bridge to certain places in Stratford, West Ham, and Plaistow, as are detailed in the specification, which can be seen at the residence of Mr. JAMES LOUDON, Assistant Surveyor, at West Ham. Also for 3,500 feet run of ABERDEEN GRANITE KERB. Also for 6,000 feet superficial of the present pavement to be taken up, squared, and relaid in Stratford; and 50 yards of the present pitchings to be taken up and relaid. Such York paving, granite kerb, and pitchings to be supplied forthwith, the same laid down, and other works completed, by the 1st of SEPTEMBER next, unless prevented by some inevitable accident, or unless otherwise ordered by the Assistant Surveyor. Persons willing to supply all or any of such York paving, granite kerb, and pitchings, and to perform such works, may see the said specification, and obtain all other particulars by applying at Mr LOUDON'S. The Tenders are to be delivered in to Mr. ROBERT MAYPHERSON, of Plaistow, the Chairman of the Board, before TWELVE o'clock, at Noon of THURSDAY, the 10th inst.; and the Board do not bind themselves to accept the lowest or any of the Tenders unless satisfactory to all particulars. GEORGE DACRE, Straffer's green.

July 1, 1856. Clerk and Solicitor to the Board.

[For remainder of Contracts see next page.

CONTRACTS.

SAINT JAMES, WESTMINSTER.—SEWERS WORKS.—The Sewers, &c. Committee of Vestry will meet in the Vestry-room, Church-yard, Piccadilly, at SIX o'clock p.m. on WEDNESDAY, the 16th of JULY next, to receive TENDERS from persons willing to CONTRACT for all WORKS of SEWERAGE, DRAINAGE, CLEANSING of GULLIES, &c. in this parish, for one, two, or three years, from the 20th of JUNE instant. Printed forms of Tender and specification of the several works may be obtained (price 6d. each), by applying at the Paving &c. Office, Stone-yard 6, Dufour's-place, Broad-street.—The Committee do not bind themselves to accept the lowest Tender, and the contractor must provide two efficient sureties, and pay the expenses of the contract and bond.

June 21, 1856. GEORGE BUZZARD, Vestry Clerk.

TO SEWAGE MANURE COMPANIES, SCAVENGERS, and OTHERS.—The Board of Works for the Hackney District are desirous of entering into a CONTRACT for the EMPTYING of CESSPOOLS within the district, agreeably to the specifications and conditions, which may be seen, and particulars obtained at the office of Mr. JAS. LOVEGROVE, Surveyor to the Board, Town-hall, Church-street, Hackney, any morning between NINE and ELEVEN a.m. The parties contracting will be required to empty the cesspools by the atmospheric process, viz by means of a cart, consisting of a closed air tight vessel, the contents of the said vessel to be conveyed thereto, and the vessels to be charged with the soil by the exhaustion of the air therein contained. Tenders to be addressed to Mr. RICHARD ELLIS, Clerk to the Board, Town-hall, Hackney, endorsed, "Tenders for emptying Cesspools." The prices to be inserted in words, at length, and to be forwarded to the Clerk on or before WEDNESDAY, the 9th of JULY, 1856. The Board do not bind themselves to accept the lowest or any Tender.

BOROUGH of LEEDS.—WANTED, by the Town Hall Committee of the Council of this Borough, plans, specifications, and estimates for WARMING and VENTILATING the TOWN HALL at present erecting in the said borough. All plans to be sent to the Town Clerk's Office, not later than THURSDAY, the 24th JULY next, addressed to "The Chairman of the Town Hall Committee" plans, &c. for warming and ventilating." A ground plan of the building may be seen, and any information obtained, at the Office of the Architect, at the Works; but the Committee do not bind themselves to adopt the lowest estimate, or any plan which may be submitted.

By order, JOHN A. IKIN, Town Clerk.

Leeds, June 27, 1856

WARE LOCAL BOARD of HEALTH.—CONTRACT for PAVING, SUPPLYING MATERIALS, &c. The Local Board of Health are prepared to receive TENDERS from parties willing to CONTRACT for LAYING DOWN PAVING, RUBBING, and other WORKS required in forming Paths, &c. in the Town of Ware, and for Supplying best Aberdeen Granite, Curb Stone, and Wick Rockhill Flagging for the same. The lowest Tender will not necessarily be accepted.—By order of the Magistrates,

J. B. CLACY, Architect, County Surveyor.

Reading, July 4, 1856.

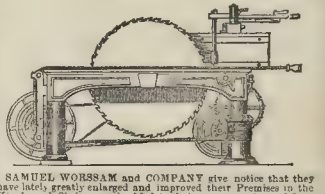
CONTRACTS.

NORTHCOTES INCLOSURE.—CONTRACT No 3.—PUBLIC ROAD BRIDGES.—The Valuer acting in the matter of the Northcotes Inclosure is desirous of receiving TENDERS for the ERECTION of TWO BRIDGES, of brick and stone, over public drains in the Township of Northcotes; plans and specifications of which may be inspected at the Offices of Messrs. MAUGHAN and FOWLER, Architects and Surveyors, Louth, from the 7th to the 19th days of JULY next, and to whom sealed Tenders are to be delivered, before the 18th day of JULY, under cover to me.

CHARLES NORTH, Valuer.

South Thoresby, June 28, 1856.

TO BUILDERS.—PLANS and SPECIFICATIONS of DRAINAGE WORKS proposed to be executed at Stanley-green, Hammersmith, may be seen at the Traveller's Rest Inn, Starch-green, on and after SATURDAY, the 5th JULY, 1856. TENDERS to be delivered at the Surveyor's Office, on or before SATURDAY, 12th JULY.



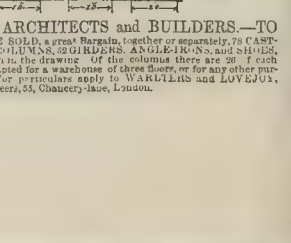
G. GORDON STANHAM, Surveyor.

North-end, Hammersmith.
The lowest Tender not necessarily accepted.

TO SAW-MILL PROPRIETORS, FANCY WOOD MERCHANTS, CABINET-MAKERS, &c.—A valuable MACHINE TO BE DISPOSED OF, in full working order, at present employed to a steam-power business, where it can remain or be removed as may best suit a purchaser. This advertisement affords an active person a fine opportunity of doing an extensive and profitable business with a small outlay. Satisfactory reasons given for parting with it.—Address, A. B. Mr. Bunting's, 9, Manor-place, King's-road, Chelsea.

PATENT MACHINES for WORKING in WOOD.—These celebrated Machines have been awarded a number of prize medals by many eminent institutions, and also by the Great Exhibition in London, and are now extensively used by the Indian, American, and all the principal governments in Europe; also by eminent Contractors, Builders, Shipwrights, Machinemakers, and other workers in wood. Their operations are in every respect perfect, either in hard or soft wood, for planing, squaring up, moulding tenoning, mortising, grooving, rebating, sawing, and boring, which they perform in a very rapid and superior manner, at a greatly reduced 03.—Sold only by WILLIAM FURNESS, Patentee, 36, Lawton-street, Liverpool, from whom full particulars may be obtained, and all the machines can be seen at work.

MACHINERY for SAWING, PLANING, MOULDING, &c.



SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand many Machines, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of trade, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

WOOD-CUTTING MACHINERY, JOHN M'DOWALL and SONS, WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow, MANUFACTURERS of VERTICAL SAW-FRAMES (driven by straps),

For cutting balks of timber, from 6 feet on the side down to the smallest deal frame.

Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached; circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross cut sawing machines, for heavy timber; planing machines, for working boards from a ⅛ of an inch thick to 6-inch deck planks; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power tenoning and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-board machines, for hat-boxes, &c.; patent saw-feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr. M'DOWALL has been in the engineering and millwright business for upwards of 30 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evinced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments, and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a rapidity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

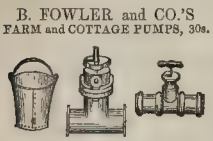
TO ARCHITECTS and BUILDERS.—TO BE SOLD, a great Bargain, together or separately, 78 CAST-IRON COLUMNS, 52 GIRDERS, ANGLE-IRONS, and SHOES, as shown in the drawing. Of the columns there are 26 of each size, adapted for a warehouse of three floors, or for any other purpose. For particulars apply to WARDLEDS and LOVEJOY, Auctioneers, 55, Chancery-lane, London.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to



THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

B. FOWLER and CO.'S
FARM and COTTAGE PUMPS, 30s.

All sizes and descriptions of Pump, in various plain or ornamental patterns, for public places; for deep or shallow wells. Brass Lift Pumps, Engine Frames, Horse Gear, Cranes, Pulley Blocks, Wrought Pails, and Rubbish Baskets, Sewer Lamps, Sluice and Hot-Water Valves, at lowest prices.

N.B. Every attention paid to country, export, and trade orders. Experienced workmen sent to any part of the kingdom, to fix PUMP WORK, HOT-WATER, STEAM, BATH, or DRYING APPARATUS.

BENJAMIN FOWLER and CO.

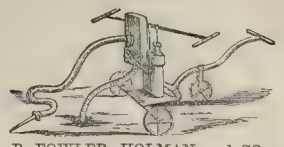
FIT UP HEATING-APPARATUS OF ALL KINDS,

For Public Buildings, Private Mansions, Offices, Manufactories, and Horticultural Buildings,

And for every purpose where artificial heat is required.

They also erect DRYING-ROOMS for ASYLUMS, UNIONS, DOMESTIC, and MANUFACTURING PURPOSES, upon the most improved principles, and upon the largest or smallest scale.

STEAM-COOKING and BATH APPARATUS FIXED;



Also PUMPS, for DEEP or SHALLOW WELLS,

To be worked by hand, horse, or steam-power;

AND ALL KINDS OF

ENGINEERS', MILLWRIGHTS', or SMITHS' WORK, for Public or Private Establishments.

The most ample references from a long experience in the above branches, can be given

B. FOWLER, HOLMAN, and CO.

SOLE MANUFACTURERS OF HOLMAN'S PATENT DOUBLE-ACTION CESSPOOL, SEWER FLUSHING, LIQUID MANURE, AND UNIVERSAL FORCE PUMP.

The simplest, cheapest, and best thing of the kind before the public; admirably adapted for thick substances; valve wags three times usual size, made to suit liquors of all kinds, hot or cold, is portable, or can be fixed with perfect ease. Delivers a large quantity at small labour. A really good article, commanding extensive home and export sale.

BENJAMIN FOWLER & CO. GENERAL ENGINEERS, WHITEFRIARS-STREET, FLEET-ST.

ST. PANCRAS IRONWORKS,

OLD ST. PANCRAS-ROAD, OPPOSITE THE OLD CHURCH, LONDON.

TO ARCHITECTS, ENGINEERS, BUILDERS, AND CONTRACTORS.

HER MAJESTY'S
ROYAL LETTERS PATENT.

OR IMPROVEMENTS IN THE CONSTRUCTION OF
CORRUGATED IRON BUILDINGS
AND ROOFS,

As erected for and approved of by Government.

FOR ENCLOSURES,

This Patent is as Strong, as Durable, and much Cheaper, than
BRICK WALLS,
And as Portable as HURDLES.

CASTINGS,
HEAVY AND LIGHT,
PLAIN AND ORNAMENTAL.

WROUGHT
IRON-WORK,
AND FORGINGS,
OF
EVERY DESCRIPTION.

SPECIMENS MAY BE SEEN AT THE WORKS.

ENAMELLED MANGERS,
From 17s. 6d.

Patentees of the latest Improvements in Manger and Rack, and Manger, Rack and Water Trough, approved of by the ROYAL VETERINARY COLLEGE.
EVERY DESCRIPTION OF STABLE FURNITURE.

IRON ROOFING OF EVERY DESCRIPTION. CORRUGATED IRON, PLAIN OR GALVANIZED, AT PER CWT.
ESTIMATES BY POST, OR ON APPLICATION. PRICES EQUAL TO ALL COMPETITION.
☞ ADDRESS—THE MANAGER OF ST. PANCRAS IRON WORKS, OLD ST. PANCRAS-ROAD, LONDON.

A
FIRST-CLASS MEDAL
WAS AWARDED TO
F. EDWARDS, SON, and CO.
AT THE
PARIS EXHIBITION,
For the SPECIMENS they exhibited of
DR. ARNOTT'S
SMOKE-CONSUMING GRATE,
AND SMOKE-CONSUMING
COOKING APPARATUS.

F. EDWARDS, SON, and CO. beg to inform the public that their STOCK of GRATES is ENTIRELY REFORMED, and consists SOLELY of GRATES on the SMOKE-CONSUMING PRINCIPLE. A large variety in real Bronze, Ormolu, Steel, and Berlin Black, suitable for Drawing-rooms, Dining-rooms, and Libraries, from 7l. to 30l.

The following are the prices of those for ordinary use:—
Black Grates, for Parlours, Offices, &c. from 4l. to 8l. 10s.; for Bed-rooms, Offices, &c. from 2l. 10s.

By the Grates on this principle, as properly constructed by F. Edwards, Son, and Co smoky chimneys are avoided, an agreeable fire is maintained, with one-half the trouble attending the ordinary grate, and a saving of from forty to fifty per cent. is effected in the consumption of fuel.

PROSPECTUSES, WITH FULL PARTICULARS AND TESTIMONIALS, SENT ON APPLICATION.

To be seen in daily operation at the Show Rooms, 42, Poland-street, Oxford-street, London.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:
BENHAM AND SONS,
19, WIGMORE-STREET, LONDON;
and at the Crystal Palace, Sydenham.

ESTABLISHED 1817.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES
beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	1¼	7s. 0d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1½ inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent, that a direct end grain of the iron is presented longitudinally, and which become, when built into the brick-work, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.
London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

STEVENS AND SON,

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the fall of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use. Patent Loose-Box Fittings. Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking.
Improved Horse Boxes, Cheap and Durable Corn-Bins.
Improved Surface Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.
The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

WROUGHT-IRON GIRDERS for BRIDGES and BUILDINGS, manufactured and guaranteed as to strength.
CAST IRON GIRDERS, for BRIDGES and BUILDINGS.
Castings of every description.
ROLLED WROUGHT-IRON FLITCHES, for trussing between timber.
Orders executed in three days.
SCORES, BOLTS & NUTS, SPIKES, RIVETS, CUT-NAILS, WROUGHT ditto, SCREWS, BOND HOOPS, CHAIN, &c.

CONTRACTORS' PLANT, RAILS, EARTH WAGGONS, and IRON WORK, for Wood Waggons, &c.

MATTHEW T. SHAW,
64, CANNON-STREET (late with C. J. Mare and Co.).

WROUGHT IRON GIRDERS, Steam Boilers, Gas Holders and Gas Apparatus, General Castings, Chains, Cables, and Contractors' Iron Work, Manufactured by MELROSE and HUSSEY, Phœnix Works, Twidale, near Pudsey.—London Office, 78, Hatton garden.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York-buildings, Adelphi.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.
CHUBB and SON 57, St Paul's-churchyard, London; 28 Lord-street, Liverpool; 16, Market-street, Manchester; and Horseley-fields, Wolverhampton.

JOHN TANN'S new patent RELIANCE LOCK and FIREPROOF SAFES form the best and cheapest safe in the world against fire and robbery. Testimonials to be had of Messrs. Waterlow, Birchin-lane; at the Warehouse, 30, WALBROOK, CITY; and at the Works, 1, Hope-street, Hackney-road, London. Iron Doors for strong rooms and party-walls.

DARNELL'S improved PATENT LOCKS, to be had only of the Patentee, 28d, Strand, opposite Norfolk-street. These Locks are the safest and cheapest, made of all sizes, and for every purpose. Descriptions and Lists of Prices sent. A liberal discount to the Trade. Fireproof Safes, Doors, Iron Frames, Deed and Cash-boxes.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Founder's, Nails (wrought and cut), Copper and Zinc, Patent Locks of all descriptions; China, Glass, and Wood Furnishers of all kinds, with Patent Shifting Spindles; Dr Arnott's Ventilator, as fixed and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

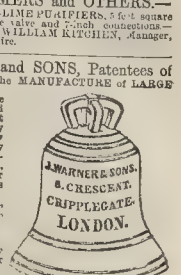
W. K. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Bank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Rimers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.



HEATING BY  HOT WATER.

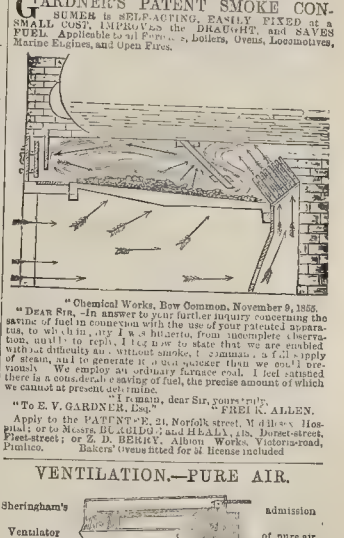
JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-house, Warehouses, &c. where they have fixed their Hot Water Apparatus. As the same is extensive operation in their Premises, King's-road, Chelsea.

SAVING IN GAS.—D. HULETT, INVENTOR and PATENTEE. The Meridian Gas Regulator is the only efficient instrument for ensuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.—D. HULETT and CO. 55, High Holborn, London, Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

TO GAS CONSUMERS and OTHERS.—ON SALE, FOUR DRY-LIME PURIFIERS, 5 feet square and 3½ feet deep, with centre valve and 7-inch connections.—Application to be made to Mr. WILLIAM KITCHEN, Manager, Gas Works, Radcliffe, Lancashire.

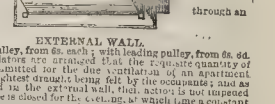
JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale.
With improved Clappers, and tuned on a new system which give superior tone and facility for ringing.



IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building.
Price from as 6d. each, according to size.
IRON GIRDERS and COLUMNS to MODEL or DRAWING.
IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O G Gutters, Sash weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with cans and bases, and every kind of build ng castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars bridge.



VENTILATION.—J. KITE, Patentee for Ventilating and Smoke-curing Operations.—Churches, chapels, schools, cabhouses, public buildings, stables, &c. effectually ventilated, upon a new and economic system. Also, the New Patent Albert Chimney Cap, for the cure of smoke. Patronised by her Most Gracious Majesty; also on Buckingham Palace; in use also on St. James's Palace, Claremont, Windsor Castle, Government buildings, &c. Wrought iron, 25s; galvanized ditto, 30s; cast iron, 35s. each, the latter as durable as the building two post-cowls a depth. KITE'S BARTON'S Ironworks and Manufactory, for the Patent Stable Fittings and enamelled Mangers.—Address, JAMES BARTON, 37, Oxford-street, London.

LESS FUEL, MORE STEAM, NO SMOKE.
GARDNER'S PATENT SMOKE CONSUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, REGULATES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 9, 1855.
"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patented apparatus, to which I am happy to subscribe, from incomplete observation, am unable to reply. I beg now to state that we are enabled without difficulty and without smoke, to consume a full supply of steam, and to generate it with much greater than we could previously. We employ an ordinary furnace grate, and feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.
"I remain, dear Sir, yours truly,
"To E. V. GARDNER, Esq." "FRED K. ALLEN.
Apply to the PATENTEE, 21, Norfolk street, Middlesex Hospital; or to Messrs. BLACKBURN and HEALD, 18, Dorset-street, Fleet-street; or Z. D. BERRY, Albion Works, Victoria-road, Pimlico. Bakers' Ovens fitted for 3l license included.

VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 186, Blackfriars-road, and 17, Union-street, Borough, and of all Ironmongers, Brass Founders, Builders, &c.

PAPIER MACHE AND CARTON PIERRE WORKS,

49, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renissance, Louis XIV., XV., XVI., and many other styles; also rich or simple Panel decorations, Elizabethan and Gothic Dados, Door Caps, Mouldings, of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS, in decorations of Drawing and Dining rooms, Libraries &c. for private houses, or public buildings, many of which they have had the honour of executing under architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent addition of steam power and machinery, enable them to offer very superior advantages in materials and speed, while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference.

PAPIER MACHE, COMPOSITION, CARTON PIERRE, AND CEMENT WORKS.

WHITE AND PARLBY

Beg respectfully to inform Architects, Builders, and Decorators, that they are prepared to execute in the above materials, all internal or external decorations, at exceedingly moderate prices. They solicit attention to their vast ENRICHMENTS of the highest class, and in every style of ornament, as suitable for the above purposes, comprising Ceiling Panels, and Pilaster Decorations; enriched Mouldings, Centres, Cornices, Trusses, Trophies, Vases, and every other requisite for the decoration either internally or externally of Houses of Public or Private Buildings, also to their Stock of Gilt Frames, Pier and Console Tables, Girandoles, Window Cornices, Candelabra, and other Articles of DECORATIVE FURNITURE & GILDING, of which they have an extensive assortment executed in the highest style. They also invite attention to their Designs for DECORATIVE SHOW-CASES, and other ornamental Shop Fittings.

CEILING FLOWERS in great variety, ready for immediate use, always on hand, at prices lower than any hitherto offered.

ARCHITECTS' DESIGNS CAREFULLY EXECUTED, AND ORNAMENTS EXPRESSLY MODELLED (IF REQUIRED).

SPECIAL DESIGNS MADE FREE OF EXTRA CHARGE

WHITE AND PARLBY, 4, RATHBONE-PLACE, LONDON.

CONTRACTORS' RAILS WANTED.—WANTED, about Eight Tons of Second-hand Bridge or other RAILS, in lbs. to the yard, of the same quantity of Inch Bar Iron.—Address, stating lowest cash price, to A. Z. Mr. H. Brooks, 2, Racquet-court, Fleet-street.

WANTED, a PAIR of WROUGHT IRON FOLDING DOORS, about 4 feet 6 inches by 6 feet: with Iron Jambs, &c. preferred. Address stating size, thickness, and price, to Mr. K. W. GRIFFITHS, 14, York-place, City-road.

212 MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non conducting and vaporizing) with all the improvements, under their Quadruple patents of 1845-54 and 1855, including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).
THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.
MILNER'S PHŒNIX 212 SAFE WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 & 7, S. Lord-street, Liverpool. London Depôt, 47A, Moorgate-street, City.—Circulars free by post.
Sold also by HOBBS, ASHLEY, and CO. 97, Cheapside.

CONTRACTORS requiring CASTINGS, WROUGHT-IRON GIRDERS &c. with despatch, and punctuality, MATTHEW T. SHAW has such arrangements that deliveries are made in a few days. Contracts for Plant and Stores of every description, 64 CANNON-STREET.

CAST IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large Stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O.G. Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings. Iron work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Price equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

MEMOIRS OF THE GEOLOGICAL SURVEY OF GREAT BRITAIN AND OF THE MUSEUM OF PRACTICAL GEOLOGY.

Now ready, in royal 8vo. price One Shilling.

IRON ORES of GREAT BRITAIN. Part I.
The Iron Ores of the North and North-Midland Counties of England.
By Dr. PERCY, F.R.S. and W. W. SMYTH, M.A. of the Museum of Practical Geology, London
London: Published by Messrs. LONGMAN and CO. for H. M.'s STATIONERY OFFICE.

NEW WORK ON CANNON FOUNDING, &c.
Nearly ready, in 4to

ON the PHYSICAL CONDITIONS involved in the CONSTRUCTION of ARTILLERY: with an Investigation of the Relative and Absolute Values of the Materials principally employed, and of some hitherto unexplained Causes of the Destruction of Cannon in Service.
By ROBERT MALLET, Mem. Inst. Civ. Eng. F.R.S. M.R.I.A. Hon. R.S.A. Scotland, &c.
*** This work will be found of practical importance to the Civilian as well as Military Engineer.
London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

Second Edition. Sixth Thousand.
Now ready, with Frontispiece and Vignette, 3s. 6d. cloth,

THINGS NOT GENERALLY KNOWN, FAMILIARLY EXPLAINED. A Book for Old and Young.

By JOHN TIMBS, F.S.A.

"Any one who reads and remembers Mr. Timbs's encyclopædic varieties should ever after be a good table-talker, an excellent companion for children, a 'well-read person,' and a proficient lecturer; for Mr. Timbs has stored up in this little volume more knowledge than is to be found in a hundred books that might be named." *Athenæum*, June 21.

By the same Author, Third Thousand,

CURIOSITIES of LONDON; with nearly Fifty Years' Personal Recollections. With a Portrait. 800 closely printed pages, 14s.

DAVID BOGUE, Fleet-street.

Just published,

ILLUSTRATIONS of the FIVE ORDERS of ARCHITECTURE.
By N. E. GREEN
Six Plates, size 21 inches by 15 inches, price 2s. 6d. each.
Adapted for the Use of Schools and Architectural Students. The Plates are so arranged as to give at one view the proportions and measurement of the order, together with a building entire and in separate parts.
GEORGE ROWNEY and CO. Manufacturing Artists' Colourmen. Retail, 51, Rathbone-place; Wholesale, 10, Percy-street, London.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for JUNE, 1856, is now ready. Price 1s.
London: HENRY GEO. WARREN, 2, Red-lion-court, Fleet-street; and GEORGE ROUTLEDGE and CO. Farringdon-street.

Third Edition.

THE BUILDER'S FRIEND,
Price One Shilling.
Office of "The Builder," and of all Booksellers.

1 Vol. Handsomely Bound. 21s.

BUILDINGS and MONUMENTS, Modern and Mediæval; being Illustrations of the Edifices of the Nineteenth Century, and of some of the Architectural Works of the Middle Ages.
By GEORGE GODWIN, F.R.S.
Fellow of the Royal Institute of Architects, &c. Editor of "The Builder," and Corresponding Member of several Societies.
With numerous Engravings.
Published at the Office of "The Builder," 1, York-street, Covent-garden.

This was price One Guinea.

THAMES REFORM. A New Plan for the Drainage of the Metropolis combined with Practical Suggestions for Public Convenience, Health, and Recreation. With an Explanatory Map.
By Sir WILLIAM WORSLEY, Bart. M.A.
London: EDWARD STANFORD, 6, Charing-cross.

HAND-RAILING SIMPLIFIED, upon entirely new and original principles,
By ROBT. RIDDELL
TRUBNER and CO. 12, Paternoster-row, Publishers price 3s.
A new system Laid down has been thoroughly tested by some of the first talent in London, and pronounced to be the most simple and only reliable guide that has ever appeared on the subject of handrailing.

LINTON'S SCENERY of GREECE and its ISLANDS. Fifty Plates on Steel, with a Tour and Map. Artists' proofs royal 4to. Four Guineas; demy 4to. Two Guineas. See reviews in Times, Athenæum, Art Journal, Literary Gazette, Herald, Leader, Builder, Observer, Globe, &c. &c.
W. LINTON, 7, Lodge-place, St. John's Wood-road; LONGMANS, Paternoster-row; TRUBNER and CO. Foreign Agents.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo price 8s. neatly bound.
London; published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.
Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING. Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 33s.; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING revised by TREDGOLD, both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the use of workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and numerous Wood cuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Directions for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 30s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 30s. boards.

6. THE HOUSE DECORATOR and PAINTERS' GUIDE containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARLESHEIM, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 33s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual specimens of Hand-brush Graining and Marbling. Ten Parts, at 3s. or in boards, 33s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture in the British Empire. Illustrated by upwards of 2000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important changes since the first publication, in 1836, of the Encyclopædia. The Inventions and Discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was at once duly prepared. By the insertion of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, as the work of reference in vogue." In two large volumes, strongly bound, price 36s.

Forwarded on receipt of thirty postage stamps,

ARCHITECTURAL BOTANY; setting forth the Geometrical Distribution of Foliage, Flowers, Fruit, &c. with twenty Original Designs for Decorating Cornices, Spandrils, Crosses, Corbels, Capitals, Bosses Panels, &c.
*** Part II. nearly ready.
By W. P. GRIFFITH, F.S.A. F.R.I.B.A. &c. 9, St. John's-square, London.

TO ENGINEERS, ARCHITECTS, and SURVEYORS.—TO BE DISPOSED OF, by valuation or otherwise, the STOCK of INSTRUMENTS of an ENGINEER and LAND SURVEYOR, recently deceased; comprising valuable transit theodolite, with circumferentor in bronze; Sims's 16-inch dumpy level, with tangent screw; large box of instruments, rantographs, protractors, levelling staves, mounted and tracing papers, and every requisite for an engineer or surveyor's office. Any gentleman in the profession will find this an excellent opportunity of furnishing himself, as the proprietor is willing to dispose of them at a great sacrifice.—Apply to Mr. KILBURNE, Hawkhurst, Kent, who will be willing to give any information, and treat for any portion of the stock.

LEVELLING, Surveying, Drawing, Mapping, Estimating, for Railway or other Works; Enlarging, Reducing, Copying, Tracing, &c. undertaken by Mr. C. B. RICHARDS (late an Officer of the Metropolitan Commissioners of Sewers). Surveyors to the District Boards of Works, or Local Boards of Health, will find him a useful auxiliary, from his experience in all the details of Sewage Works.—4, Trafalgar-square.

TO ENGINEERS, SURVEYORS, ARCHITECTS, &c.—A REGISTRY kept of Surveyors, Levellers, Architects' and Builders' Assistants, Clerks of Works, and Draughtsmen, requiring EMPLOYMENT. Efficiency ascertained before recommended.—Apply to Mr. C. B. RICHARDS, Engineer and Surveyor, 4, Trafalgar-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading and Tinting; Ornamental and Working Drawing; Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms:—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

LITHOGRAPHY.—Every description of Maps, Plans of Estates, Engineering, and Architectural Drawings, Bill Heads, Circulars, &c. executed with despatch, at C. MOODY'S Drawing and Printing Offices 257, High Holborn.
N.B. Artists supplied with every requisite for Oil and Water-colour Drawings, &c.

FOR SALE, a PULPIT, in the Gothic style, is in very good condition; erected a short time since by Messrs. Cubitts, Gray's-inn-road, with a slight alteration might be converted into two. For sight and particulars, inquire of Mr. THOS. GENN, Carpenter, North road, Highgate.

MECHANICAL and ENGINEERING COLOURING CLASSES, conducted by Mr. FREDERICK WOODALL, at 26, Wardour-street, Oxford-street, and 26 Clarence-road, Kentish-road. Prospectuses to be obtained at either address.

MONUMENTAL BRASSES, SEALS, DIES, &c. in Mediæval and modern styles.—T. MORING, Engraver and Heraldic Artist, 44, High Holborn.

ENGINEERS' and MACHINISTS' DRAWING CLASSES, conducted by Mr. FREDERICK WOODALL, at 26, Wardour-street, Oxford-street, and 26, Clarence-road, Kentish-town. Prospectuses to be obtained at either address.

N.B.—Special classes for colouring.

PELICAN LIFE INSURANCE COMPANY, established in 1797.
70, Lombard-street, City, and 57, Charing-cross, Westminster.

DIRECTORS.

Robert Gurney Barclay, esq. | Kirkman D. Hodgson, esq.
William Cotton, D.C.L. F.R.S. | Thomas Hodgson, esq.
John Davis, esq. | Henry Lancelot Holland, esq.
William Walter Fuller, esq. | Benjamin Shaw, esq.
J. & A. Gordon, M.D. F.R.S. | Matthew Whitbu, esq.
Henry Grace, esq. | M. Wyvill, jun. esq. M.P.

NOTICE. In order to remove any apprehension that might be entertained as to the perfect security of the Policies granted by the PELICAN LIFE OFFICE, the Directors have omitted every clause that would render them void by reason of any error in the Statements made by the Assured before or at the time of effecting an Insurance. No erate rates of premium with participation in profits. Low rates without profits.

LOANS, in connection with Life Assurance on approved security.

For prospectuses and forms of proposal apply at the offices as above, or to any of the company's agents.

ROBERT TUCKER, Secretary.

The Builder.

VOL. XIV.—No. 700.

THE learned Smelfungus, who travelled from Boulogne to Paris—from Paris to Rome—and found all barren;—Mundungus, who made "the whole tour,—going from Naples to Venice—from Venice to Vienna—to Dresden, to Berlin, without one generous connection or pleasurable anecdote to tell of,"—such characters would personify the opposite to the happily-constituted architect. It is indeed little *comparatively* that can be learnt in any single school. But, as the delightful writer from whom we have quoted, elsewhere says,—"What a large volume of adventures may be grasped within this little span of life by him who interests his heart in everything; and who having eyes to see what time and chance are perpetually holding out to him as he journeyeth on his way, misses nothing that he can *fairly* lay his hands on!" There is, we believe, an organ recognized by phrenologists, in which they assert resides a distinct faculty,—that giving aptitude for *taking notice* of objects. This surely is the faculty which is the very first for every ARCHITECT to possess,—for, without it, power to apprehend dimensions, and relations of form and colour, and power of memory would be of little avail. None there are perhaps, at this time, who would travel from Dan to Beersheba, and cry, "Tis all barren,"—yet are there any who like Smelfungus—coming out of the Pantheon—would speak slightingly of some noble relic of a particular school of art? For such unworthy sons of architecture we have little sympathy.

We should have nothing to show of remnants of classic art, and little just now in the way of mediæval antiquities, in the locality which we would herein visit with the reader. Yet, we may find much that is interesting in connection with architecture, if not something which would claim to be looked at in forming opinions upon some controversial questions.

At this time of the year in London—when heat, smoke, and dust, conspire against body and spirit,—when the noisome stench of the river is reviving,—whilst we are told that the alternative of poison left, is, whether we will *drink* or *breathe* it, health and invigorated faculties at least may be found within a moderate distance. Our *route* will take us to the neighbourhood of Reigate,—to a district interesting for its natural beauty, its geological formation, and the variety of building materials to be found, and for much that is creditable in its recently-built houses, or picturesque in its older domestic architecture.

The county of Surrey—extra-metropolitan—stands lowest in mortality as compared with the rest of England; and not many years ago, in one of the reports on public health, the town and district of Reigate were specially referred to. In consequence of this reference, the place has had a considerable accession of inhabitants, and at the period of the late outbreak of cholera at Croydon, many members of the Society of Friends removed from the one town to the other. Reigate stands in the valley between the range of hills called the North Downs, and the sand hills which are found near them, at various points of their attendant strata in the chalk formation. The range of chalk hills extends from east to west throughout the county, and beyond it, and passes by Guildford, Dorking, and Merstham. The principal elevations of the sand formation are the celebrated Leith Hill, south-west of Dorking, and which is the highest in Surrey, and the range south of the town of Reigate. The principal elevation here, has for its summit a broad plateau, half a mile in length, from which there is a magnificent view to the chalk hills, beyond the town, on the north, and over a wide range of Surrey and the Wealds of Kent and Sussex in the other directions. Looking north, the foreground formed by the trees and the ravines of Lord Somers's park, seen with the broad shadows from a setting sun, forms a combination such as may not be found in any other country in Europe. A prominent object in the valley is the "Castle-keep," which, however, consists of a mere mound of earth, with a modern gateway, the mound having, at the base, on one side, a deep dry ditch. A piece of water known as "The Moat" also exists in some grounds adjoining the castle, but is on a higher level than the castle moat. Leading down from the summit of the castle mound is a descent by steps, ending in a large excavation, which passes under the name of "The Barons' Cave," and is said to be the place where the barons agreed upon the articles of Magna Charta before presenting them for the signature of King John, at Runnymede. But we cannot undertake to say that there is any foundation for the story. The place may be seen for a "backsheesh." There are other curious excavations under the town: these, at least, appear to have been merely sand-pits.

Amongst the beautiful views in the neighbourhood may be mentioned that which bursts upon you, as the top of the hill north of Reigate is reached, approaching by the Sutton-road; one from the tastefully-arranged gardens of Mr. Hackblock's house; and others from various points along the chalk range. Redhill, by "the junction" of the Brighton, and the South-Eastern and Reading and Reigate lines, is part of the range of sand hills. The view from it extends far into the county of Kent. At the first approach from the town of Reigate, the effect is aided by the church spire seen over the crest of the hill, as an object in the foreground. This church was a building of note a few years ago, when the details of Gothic architecture were not so well understood as at present. The ribs of the spire, apparently in cement, seem to be quickly perishing. The manner in which some of the early revived-Gothic churches were designed, was not always without merit. The support for the spire, formed by buttressed angle piers and arches in place of the ordinary base of a tower, might yet be worked out better than it has been. Amongst other places in the neighbourhood, Gatton, where there is a church and a beautiful park, may be mentioned. Before it fell into schedule A. of the Reform Bill, two members were returned to Parliament, by a few score of inhabitants, or, mayhap, as in the days of Bottom the weaver, somebody 'presented a wall, as report says was much the case at Old Sarum,—although Manchester and Birmingham were unrepresented. Reigate, which now returns one member, formerly sent two; and Bletchingley, which lies some three miles and a half east of the Redhill Junction, also sent its two members. Bletchingley is interesting for its remains of domestic architecture, its church, and other antiquities; and here a Roman hypocaust was discovered in 1813. Nutfield church, on the road to Bletchingley, is also an interesting building: Merstham Church, 2¼ miles north of the Junction, is still more so. Reigate church is chiefly "perpendicular," but has a few portions of earlier date, as the nave-piers, and arches. The piers are alternately circular and octagonal. The east end has been restored under Mr. Woodyear. A good reredos and sedilia were discovered a few years ago; and the church contains a "perpendicular" rood-screen, encaustic tiles, and a monument to the Lord Howard of Effingham who was concerned in the defeat of the Spanish Armada. Indeed, other objects of antiquarian interest may be found within very short distances of Reigate; and, for beautiful scenery, the neighbourhood of Dorking, and the valley of the Mole beyond Box Hill, are seven or eight miles distant. The picturesque features of the old domestic architecture, however, should not be passed over. High pitched roofs, and effective chimney shafts, and the use of tiles in ornamental patterns, and sometimes varied in courses, which sometimes both cover the roof and form the enclosure to the upper story—now form the common appliances, handed down in the locality from previous times. Of the seventeenth century iron-work, some capital specimens are to be found. The opportunity for imparting a pleasing character to the architecture, is greatly aided by the fortunate position of the place as to available building materials. This characteristic originates with the geological formation. Passing on the Brighton line from London, we cross a descending succession of the strata, which "crop out" at various points. Geologically under the Bagshot sand, London clay, and lower plastic clay, the chalk formation begins a little beyond Croydon. The chalk formation comprises these divisions,—as they are placed by Dr. Mantell, whose works form the great authority on the geology of the south-east of England*:—

1. Upper chalk, with flints.
2. Lower chalk, without flints.
3. Firestone { Chalk marl. / Upper green sand, or glauconite.
4. Galt, or Folkstone marl.
5. "Green sand," Shanklin, or lower green sand.

These strata terminate a little south of Reigate, to be again intersected by the railway further south. They form a figure on the geological map approaching that of the letter C. The strata next to the green sand are the Weald clay, and the Hastings sand and Purbeck beds. The marl is an argillaceous limestone pretty constantly found underlying the chalk: the lower beds contain a large intermixture of green sand, and form the coarse calcareous sandstone called "firestone." The chalk and marl are seen to best advantage in the deep cutting at the entrance of the Merstham tunnel. The "hydraulic" properties of the Merstham lime, and that of the same formation, are due to the argillaceous intermixture. When Colonel, now General, Pasley made his experiments, he readily produced artificial hydraulic limes by imitating the natural combination.

The firestone is used as the chief building stone of the neighbourhood. Amongst the old instances of its application is mentioned that by Cardinal Wolsey at Hampton Court Palace. It is not generally considered to be suited for tracery and decorative work, though we are told that Mr. P'Anson has lately so used it at Lindfield church. Caen or Bath stone for such purposes is preferred. But for many purposes the firestone answers well. When first quarried it is dark coloured; but, drying to a beautiful white, it tells with excellent effect, as applied in some houses at Reigate, where used as quoins to the walling of the ordinary Nutfield stone, which is of a yellow, and sometimes of a dark brown or slaty colour. The Galt supplies good brick earth, and the "lower green sand" affords sand and stone, with occasional beds of chert and fullers' earth. The fullers' earth is got at

* See "Geology of the South-east of England," "The Wonders of Geology," "A Day's Ramble in and about Lewes," "Thoughts on a Pebble," and the same author's contributions to "Bragley's Surrey."

Nutfield, whence it is conveyed to the woollen districts of England. In days gone by, a railway between Merstham and Wandsworth helped in one part of the carriage. In 1805, an experiment was tried to see how much one horse could draw on the railway, and thirty-six tons having been taken six miles in an hour and forty minutes, the wise men of the day affirmed that railways were things that could never be worked with profit. The Nutfield stone is used for ordinary walling very generally; and the schools at Reigate, by Mr. Clutton, are built of it.

Few localities, however, will be found with the same varied application of building materials. In the principal Gothic houses, the red brick and stone dressings are employed. For roofing, the red and stained black tiles are commonly used. The schools are roofed with grey tiles, brought by railway from Ashford; whilst the original covering of the church is of heavy stone slabs.

In the argillaceous beds of the Weald, bands of ironstone are found; and up to 1720, the chief iron manufactures of England were in Sussex. The decrease of the requisite fuel—wood and charcoal in this case—is said to have been the reason why the source of supply was transferred to the coal districts; but up to 1827 a furnace was in operation at Ashburnham. From the Weald also is procured Purbeck marble.

The green sand being the chief of the water bearing strata, Reigate is supplied with excellent water by wells, sunk from 20 to 40 feet deep. On the north side of the town, water is reached at greater depth,—sometimes at 70 feet. A band of iron-stone a few inches thick runs through the strata: and when the water is not found above this, experience shows that the well may have to be sunk much deeper. A depth of 150 feet is occasionally required. At the Feathers Inn, at Merstham, the well is said to be 210 feet deep, passing wholly through clay and marl; but there, a copious supply was reached at 60 feet, and now rises to a somewhat higher level. We apprehend that the collating of a few such facts may one day again be important in connection with the water supply of London.

The absence of a more copious supply for the town of Reigate, however, interferes with perfect success in the house-drainage. There is a sewer along the main street, which takes the road-drainage. Most of the houses in the town are connected with the sewer, but retain the original cesspools,—the overflow only passing off; whilst the houses lately built generally depend upon cesspools only. In cases where the system of perfect drainage into the sewer is sought to be carried out, it is found that the street becomes offensive,—so that, from the want of facilities for flushing the sewer, the abolition of cesspools is not encouraged. The whole question of the sewerage and water-supply deserves re-consideration, though the healthfulness of the district may at present remain. During the prevalence of the cholera, it is said that no case occurred at Reigate. We are told that the well water does not generally get contaminated, and that in the exceptions, the defective cesspool, when discovered, is soon altered. This, however, seems to us to admit the main case,—a single cesspool being sometimes productive of a large amount of mischief for years, before its state is discovered.

It cannot be too well considered in the case of new, or rapidly extending towns, that the whole question of sewerage and abolition of cesspools turns upon the position and sufficiency of outfall, and the complete removal of the contents of the *sewers* to such point, at least. But even here the inquiry does not stop. In short, there is a preliminary question,—only held over in the case of London, from the apparent peculiar impracticability of immediate solution. A commencement has, however, been made at Reigate in the utilization of the sewage; and though, as partly will have appeared, even there the evidence is incomplete, every experiment of the kind at such a juncture demands at least a notice. But, we are assured that a much larger quantity of sewage—as from increase of houses, and the better working of drainage—could be employed profitably on the land which now receives a supply. This land consists of a portion of the Priory Farm, taken by Mr. Wythes, the well-known contractor, from Lord Somers, at Michaelmas, 1854. The portion now under irrigation—about thirty-five acres—in 1854 was mere moor land, bearing rushes, and of little value. It is now becoming covered with rich grass and clover—though no seeds have been sown—and, in this the first season for fairly testing the operations, is obviously of considerable value for pasture. The land is to the south-west of the town, and adjoining the Heath; and the sewage formerly found its way through ditches, marked as branches of the Mole on the Ordnance map, and ran for two or three miles on to the main course of the river. The sewage is now intercepted at the main outfall, or at various lower points, by sluices, and turned aside into branches intersecting the land, from which the distribution is effected simply by other branches called "gutters," over the edge of which the liquid is allowed to flow laterally, and spread through the roots of the grass. It seems open to consideration whether this simple mode of distribution, though possibly the means of benefit to the health of the district as contrasted with the previous arrangement, is the best that could be carried out. In other cases, where similarly simple means have been adopted, it has been argued that injury resulted. At Rugby, for the distribution over Mr. Walker's farm, iron piping, jointed with lead, is provided; and elsewhere the operation is completed by stand-pipes or canvas hose and spreader-jets. These, however, are points which need not be gone into further at present; and the land in question is not such as will be likely for some little time to be approached much nearer by the populous part of Reigate. It is, however, to be noted as curious in physiology, that cattle will drink sewage water sometimes in preference to that at their regular drinking-place. This is said to arise not from any absence of preference for the pure over the impure water, but from the coldness of spring water, which is distasteful to them. But a horse has a more delicate taste. Cattle could be pastured within a fortnight of the time of irrigation.

The question of water supply is important to all parties. In dry seasons we apprehend that neither are the original ditches relieved, nor can Mr. Wythes's operations be continued. With reference to the relative proportions of land to receive sewage, and sewage to be got rid of, it seems that there is a limit which would be speedily reached in the instance of London, even in the Essex marshes, which have a description of soil that will take an unusual quantity. Mr. Wythes's land might take three times the present quantity, or more: but if the irrigation be excessive, or the sewage matter in great strength, grass is forced too fast (as shown here in spots close to the places of overflow), and the cattle will leave it. The question whether gain rather than loss might not be made to result through this rapid development, did not appear to be answered; for, although two crops of hay in the course of the year may be the most that the seasons will allow, there would seem to be the alternative of turning on more cattle. Doubtless, however, these are points which could be settled by persons more familiar with agricultural operations than we claim to be. But they seem to us points of some moment in reference to utilization of the sewage of London. The *drainage* of Mr. Wythes's land is effected by 2-inch piping, leading into open ditches. The pipes are laid at a depth of 4 feet, and about 25 feet apart. The latter distance, adopted for convenience, is greater than what might have been chosen otherwise. No general rules should be laid down without reference to the soil. Thus in clay, the drains will require to be comparatively close. Depth, even exceeding that adopted in the present case, is desirable in land drainage. With drains at only 18 or 20 inches, which, according to Mr. J. B. Denton, have been used at Aldershott, land "regains its wetness in a few years."

As to the commercial question involved in the application of sewage, it would, perhaps, be premature to hazard an opinion in such a case as the present. Nevertheless, the improvement in the quantity and quality of the grass is such, that it is thought in another year the land will be worth four times its former value. There is no engagement between Mr. Wythes and the town as to the future,—as the natural outfall is simply diverted; and it is thought the town could not divert in any different direction. At Rugby, Mr. Walker has a lease of the sewage for twenty years,—paying for it 50*l.* a year. But we hope Mr. Wythes will receive the full benefit from his enterprise. The same sewage-water has been used on arable land, by means of a manure-cart, with great advantage. Road-scrapings and ditch-earth, where saturated with the sewage, are highly valuable as dressing to crops. The main sewer at Reigate, we may remark, though well built, is said to be put in at too high a level for Lord Somers's house (the Priory), so that parts of the house have been liable to get flooded.

The number of houses commenced round the town within a very recent period, has been considerable. Much of the work, however, got into bad hands; so that many of the houses have been standing for some time unfinished. The chief of them are now in course of completion.

We have no particular wish to set the London speculative builders to work in the neighbourhood; for, indeed, what can be done at Reigate, in character of art, seems to be much in advance of what is done in the immediate suburbs of London. The principal exceptions may be found on two estates of freehold land societies, south of the town. At Redhill Junction, also, where a new town, called Canning Town, has risen, the *laying out* and the general taste are of a low order. But, north of Reigate, where the chief building has been going on, not only are the houses distributed, so as to preserve the trees and the beauty of nature generally, but in the designs themselves there is considerable taste. A similar remark would apply to several large houses, as those in the Tudor style—one belonging to Mr. Compton, designed by Mr. Clutton, and another with effective tiled roof by Mr. Parnell, and to an Italian villa on the Heath, and others. Mr. Clutton was the architect of the schools, which are built of the Nutfield stone. One of the largest houses recently built is that of Mr. Roslin: it is in the Italian style, and generally excellent in character. Indeed, both arising from the materials and the design, there is extraordinary variety of character at Reigate; and one who wanted to cogitate over the questions appertaining to the great question, "Classic" *versus* "Mediæval,"—to wit, whether one or the other is best fitted for the eduction of *art*,—which is most consistent with modern ideas and comforts,—or whether both might be taken up and laid down just as whim might dictate, would find many practical suggestions and exemplifications, albeit he might get not farther than the cautious judgment, that "much could be said on both sides." *A priori*, it should seem, that contrast by regular forms with the forms of nature, would be the aim we ought to hold in view, and that, consequently, those styles in which regularity of form and proportion is the principle, would go to make the best combination. Regarding character of style in our time, the Italian style, or something nearest allied to *it*, it must be observed, maintains its hold. With all the talent which has been exhibited, Gothic architecture is not yet the style of the majority of houses and public buildings. If it appeals from the exterior of a house, it sits uneasily within; for, not even in the most "consistently" decorated and furnished building—even the Houses of Parliament—can you be blinded to some interloping thing, which tells that the world without is still not going any-ways mediævally. The course in art, as in all things of knowledge and intellect, once entered upon, is as that of a barbed hook. It *may* be even nearer to go back; but pull that way, and it rends you; but push on and you get a long distance and with little detriment. We do indeed, now, hear less of the merit of standing *on the ancient ways;* and the aim of classicists and mediævalists we will now take as one,—viz. the eduction of new art. The emancipation, however, should be complete; and words are sometimes let fall at evening meetings—less by architects than architects' "patrons,"—which raise in us misgivings. Beyond that remark, we may say that indeed (as we have said often), particular style chosen is of less consequence, than that for the sake of

public appreciation of *architecture*, there should be but one general style; and the main point, therefore, will in such case be,—how is this soonest to be reached?

Still is there something in the character of recently-built houses at Reigate (the majority of which have Gothic features) which seems to harmonize well with the scenery. And the roofs, eaves, chimneys, and porches have, in new houses as in old, that importance preserved to them which should be ever found in domestic architecture; and perhaps, after all, it is because these things were, during many years, neglected in versions of Italian architecture by those who were thinking too much of precedent, that a prejudice which need by no means pertain to new works, or to mere style, belongs. The Reigate architecture seems mainly due to local men, who have studied the old buildings of the neighbourhood, put forth some effort, and have known how to use their resources in materials. There are a few buildings in starved Italian, carpenter's and cement-man's Gothic, and other nondescript styles,—some which are "picturesque," rather than durable and weather-proof, and some otherwise good designs which fail in the barge-boards. But the place generally deserves a visit.

When Mr. Felix Summerly went on his excursions some few years ago, he happened, at Reigate, to come near a clean-looking *hostelrie*, called the White Hart. Whereupon having called for a toothpick, mustard-pot, and some such light articles, and finding the diagnosis of the mustard-pot promising (a test which we take leave to say had been one of ours ever since we practised peripatetic eating), he was emboldened to order a stuffed chicken, and came back to it and ate with appetite. Whereupon, still mindful of the toothsome flavour, and having "judicious drank," he sat down to immortalize mine host, and send guests to his larder,—not, however, without threatening instant impalement in case of any dereliction from the moderation of his charges. Whether Mr. Cole's friend did wisely stand upon his "ancient ways," we know not, but he did leave the scene of his ministrations with cash in pocket. What may be the genius of the place now, also we know not; but the "exterior perspective view" is still clean and comfortable looking; and those who may not have the best of friends at Reigate, or who look to find their—

"* * * warmest welcome at an inn,"

we should think may, "nobly daring," call for stuffed chicken, on strength of the traditional repute of the White Hart.

ON THE DOMESTIC BUILDINGS OF WESTERN FLANDERS IN THE SIXTEENTH CENTURY, ILLUSTRATING THE ORNAMENTAL BRICKWORK OF THAT PERIOD.*

THE population of Bruges was formerly over 200,000, but now it is not one-fourth of that number; and from its frequent sieges, and the destruction of its cathedral and many churches and religious houses towards the close of the last century, gardens of great extent are attached to many houses in the town. Two other square fronted houses of later date are equally decorated, as those before-mentioned, though differing in character. The basement is of stone up to the windows, the upper part of red brick moulded in the arches and jambs, and the ornaments are panelled, fretted, or reticulated, all of varied patterns. The parapet is embattled, and over each pier is a corbelled turret decorated like some of our Elizabethan chimney-shafts: the upper parts have been destroyed. Over the arches are inserted white stone medallions. This building, and another in the Rue Neuve opposite, are called the Spanish Houses: both are covered with terraces or lead flats, and have their beam "ankers" in the piers.

On this square stands the great belfry, or as it is now called "Tour de la Halle," built of brick in 1291. The quoins and some of the mouldings, the hexagonal pinnacles of the upper stage, the angles of the upper octagonal stage, the small windows, belfry jambs, and the arches are of stone: the masks or salient angles, and the body with the recesses and some of the tracery, are of brick.

Of the form of the original termination there is no account, but after being struck by lightning in 1492, it was decorated with a wooden bulbous-formed composition, which was again destroyed by a storm in 1741. It was then covered with a common low-pitched roof till 1824, when pinnacles and a parapet were added.

This tower was at first insulated, but in 1364 the large hall surrounding it was built by the cloth merchants for their market-house, in which the annual fairs are now held. The tower is about 300 feet in height, and with that of the Church of Notre Dame, 360 feet high, may be seen from the sea on approaching the port of Ostend. The belfry contains four octaves of bells, varying from 23,000 to 28 lbs. in weight. The apertures are open, and the bells visible: they are firmly attached by the head to oak frames, and are struck on the external surface by hammers connected with levers balanced by weights, and raised by strong wires also acted upon by metal pegs inserted in a large copper cylinder, turned by a weight which is wound up daily. Four airs are set upon the cylinder, one for each quarter of an hour: these are generally changed once in three years. On Wednesdays, Saturdays, and Sundays, from noon till one o'clock, modern airs are played on the bells by a professor of music, who strikes keys properly balanced. These chimes or carillons, which are said to be the finest in the world, were invented in 1469 by a native of Alost, near Gand, and first introduced in this tower in 1503 by Simon Waeghenlis, of Mechlin. The bells were recast in 1675 by Melchior de Haese, of Antwerp, and again after the fire in 1741 by Georges and Jacques Dumery. They remain in very perfect condition, though exposed for more than a century to the action of the weather. In 1805, when preparations were being made for a descent on England, being a *détenu* in the town, I could see with a telescope our English blockading squadron from this belfry.

Crossing the Grande Place to the Rue Flammande, there is a curious front, rising from a central pillar and corbels which project 2 feet from the end walls: all is brick excepting the pillar-shaft, brackets, key-stones of the arches below, and the huge crockets and ornaments on the coping of the gable, which are of Ecaussines stone. Continuing by the Quai des Augustins, and passing several of the same class of houses, at the corner of the Rue Espagnole, is a double-gabled house bearing the date 1596 in front, and on the Quai de la Main d'Or adjoining (on the site of the India House and doubtless a portion of it), is a building with the corners bevelled off for brackets and canopies to contain statues of saints, many of which have been reinstated: the recesses are richly moulded and contain pillar bases, but the roof has been recently modernized, the gables, arches, and tracery removed, and a wooden cornice substituted. This will give an idea of the general style of modernization now in progress. Opposite this building are two very singular gables: the recesses are moulded, and contain pillars with capitals and bases. Leaving these buildings by the Place des Orientaux (now Wednesday Market), we arrive at the Place de l'Académie. The Academy of Arts is a doubtful restoration of the fourteenth-century hall burnt 1755, but near to it is the sixteenth-century Weigh-house, for regulating the town dues, or "Octroi." The steps, columns, arches, and tracery, with the curious recessed window, are of stone, but the warehouse portion of the building is of brick: within sight of this building are nearly a dozen others of the same class, and the old Exchange is a fine specimen of a hall of the fourteenth century. On the "Quai-long," bordering the canal, which passes through the town and unites those of Gand and Ostend, is another good example of this class of houses. In St. John's-street, among several others, one is selected for the curious line of junction of the arches; and in the Rue des Pierres we find a very lofty gable covering five apertures in width. At the back of the "Palais de Justice," communicating with the old Corporation Hall, or "Maison des Francs," which contains the celebrated carved chimney-piece, in stone, marble, and oak, is a curiously ornamented brick gable, so situated that it can only be seen from a private garden, from which an arch leads to a vaulted basement under the hall, the front of which, with curious angle turrets springing from corbels, faces the canal of the Fish Market. The high-pitched roofs are covered both with pan and plain tiles. Most of the roofs are lighted by glass tiles of the same form and thickness as those of clay: they have been used for ages, as well as the conical ventilators, which are made to fit to both plain and pan tiles. The general character of the buildings is not confined to the vicinity of Bruges, for there were many of the towns proportionately opulent which are now equally reduced. All these houses were most substantially built: both the external and partition walls were of great thickness; the cellars invariably vaulted, the arches in many instances formed of accurately-radiated stone and hard burnt bricks, usually set in tarras. In many of these houses plaster was entirely omitted, the walls being lined from the floor with panelled oak wainscoating or dado upon battens over trellis, upon which strong canvas was nailed, which was covered with stamped, gilded, and coloured leather, often tapestry, and even oil paintings. The floor-beams were frequently carved on the underside. In the tapestried rooms, jib-doors, with concealed hinges and spring latches, were well contrived so as not to interfere with the design. The windows (from their cross-bars called croisées) are of considerable antiquity, and in many cases coeval with the buildings; they open on hinges both outwards and inwards, and sometimes slide and fasten by side bolts or iron pins. Sash windows are unknown.

In the fine old fortified frontier town of Ypres (now in course of dismantling), which contains but a tithe of its former population, the same general style of domestic architecture prevails. I was struck with the fine proportions of a lofty house built entirely with Ecaussines stone, and on inquiry ascertained that it was called "La Maison des Templiers," being a portion of the buildings belonging to the Knights Templars, erected in 1250. The remains of the corbelled turret are hexagonal on plan, and the tracery of the upper windows varies. This town contains a magnificent town-hall of the fourteenth century, 430 feet long in front, with a large corbelled pinnacle at each end, and a grand central tower, with corbelled pinnacles at each angle, and a spire. The brick church of St. Peter has corbelled, polygonal turrets at the angles of the transition Norman tower, and curious square projections on each side for staircases, which rise from the ground. The body of the church, rebuilt with brick in the fourteenth century, is 250 feet long and 90 feet wide.

The cathedral of St. Martin is a fine thirteenth century structure, with transepts and a grand western tower: a spire begun at the end of the fourteenth century is still incomplete, and some of the angle crockets remain within an enclosure on the north side as they were left by the workmen. Another fine (fifteenth century) church is St. Jacques', and there are several monastic buildings of later date. The towns of Commines, Wervick, Menin, Courtrai, Roulers, and Thourout, with many others, contain large brick churches, and their brick buildings present the same general features as those of the capital,—Bruges.

Now, inferior brickwork and stucco are coming into fashion and superseding the fine old realities: on the Quai Saint Walburge, in Bruges, I recently observed that a large old building, used for many years as a cavalry barrack, was being prepared for the Athenée, or public school of the town. The basement appeared to be of granite, but on approaching to ascertain whether it was granite or Ecaussines stone, I was surprised to find it only one inch thick,—a mere plaster imitation; this too a public work conducted by l'Architecte de la Ville!

All modern buildings are of the same character: plaster fronts, wood or plaster cornices, are rapidly superseding the old gabled realities, and compo is there, as here, the genius of the age; plaster and paint imitating whatever modern taste, or the want of it, requires.

All these old buildings in their picturesque

* Read by Mr. Chantrell, at Institute of Architects. Sess.

variety, with sufficient light and shade, required not the aid of colour to improve them, and the Spanish as well as the Gothic traceried elevations might suggest an idea for improving the style of decoration in our street architecture without having recourse to mere copyism. Brick, no longer subjected to an excise duty, might be moulded to any form required by the architect; arches, semicircular or segmental, thrown over apertures unlimited in extent, and window openings made of adequate size for the admission of light and air, with every comfort that the most sanitary measures could demand: ornament might also be introduced in a similar manner, and skylines formed of great variety with brick (when the expense of stone precluded its use), properly set in cement, which ought to be capable of resisting the effects of rain, so that we might have dry and durable houses. The great difficulty arises, not from want of skill or good materials, but from the admixture of inferior and improper ones by the speculating builder, who, though he professes to build cheaper than the architect, will ultimately prove more expensive to the unfortunate owner, who is deceived by the flimsy cloak that for a time covers the rottenness beneath it.

The Chairman (Mr. G. G. Scott, V.P.), at the close of the paper, observed, with regret, that the great towns of Belgium had sunk from their former commercial importance into comparative decay, and that "compo" was every day detracting from their architectural interest. It would be most desirable to have the ancient buildings of Belgium fully illustrated by measured drawings: for street architecture, these buildings furnished a most valuable field of study. The brick buildings of Italy and North Germany were better known than those of Belgium, probably because the latter were in remote towns, at a distance from the main lines of railway. Thus, from Calais to Ypres, all the little towns were full of beautiful specimens of brickwork, both in the churches and houses. He might say that there were four great brick districts in Europe—1. some parts of England, particularly Norfolk; 2. Belgium; 3. the North of Germany; and 4. the North of Italy; each of them deserving of attentive study. There were also three sizes of ordinary bricks. The size now used for ordinary commercial purposes, being that which could be most easily handled and laid, would always prevail, but there were two other sizes. In the north of Germany they had not only a brick of our own ordinary size, and one about 7 or 8 inches long by 1½ inch thick, but also an enormous brick used for buildings on a magnificent scale, being more than 1 foot long, 3½ inches thick, and 6 inches wide. These were used with great effect in churches, city gates, &c. With regard to brick bond, the chairman observed, that at Richborough Castle bricks were used at certain intervals to bond together with flint rubble, over the face of which they were in some cases made to turn down. As the restrictive duty on bricks had been removed, it seemed absurd that architects should have gone on for four or five years without any application (except in a very few instances) of moulded bricks to ornamental uses. The misfortune was, that they never prepared their working drawings long enough beforehand to give time for making moulded bricks. A great deal might easily be done, not only with moulded but with cut bricks, of which some beautiful specimens might be found in the sixteenth century buildings about London. Bricks fit for this purpose could be obtained not far from the metropolis, at Hedgerley and Chalfont. The moulded bricks on the Continent were often glazed with a green or black glaze, which gave them a very rich effect. At Lille there were some bricks with a bright green and a bright yellow glaze.

Mr. M. D. Wyatt, in reference to the manufacture of glazed bricks, said that the difficulty appeared to be to find a glaze which would expand and contract in the same ratio as the brick itself.

Mr. Jennings, as to the English cut bricks of the sixteenth and seventeenth centuries, observed that they were all kiln burnt. Modern bricks were very unequally burnt, and besides the inferiority of the material, it would be more expensive to cut them for ornamental work than to employ stone. He referred to some beautiful cut brick capitals, about 200 years old, where it was evident the bricks had been built up first and cut afterwards. There would be no difficulty in getting bricks of any form or size if the demand for them existed; but brickmakers justly complained that they would not be able to get rid of any new forms or sizes.

Mr. Pocock concurred in the opinion that the adoption of moulded bricks depended entirely upon the time necessary for making them, and not on the extra expense. He knew a case occurring within the last few days, in which a gentleman had been obliged to abandon the use of a particular form of brick which he particularly desired, because he was told that it would take six weeks or two months to make them. Unless architects allowed the necessary time, there was not much chance of moulded bricks coming into use again. Mr. Pocock added, that the rosettes in the metopes and the mouldings of the well known house in St. Martin's-lane, had been cut after the bricks were laid.

Mr. Donaldson remarked upon the singular fact that in the Belgian works the tracery was generally placed in the solid panels, and not, as in England, in the heads of the door and window openings. It would be very interesting to know exactly the manner in which this brickwork was put together, and particularly whether two or three original types only were employed, and applied in different ways, as in the Moorish style, or whether the bricks were put up in rectangular forms and cut afterwards. He hoped Mr. Chantrell would investigate this point during his next annual visit to Belgium. Before moulded bricks could be successfully employed in England, it would be necessary to train a class of workmen for the use of them. The smith's work of Belgium, briefly referred to by Mr. Chantrell, was of great excellence, and had been ably illustrated in the works of Mr. Haghe and Mr. Digby Wyatt. Mr. Chantrell had referred to the Spanish houses of Bruges; and it was a curious circumstance, that although the Spanish dominion in Flanders existed only 150 years, the buildings of that era, both in Bruges, Lille, and other towns, displayed a distinctive and magnificent Renaissance character, with large bold features and richness of decoration. He did not think the white stone employed at Bruges resembled that of Paris, but that it was rather an indurated chalk, such as was found at St. Omer. While on the fronts of some of the Belgian houses the ironwork bore the date, on these Spanish houses the date was sculptured in the stone panels, so that a chronological series of them might be selected.

Mr. Papworth said that the English moulded and cut bricks were of a very different material from those now in use. Some good specimens would be found in the doorways of the two Temples in London. They were kiln burnt, with a close grain, made without breeze, and were laid, not in mortar, but in lime cream, thinned to the greatest possible extent, and they were sometimes driven into their place with a mallet. The work was left out in bosses where necessary, and these were cut to the required form. After being worked with the chisel they had to be rubbed, so that an enormous amount of work was necessary, and a 13-inch capital would not cost less than 6*l*. or 8*l*. at the present time. He believed the comparison of cost between moulded bricks of common form and common Portland stone would be a little, but not very much, in favour of the latter. To the four brick districts already mentioned, he begged to add another, the south of Spain, where some very interesting works existed. The Spaniards also used terra cotta, and of this material there were some examples in England. These dated from before the Civil War, and preceded the use of sculptured brickwork, which came in after that period.

Mr. Scoles said that moulded bricks had been extensively used (for the tracery of windows, &c.) at Cossey Hall, Norfork, the seat of Lord Stafford. These bricks were made upon the spot, and he believed that the damage from breakage in burning rendered them as expensive as stone. For plain splayed work, however, moulded bricks would be as cheap as common bricks.

Mr. C. Fowler said that the subject of brick buildings was peculiarly interesting to him, as he had special opportunities of studying the subject, and had brought before the notice of the Institute the brick architecture of the north of Germany. The specimens illustrated by Mr. Chantrell were all of later date than those, with the exception of the bell tower of Bruges. The description which Mr. Chantrell had given of Bruges forcibly reminded him of the German towns, especially of Lübeck, where the wide but grass grown streets, and the houses, either untenanted or applied to other than their original purposes, exactly tallied with Mr. Chantrell's account of Bruges. In the practical application of moulded bricks the most essential requisite was to design so that very few moulds only should be needed. The buildings in the north of Germany presented great variety in their appearance, but the different forms employed were really very few. With M. Chateauneuf he had spent a considerable time in studying these buildings. They had drawn every moulding they could find, and the result was that the variety arose chiefly from the combination. They had also visited the places where the bricks were manufactured, and where in some instances the manufacture had been carried on for centuries. The brick-fields of Lübeck, for instance, had been in constant operation since the erection of the cathedral, repairs and other works being constantly required. At Lübeck the works were conducted in a very primitive manner, but at Rathenau,* where the best bricks were manufactured for Berlin, the more modern processes were used. All the German bricks were kiln burnt and retain their form better than the English clamp bricks. He believed that glazed bricks were not used at a very early period. Glazed headers however, accidentally vitrified in the kiln, were employed, and the use of artificially glazed bricks ensued. The latter appeared to have been glazed by dipping them into some solution, and perhaps burning them afterwards, but the glaze was certainly not applied before the brick was burnt. Mr. Fowler stated that his father had employed moulded bricks to some extent for the circular-headed windows of a large lunatic asylum, without any extra cost beyond that of plain bricks, which, for such a purpose, would require to be axed and rubbed.

Mr. Hayward stated that the tower of the church of St. Botolph, Colchester, adjoining the ancient Priory, was full of the most elaborate moulded brickwork, the work of the proprietor of a large brickyard near the town; and it afforded a most satisfactory proof of our ability to execute any work of the kind.

The Chairman drew attention to the grandeur of the buildings illustrated by Mr. Chantrell, arising from their magnitude and height; points which were not sufficiently attended to in English street architecture.

ON THE RESEMBLANCE BETWEEN MEDIÆVAL AND CLASSICAL ART, AS EXEMPLIFIED IN THE GLASS PAINTINGS OF THE TWELFTH AND THIRTEENTH CENTURIES.†

IT may perhaps be recollected that on a former occasion, whilst adverting to the harmonious agreement between ancient painted glass and ancient Gothic architecture, I alluded to the resemblance which the glass paintings, contemporaneous with the architecture of the latter part of the twelfth century and early part of the thirteenth, bore to the antique; and thus I concluded, from their agreement with the architecture, that we might contrive to produce modern glass paintings equally in keeping with early Gothic architecture, and superior to the old ones as works of art, if, instead of merely copying these ancient remains, or perhaps barely correcting their bad drawing, we should strive to work up to those models of excellence which inspired the earliest Christian artists, and which have been admired, and I will venture to say will be admired so long as an appreciation of beauty shall continue to be a faculty of the human mind, although persons may occasionally be met with who seem to have been rendered insensible or indifferent to their merit by a too exclusive study of the Mediæval art. In the discussion which these remarks occasioned, the propriety of illustrating my views by means of a drawing was suggested, and I agreed to resume the subject whenever I was prepared with such a means of explanation. I have been prevented from fulfilling my promise earlier, but the delay is not to be regretted, since it has afforded me more time for consideration. Even now I would particularly guard myself against the supposition that the drawing produced pretends to be a perfect exponent of my views. To carry out these views as I desire would require far greater artistic power than I can command; and therefore I must request you to regard it not by any means as a finished design, but simply as an explanatory diagram.

The influence which classical antiquity exerted on the arts of the west, principally through Byzantium, has been repeatedly insisted upon and illustrated by modern writers. In some instances we are almost able to see the very track by which such influence was transmitted: in others it is impossible to forbear ascribing much to the effect of local remains, the fruit of a Roman occupation: in either case it is difficult to discriminate between the work of native and foreign artists. Still, however, a common resemblance points to a common origin. A variety of causes may unite to render this resemblance more palpable on some occasions than on others. But the wider the experience the more positive is the belief in the Byzantine

* In the old Mark of Brandenburg.

† Read by Mr. Charles Winston, Hon. Mem. at the Ordinary General Meeting of the Royal Institute of British Architects, June 16.

or Greek character of western art in the twelfth and thirteenth centuries.

From this influence ancient glass paintings are not exempt. They are infected by it in the same degree as other specimens of pictorial art. I am sorry I cannot corroborate by documentary evidence the opinion I have formed from the appearance of the painted glass. When and where the art of painting upon glass was discovered is still a matter of conjecture. The testimony of the earliest writer, Theophilus, by itself only shows that, at the time he wrote, France was, *par excellence*, the country in which it was practised. He tells his readers, that they will find in his book "all the knowledge that Greece possesses in the kinds and mixtures of colours; Tuscany in inlaid works, and the various kinds of niello; Arabia in malleable, fusible, or chased work; Italy in the various kinds of vases, and the carving enriched with gold and silver, of gems and ivory; *France in the precious variety of windows*; and the industrious Germany in the delicate workmanship of gold, silver, copper, iron, wood, and stones." The Abbé Texier indeed—the author to whom I have had the most resort, because his inquiries are the most germain to my own pursuits—considers it probable that the honour of the discovery is due to the Limoges school of artists;* and though his chief reason, the similarity of the process of enamelling to that of glass painting, of itself is entitled to little weight, especially if the opinion be correct that Germany shared with Limoges the manufacture of enamelled ware, the leaning of my mind, in the absence of any evidence to the contrary, is in favour of his opinion. Our not finding any specimens of painted glass earlier than the twelfth century or the end of the eleventh, and these nowhere except in France—so far, at least, as I am aware of—affords a presumption that earlier specimens never existed, and that the commencement of the manufacture was in France. And I have long been of opinion that the glass used in the earliest glass paintings was made from Greek or Byzantine recipes, on account of its being so similar in texture and colour to the ancient Greek glass. Therefore (without, however, necessarily committing ourselves to the opinion that the art was discovered in France) I think we may safely conclude that it was discovered in Western Europe by some school of artists under Byzantine influence. Indeed, the very badness of the figure-drawing in the earliest examples, as compared with the excellence of the foliaged ornaments—and which, therefore, cannot be attributed, as in the case of the earliest enamels, to any peculiar difficulty in the manufacture—is an argument in favour of the discovery being made by a school of artists as yet immature, such as a provincial school might be considered in comparison with that of Byzantium. And by way of accounting for the spread and intensity of Byzantine influence in France, I may mention, on the authority of M. Texier, that as early as 979 a Venetian colony was settled at Limoges, for the purpose of trading with the spices and other commodities of the East, conveyed from Egypt by way of Marseilles. Mr. Fergusson, in his very useful Handbook,† corroborates the supposition that it was with Alexandria that the Venetians had their closest connection, though no doubt, as the great carriers of the Levant, they were, at that time, in frequent communication with Byzantium. To what extent the Venetians imbibed the Byzantine principles of architecture—in some degree modified by their commerce with Alexandria—is seen by a reference to their great church of St. Mark (a building remarkable, according to Mr. Fergusson, for being the only real specimen of Byzantine architecture within the limits of the Western empire), and the churches of St. Front Périgueux, the erection of which is ascribed to the Doge Orscolo I., who came to sojourn in France in 978. Souillac, Angoulême, Cahors, Solignac, Fontevrault Abbey, Fleac, St. Hilary of Poictiers, and others, all at no great distance from Limoges, attest, in their general architectural resemblance to St. Mark's, how thoroughly the colony carried with it the taste and arts of the parent State.

The Byzantine school, thus implanted in France, was during a considerable period continually having its traditions revivified and corrected by the influx of fresh artists, and new works of art from the East. Greek artists, it seems, were living there in the thirteenth century; and as late as 1421 an inhabitant of Limoges brought with him an artist to carve a resemblance of the Holy Sepulchre, on his return, by way of Venice, from a pilgrimage to Jerusalem. If, then, glass painting were a French art, having its cradle in or in the neighbourhood of Limoges, we should expect to find its earliest remains displaying Byzantine features, and if so, the features more or less strongly developed of the Antique; and wheresoever the birth-place of the art may have been, I assert that its earlier remains do display these features. The most careless observer can hardly fail to be struck with the resemblance between the glass paintings of and towards the middle of the twelfth century, and the illuminations in the contemporary Greek MSS. or with the frequent recurrence in them of Greek ornaments; and the same general character may be traced in glass paintings until quite the middle of the second half of the thirteenth century, when it gradually died out, before the increasing influence of a new style, of which the sculptures in the choir of Lincoln, to which Mr. Cockerell has directed our attention,* may be said to be an early and a favourable type. But the glass paintings which, on the whole, most closely resemble the antique, are those which were executed between 1170 and 1240, or thereabouts. I am not seeking to deny that these works were executed by native artists either in France or England; but I cannot ascribe, as some have done, their greater freedom and closer likeness to good models, merely to the progressive improvement of a school. It seems more reasonable to suppose that the change was in great measure caused by the influx of Greek artists, and greater aptitude on the part of their pupils to profit by instruction. The draperies, instead of being tightly wrapped about the limbs, and scanty in their proportions, as in the earlier examples, are more elegant and flowing, reminding one of the voluminous draperies of the antique; which they resemble not only in the set, but the very form of the folds, betokening a material thin in texture, and, from its pliancy, allowing the action of the limbs to be easily seen beneath it. The heads, too, more nearly resemble the antique in their contour. In one of the windows of Canterbury Cathedral, erected shortly after the fire in 1174 (the second window from the west, on the north side of the choir), are some heads which might have been copied from the old Roman. There are some similar ones at Lincoln, in glass, of the same date as that of the north rose, and now worked into it, though not belonging to it. There is also a strong resemblance to the antique in the fashion of the garments. It is well known that the Romans had in great measure ceased to be the gens togata (Romanos rerum dominos, gentemque togatam) even in the reign of the Emperor Augustus. The lacerna, a cloak fastened on one shoulder with a clasp, and sometimes furnished with a hood, originally borrowed from the army, became, on account of its greater convenience, worn with the tunic, as the ordinary dress of the Roman citizen, and by degrees the toga was reserved for State occasions. After the removal of the seat of empire to Constantinople, a variety of additional dresses were used, many of them of Greek origin; the more stately of which were, with its usual tact, appropriated by the church, as it gathered power, and which are the foundation of the mass vestments of the Roman clergy at this day. This has been clearly demonstrated by the learned Krazer,† whose accuracy, though it may have been painful to the high churchmen, as showing the Pagan origin of some of the most sacred things, has never been impugned. Some of these dresses were, moreover, adopted in their courts by the barbarian conquerors of the Roman empire, and thus were handed down to later times. The Dalmatic, in which the effigy of King John, in Worcester Cathedral, is clothed, is an instance, and the modern peers' state robe is another. The most popular dress amongst those nations who possessed themselves of the territories of the empire, no doubt was the tunic, with or without the lacerna, or a shorter cloak used by the private legionaries, called the sagum; and this dress, with slight modifications, appears to have been in actual use in the thirteenth century. The Mediævals almost invariably adopted the tunic with long sleeves, in preference to that with short sleeves, which was the one usually worn by the Romans; and instead of the Braccæ and buskins of antiquity, they clothed the nether man in long hose, over which they use long shoes or boots. So that, with the exception of the legs and arms being clothed, there is but little difference between an ordinary thirteenth century figure copied from glass, and a figure taken from the arch of Titus, or Trajan's column. The long tunic reaching to the feet, so common in the glass paintings of the thirteenth century, also had its prototype in imperial Rome. The figures on the arch of Titus show that it was at that time often worn beneath the toga. Indeed, startling as it may appear, representations of the toga itself are to be found in pictures on glass of the thirteenth century; and I have little doubt in my own mind that the mantle which, carelessly thrown over the long tunic, constituted the conventional dress of prophets and of saints, not being ecclesiastics, throughout the middle ages, was, in fact, but a corruption of the toga.

With regard to the *Ornament*, it is easy by means of the carved ivories (of which I perceive a catalogue by the Arundel Society, has just been issued), to trace the transition from the classical, to that used in the twelfth and thirteenth centures. It is so plain that the mediæval artists borrowed their ideas of ornament from the antique, and which being so purely architectural and conventional is on that account, I think, the finest of all ornament, that I shall not urge the matter farther. Indeed, the thing speaks for itself. I shall, therefore, proceed without farther delay to deduce a few practical hints from the facts I have stated.

The question that naturally arises is, if glass paintings whose drawing so much resembles the antique, completely harmonize with the buildings of the twelfth and thirteenth centuries, would not other glass paintings equally harmonize with such buildings whose drawing should more exactly resemble the antique in point of excellence? I say in point of excellence, for I totally disclaim any intention of recommending the substitution of copies of classical draperies or ornaments for mediæval ones, or exchanging the individual character, and strictly human, as opposed to God-like expression of the countenance which distinguish Christian art, for the more generalized and conventional treatment of the antique. I wish to see the Christian sentiment elevated but not obliterated by a study of the antique, and the mediæval drapery drawn as the mediæval artist would have drawn it had he possessed the power of the Greek.

I am persuaded that if the same tone of colour which we see in ancient glass paintings of the twelfth and thirteenth centuries be adopted, all archæological requirements will be satisfied by adhering to the costume of the period, and general form of ornament, and preserving the individuality and character of the heads. Thus the attitudes of the figures, the arrangement of the groups, and general cast of the features, might be taken as closely as possible from the antique, whilst the draperies should be treated as being thin in texture, voluminous, accommodated to the limbs, and moulded into deep simple folds. I believe that works executed upon this principle would often be taken for old ones of very superior quality. No doubt to achieve such works would require far higher artistic power than is generally now employed in glass painting, and a vast deal more time to be bestowed on their preparation than is now required, all which would tend to increase their cost. But having confidence in the common sense of the country, I believe, if the matter were properly presented to their minds,

that most patrons of glass painting would prefer possessing one picture window in a church, exhibiting a decent display of art, all the other windows being filled with good pattern glass paintings instead of being content as now with having every window filled with the veriest trash, under the denomination of Pictures. The present want of artists to execute such works is no argument against the system, since we may be sure that plenty of artists would come forward as soon as they ascertained that their services were required. If the system is correct, there can be no insuperable difficulty in working it out.

Mr. M. D. Wyatt, Hon. Sec. called attention to some drawings exhibited by Mr. Waring, Associate, which illustrated the principles laid down by Mr. Winston. He added that the best confirmation of Mr. Winston's opinions might be found in the works of the early Italian masters who studied entirely from the remains of Greek art, and whose pictures, if transferred to glass, would make the most perfect glass paintings that could be had.

Mr. Waring, Associate, said that in the drawings exhibited his object had been to show that the best painting was applicable to glass as well as to any other material. In glass painting especially the end justified the means, and if the effect was striking and beautiful, it was absurd to quarrel with the material. A general feeling existed that opaque objects should not be painted on glass, but in the drawings before the meeting representing windows in the Duomo of Florence, executed in the early part of the fifteenth century, colour was the means of producing the effect. The drawing was excellent, but colour was the great point the artists had in view. He had seen nothing in oil painting approaching the excellence of these works, and he believed when a painter witnessed the effect produced by the richness and brilliancy of them when the sun shone through them he would be tempted to throw away oils in despair. Tuscany was particularly rich in specimens of painted glass, and it was a matter of surprise that so many artists had visited Italy without describing or illustrating the numerous specimens there to be found. Mr. Waring gave the dates of the windows shown in his drawings, and the names of the artists by whom they were executed.* He drew attention to the fact that in these works the design was made without regard to the intersections by the lead line, and he believed, from examination of numerous specimens, that the lead line, far from destroying the effect of glass paintings, rather added to it. In the specimen, from the Jerusalem Chamber, exhibited by Mr. Winston, the lead line went completely across the head of the Saviour, but if seen at a distance, that lead line could never be observed. The idea conveyed by these works was that of a beautiful work in mosaic rather than a painting. The idea of the injurious effect of the lead line had induced a mode of treatment in modern works which produced the effect of transparencies rather than mosaic work. This was the case with some of the specimens exhibited in the Great Exhibition of 1851.

Mr. Wyatt said that in a former discussion of the subject there appeared to be some difficulty in understanding how it was that the black line was essential to beauty in stained glass. The reason was that those colours which transmitted most light were apt to spread upon the adjoining colours, and therefore unless the black line went round the light parts the whole windows would fuse, and the lighter parts would appear to eat up the shadows.

Mr. Donaldson observed that in glass painting one obvious requirement was, that there should be no large surface of any one unbroken colour. The object was to fill up, in one way or other, whether by black lines or by ornament, all the spaces, so that they should mould one into the other, and yet have a line of demarcation; but there was no great mass of unbroken colour in any one part whatever. Therefore in the example shown by Mr. Winston, a portion of a Jesse window, although the whole was cut up into small parts, it still formed an agreeable composition. In another specimen shown by Mr. Winston, the figures were made to occupy as much as possible of the whole space, leaving as little ground as possible dividing them; and he believed Mr. Winston could find that in his own design rather too much ground was left, the figures being too small. In the old works large and powerful masses of dark colour formed the predominant tints, to which the other colours were subordinate. In examining the various examples of different ages he had always felt that these were some of the principles which had guided the best painters on glass; and, to a great degree, the effect had been irrespective of the forms of any particular period. He believed the forms of any period might be made harmonious, provided these leading elements were adhered to with regard to the combinations of colour. Mr. Winston's design was an effort to get rid of the trammels which bound down modern artists. In France the art had recently been carried out very successfully.

Mr. Winston stated that in his own design he had given more ground round the figures purposely to counteract the spread of colour in the figures, which, it would be observed, were invariably coloured lighter than the ground of the panel. In the example shown from the Jerusalem Chamber the effect was not satisfactory, because the figures were so crowded that there was not sufficient ground to cut them clearly out.

Mr. Donaldson was of opinion that there should be very little ground, but that that should be of a very deep colour. Glass painting should be treated like bas-relief in sculpture. In the bas-reliefs of the Parthenon and the tombs of the Greeks, especially of the later period, and in the Roman triumphal columns, the proportions of the figures were rather large and gross, in order to fill up the ground. This was necessary in order to produce fullness and richness of effect, and to prevent poverty of expression in the figures.

Mr. Wyatt said that the principle in ancient art was to allow sufficient ground where poverty of action was intended, but where continuous and moving action was required, as in the Parthenon and Trajan's Column, they filled up the whole of the ground. The same law would hold good in glass painting, but for the swelling of the colour of the light parts. He therefore agreed with Mr. Winston that a larger proportion of ground was necessary in glass painting than in any other branch of art.

The Chairman, Mr. Tite, observed that the want of success attending modern English glass painting, as compared with that of France, arose as much from a want of combination of colour as from a want of character in the design. Many costly attempts had been made in which the colouring was utterly inharmonious; and the want of character in the imitation of ancient glass was equally remarkable. In some recent cases, as at Ely Cathedral, the object appeared to be to copy all the ugliness of ancient glass; and he sincerely wished some of the ameliorations proposed by Mr. Winston might be introduced.

* St. James, from the Transept of the Cathedral, Florence; Prophets and Saints, from the same place, ascribed to Francesco Gambassi, 1434, but certainly earlier; St. Matthew and St. Mark, from the Choir, Lucca Cathedral—Ugolino da Pisa, 1482; Virgin and her Child, from the North Transept, Sta. Maria, Novella, Florence. Alessandro Fiorentino, 1491.

CROMLECHS AND INSCRIBED STONES IN CORNWALL.

WE noticed, lately, a work containing views of the "Ancient Crosses and other Antiquities in the West of Cornwall," drawn and engraved by Mr. J. T. Blight.* We have since learnt that Mr. Blight, now little more than twenty-one years old, is wholly self-taught, both as a draughtsman and wood engraver, and has progressed in the face of difficulties; and we would therefore strengthen the previous notice, and obtain for him, if it might be so, the aid of those interested in antiquarian pursuits.

We will let him speak for himself, and give a few of his representations of cromlechs and incised stones.

There are five of these ancient monuments in the west of Cornwall, all in a good state of preservation. The remains of one may be seen in a field about half a mile from the Lanyon cromlech, and of another at Bosprennis, in Zennor. There are two other cromlechs beyond the limits of his inquiries,—one at Trevethy, in St. Cleer, and another, now fallen, at Coit, in St. Columb.

The cover-stone of the Lanyon cromlech is 18½ feet long and 9 feet wide: from the under part of this stone to the ground it measures 5 feet. Borlase, and others who have followed him, state, that this cromlech is high enough for a man on horseback to pass under it. The Caerwynen cromlech (fig. 1) is less than that of Lanyon.

The Zennor cromlech is the largest in the county: the supporters are about 9 feet high,—the cover-stone, 18 feet long and 10½ feet wide.

The cover-stone of Mulfra is about 9 feet by 12 feet. The upright stones are 5 feet high.

The top-stone of Chûn cromlech is nearly 13 feet long and 11½ feet wide: its elevation is about 4 feet. (See fig. 2.)

The Mên Amber (fig. 3) is in the parish of Sithney, on the property of C. W. Popham, esq. of Trevarno. It was formerly a logan-stone, but was thrown off its balance in the time of Cromwell, by Shrubshall, then governor of Pendennis. This stone is 11 feet long from east to west; depth, 4 feet. Mên Amber is a corruption of Mên-an-bar, which signifies *the top stone.*

There is a Druidical Circle at Boscawen-ûn, St. Burian: fig. 4 shows it. The stone within the circle, which is in a slanting position, measures 8 feet in length. The stones which compose the circle are at irregular distances, some being 8 feet, and others 12 feet asunder: they are from 4 feet to 5 feet high. This circle consists of nineteen stones, and is about 73 feet in diameter.

Mên-an-tol (the holed stone)—fig. 5—is at Anguidal-down, Madron.—Centre stone, 4 feet in diameter and 1 foot thick,—the hole, 1 foot 3 inches in diameter. The other stones stand about 7 feet or 8 feet from the holed one, and are from 4 feet to 5 feet high.

In the parish of Wendron there is a holed stone like the above: it is 7 feet high, 9 feet long, and 1 foot thick,—the hole, 1 foot 6 inches in diameter. In a field adjoining there is a barrow covered with rough stones.

Fig. 6 shows some Inscribed Stones in St. Hilary Churchyard. "The parish church of St. Hilary was destroyed by fire in 1853: in clearing away the ruins the above inscribed stones were discovered. One was found built into the wall with the inscription downwards, filled with mortar, and a portion of one side had been chipped off to make it even with the wall, and thus part of the inscription was destroyed. The first line is nearly gone, yet the letter P, as an initial letter, is perceptible: then follow contractions of the words *Flavio Julio* (or *Juniori*); then *Constantio* (or *Constantino*, these words being used indifferently for the same person, as may be seen by reference to the Fasti Romani Consulares); then *Pio*, with the abbreviation of *Augusto*; then *Caes*, for *Cæsari*; then an anomalous word which is considered to be *Divi*; then *Constanti*, for *Constantini*; followed by *Pii*; and *Aug.* for *Augusti*; terminating with *Filio*. The inscription may be interpreted,—*P . . . . to Flavius Julius* (or *Junior*) *Constantius* (or *Constantinus*), *the pious and august Cæsar, son of the divine and pious Constantine the Great.* The date of this monument, which was probably a milliarium, or mile-stone, must be somewhere between A.D. 326 and 337: it is composed of a coarse elvan or porphyry, which occurs in the parish. The length of this stone is 4 feet 6 inches, breadth 1 foot 11 inches, and 10 inches thick."

The other stone is of granite, and measures 6 feet 7 inches in length, 1 foot 9 inches wide, and 10 inches thick: it was found at the north-west angle of the chancel, 2 feet below the level of the floor. From its position, it is probable that it was used as a foundation-stone; and it is imagined that the symbols inserted on it, arranged in two lines, represented Masonic tools and implements, which had been adopted as a sign manual by Notus, the builder or architect of some ancient structure which might have stood on the same spot. The inscription would simply mean, "Notus, his mark." "Notus, his mark." The symbols are shown by fig. 7 on a larger scale.

Mr. Blight's endeavours deserve encouragement.

* London: Simpkin, Marshall, and Co.

OUR ROADS AND WAYS.

MODERN cities and towns have a great advantage over the earlier Capitals as constructed by our ancestors: they are founded not only in the best localities as regards convenience of harbourage and water-carriage, but they are laid out in wide and straight streets that quadrate with each other. There is a clear vent and view from end to end, at every angle, and in four directions; each line terminating in the expanse of nature, whether it be land, or ocean, or river.

In the United States the benefit of such arrangement is exemplified by the metropolitan Washington; and the cities of South Australia, laid out on the same plan, will secure to increased populations an immunity from those complexities, sinuosities, and incongruities which hamper and disfigure old London.

In progressing from a hamlet to a village,

then to a town, then to a commercial port, then to a city; all the constrictions of the first foundations were here retained, whilst suburban districts became incorporated within the nucleus of the bills of mortality, and the limits of small tenures, in crofts, tofts, and messuages, defined the causeways, and fixed the old arterial ducts of communication between the old heart and the more healthy new limbs of the municipal body. Thus it is that, with the exception of the Tower, there is no loose in old London: it is baled and packed together like the common warehouses of great contractors: ground was too valuable, space within the walls too limited. Between London-bridge and Blackfriars, at right angles with the river, a distance of scarcely three-quarters of a mile, there are twenty-four streets traversing Ludgate-hill and Cheapside, all running nearly parallel to King William-street and Bridge-street! St. Paul's Cathedral occupies the first great open space cleared within the corporate jurisdiction, and, together with the improvements consequent upon the great fire of 1660, led to the epoch of architecture which, under the great Sir Christopher Wren, conferred upon this country credit for architectural celebrity. The great thoroughfares of access which now lead from the City, such as the Commercial-road, Whitechapel-road, Shoreditch, and Aldersgate-street, were mere accidents. They then *led to* the City, as did Oxford-road, the New-road, and others: so that for width and directness, the public now existing, and still breathing, is indebted in nowise to the original design for the vitality *they* afford to an aggregate multitude of nearly *three millions*. It would not be fair to omit the credit due to liberality and enlarged notions, for Trinity-square, Gough-square, and the Temple-gardens!—that is all that was set apart for the health and recreation of citizens; for Finsbury and Gray's-inn-square, as well as Lincoln's-inn-fields, were *extra muros*. We must not, however, forget that the hallowed Smithfield was *intra libertates*.

As stated in a recent number of the *Builder*, most of the old streets remain in the pristine curvilinear and rectilinear propinquity. The value attained by commercial position and convenience of sites, formerly occupied by dusky counting-houses, has transmuted the modest lane shops of such merchant princes as once gifted this country with colleges, almshouses, schools, and hospitals, into mighty palaces of stone and marble: so far the narrows of old London are rigidly fixed, but no farther.

Old boundaries were doubtless the directing lines for the roads or streets when first formed: a fence, a ditch, or a wall were winding, and the proprietor built up to his metings; the public way thus taking the direction of private rights.

The greatest amount of individual profit was considered, rather than general convenience.

We did not make the city nor the town, therefore we must take them as we might a slop garment,—*ready-made;* and, as in the latter case, all we can do to adapt the vesture to the shape and body of our times is to open out a little here, to take in a little there, and so rub on, until occasion and circumstances may allow us new fabrics with new and better workmanship.

In young America, as in our new colonies, where blocks of land are surveyed and laid out in squares, such irregularities of crooked and mazy roads are less of a necessity. Private property in lands is easier both of measurement and of definition: your neighbour's landmark is, in territorial cases, settled by a meridianal and longitudinal line: four angular points, at most, demarcate it, and a solar observation sets it at rest. It is thus they square their differences in the new States, and the system of square miles, or 640 acres, to a block, is extended to townships in one-half, one-quarter, one-eighth, or one-sixteenth sections.

A great sameness may be considered to follow the chequering of a town in this fashion,—Street 100, in width and extent, corresponds so exactly with Street 10. It is not so; for, unlike Russell, and Harley, and Wimpole, and so on streets, there is a diversity of structure,—the taste, fashion, and fancy, are as strongly contrasted as the extent, style, and pretension of the houses: and then you have the termination at either end *invariably open*. To form an idea of the effect of this, we have only to recollect the feelings produced on us by the opening of Portland-place into Regent's-park; or on a smaller scale, those of Grosvenor-street or Brook-street into Hyde-park; but the aspect of an internal square, such as Russell-square from Bedford-place, and others similar in that locality (so agreeable on that account only), is quite sufficient to embody the idea of a noble route, having its termination in the country. If it be woodland, the trees glitter in the sunshine and rage with the storm: in snow or frost, and every variety of season, they are beautiful: if hill or mountain, plain or prairie, still the sense of freedom rushes on the thoughts of townsmen and of drudges, every time they look forward during their out-door occupation.

There is yet a stronger motive for the *thorough range* of streets, and the planting of forest-trees within cities, and that is the perfect ventilation secured by the former, and the more healthy atmosphere by the latter.

Those familiar with the city will readily remember the freshness occasioned by *lime-trees* grown to forest dimensions in some courts and recesses, as well as in churchyards there. The Parisians know how to value their Boulevards: they sit and linger and luxuriate under their road-side trees. Some approach to their taste is carried out in Westbourne-terrace and in Eaton-square: these are noble beginnings, so far as they go, but made only to be seen, not enjoyed, by the wearied squatter.

It would be too much to expect, that the most magnificent street in London, Pall-Mall, should be opened to the Green-park, and thereby another proof given of the highly picturesque in alliance with much that is beautiful in architecture, and all that is ancient and courtly in the metropolis. The great facilities for such an improvement are obvious; it needs but to remove six houses and a stable slum, six more small houses, which are hoarded up against the Old Palace in St. James's-place, and Lord Sydney's block, next the Green-park. The park itself need not be thrown open, except by a footway; so that the grand effect of a vista, extending to Buckingham Palace gardens, might be obtained, without trenching upon the privacy of Lord Ellesmere and the Duke of Sutherland: a light iron railing would disclose the view and admit the air, and then Pall-Mall might rival some of the Parisian public places.

It is high time that some beginning were made in the reformation and transformation of this strangely incongruous metropolis; to clear away the decayed and rotten, to straighten the crooked, and to open out the inaccessible portions. The sinews of war can in nowise be so profitably used as on works of peace.

THE REMOVAL OF OLD LONDON.

THOSE who feel interest in comparing the construction of the old houses of London with those of the present time would do well to make a pilgrimage to some of the places in which extensive alterations are going forward. The opportunity at the present time is most favourable, for during no part of this century have there been so many venerable houses either in course of removal, or marked for it by props, shores, and other unmistakeable indications.

Over the Temple gate the carved house of James the First's time is at present left standing. A vigorous inroad has, however, been made into the buildings adjoining. The side of Cardinal Wolsey's Palace, as it is wrongly called, is exposed to view, and is a characteristic specimen of the timber framework of the better sort of London dwellings of the above date. The backs of other houses here exposed to the daylight are remarkable for the rottenness and combustible nature of their materials, and the absence of sufficient means of ventilation. This mass of houses is also worthy of note in marking the stoppage of the great fire of 1666 in this direction. On the west side of Chancery-lane a portion of London saved from the fire may still be traced. This, however, is in course of removal. The houses which adjoined the shop of honest Isaac Walton, on which were some quaint carvings, have disappeared, and active means are at work for the removal of the other buildings of the same date which reach to the brick buildings of Lincoln's-inn: these have been much altered from time to time: there are, however, some richly ornamented ceilings, which will not remain many weeks, yet which are worthy of notice. At Carey-street, Chancery-lane—a site of some historical interest — the pullers-down are at work; and although we acknowledge our liking to places of old date, we can scarcely regret the operations which are here going forward, for we have seldom passed this nodding group without having the uncomfortable feeling that the warped walls would rush down upon some unfortunate wayfarer. On the south side of this place, at the corner of Bell-yard, is a building which has been already described, in the *Builder*, as almost as great a curiosity as some of the leaning towers abroad. This house, which has been said (on slight authority) to have been designed by Inigo Jones, is about his date. The staircase of hand-turned wood, the massive panelling on the ground-floor, may be all seen but little changed. On the first-floor there is a room fitted with carved panelling of great beauty. The mantelpiece is not so old, and has evidently been there placed in the reign of Charles II. when Gibbons had introduced elegant scroll-work, which forms a feature of the dwellings of that day. This room only requires the ornamental ceiling to make it, if the paint was removed from the panelling, the most perfect example of the kind which we have met with in London. The exterior form of this house is elegant, and some Ionic columns are worth examination. We were glad to peep into Bell-yard, and find that place and the courts we have already noticed, drained, much to the benefit of the inhabitants. Various attempts have been made here to transmogrify the shops: large plates of glass have been brought into use: some of the pents have been removed, &c.: still in defiance of all these efforts this narrow yet bustling London alley cannot be deprived of its picturesque and old-fashioned appearance.

Up Chancery-lane—wondering at the difficulty there has been to get but a trifling increase of roadway—down Holborn,—the people of Plum-tree-court wondering, as we also did, what they are to do for lodgings. On the wide and long space of the Fleet-valley the clearing away of dwellings is still continued. The area cellars of many of the new streets have been completed, and the roadways in the course of formation; and it is curious, in this bright, sunny weather, to contrast the dusty ways with the grim masses of brickwork which now enclose this great site. Some pents where the windows are out look very black; but brickwork, and woodwork, and tiles, have a sable, pall-like hue, which shows the prevalence and effect of London smoke.

In Smithfield and the neighbourhood several very old houses are marked for demolition: some of them are reported dangerous. In Farringdon-street, some old places of about the time of the fire are shaky, particularly those at the corners of lanes; and beyond the Fleet Prison-wall, a great opening is being made through the block of houses eastward. In Fetter-lane, the famous White Horse Tavern, the sign of which, emblazoned on the stage coaches, was so familiar to boys, and those of older years, in many parts of the kingdom, a little while ago, has now, its "former occupation being gone," been transformed into a lodging-house for mechanics, &c. A large part of the lane has given way to the new Record Office, and the little bit left of old date at the bottom will soon move on. We have noticed several masses of timber buildings, behind the brick facings in the winding passages near Gough-square. A fire, a few months since, broke out near here, which was remarkable for the rapidity of its progress: the parts behind were chiefly of wood, and it must have been by extraordinary exertions that it was prevented from extending further.

Old London is rapidly giving way to the new, and ere long the student of the history of the metropolis will only be able to gather from books the appearance and economy of the abodes of our forefathers. And while feeling no small pride in the advancement of this great city, we are bound to urge upon the authorities the great want there is of suitable dwellings for those whose houses have been removed. Some of the streets east of Langham-place, Portland-place, and many other parts we could mention, in consequence of this neglect, have already become densely packed with human life; and the evil is increasing, as will be evident to any one who will take the trouble to walk in the right quarters, particularly in the dusk of a summer evening.

THE BATH STONE QUARRIES.

IN the number of the *Builder* for June 21st, you seem to express a wish to know from what quarry the stone was derived of which Ralph Allen's house, now called Prior-park, was built. I think I can give you a little information upon that subject, and also upon the state of the Bath stone quarries at that time (about the year 1730), for which I am largely indebted to a work on Bath, published by the celebrated Wood himself in 1765.

The ancient freestone quarries were subterraneous caverns, from time to time dug out in the prow of the hill known then under the Roman name of *Camalodunum*, which comprised that part of the hills lying to the south of the city of Bath, now bearing the names of Hampton-downs, Coombe-down, Claverton-down, and Odd-down; and they have been remarkable for ages past, not only for the manufacture of wrought stone for buildings, but also for small ornaments to embellish them.

The exportation of block freestone was a branch of the trade with that building material in which Mr. Allen engaged himself. He first purchased some of the quarries on Camalodunum, with the land about them; and then determined to make such a tramroad between the summit of the hill and the river Avon, as had just been made in the north of England, from the collieries to the river Tyne.

This circumstance plainly shows us the site of the quarries then in the possession of Mr. Allen, for the tramroad is at present in very good preservation, and leads from the quarries now known as producing the Hampton-down stone, to the river in the valley beneath. The best bed of this stone is of a beautifully warm colour, and is now being used upon the new Bank at Bristol, and several other works in the west of England.

Accidents frequently happening in the old subterraneous quarries, Mr. Allen began to dig for stone in a new quarry open from the top, the refuse of which was burnt into lime.

There was great opposition to the introduction of the stone into London; some of the opponents comparing it to Cheshire cheese, liable to breed maggots that would soon devour it; and Mr. Colin Campbell, as architect, together with the Messrs. Hawksmoor and James, his clerks of the works at Greenwich Hospital,

were so prejudiced against it, that at a public meeting of the governors of that building at Salters-hall, in the spring of the year 1728, they represented it as a material unable to bear any weight, of a coarse texture, bad colour, and almost as dear as Portland stone for a public work in or near London.

Wood himself was present at this meeting with samples of several kinds of stones; and the governors ordering them to be laid on the table before them, Mr. Campbell himself, by mistaking one stone for the other, gave such a notorious proof of his partiality, as led the governors into an inquiry concerning the mason's trade, that enabled them to contract for their new work in Portland stone, upon terms full three-and-thirty per cent. below what they had formerly paid.

This great abatement entirely defeated Mr. Allen's proposals for carrying on the mason's work of the hospital with his stone; and the reflections cast upon the freestone of the hills of Bath brought him to a resolution to exhibit it in a seat which he had determined to build for himself near his works, to much greater advantage, and in much greater variety of uses, than it had ever appeared in any other structure.

About 800 tons of freestone in large blocks were buried underground to make a secure footing, and upon this the main walls of the building were erected, both inside and out, with wrought freestone. The whole of the basement is vaulted, and the paving composed of freestone of a harder kind than the walls. It is part of the first bed of the open quarry; and from its calcined or rather shelly nature, the workmen call it ragstone. It is the very stratum of stone that makes the roof of the subterraneous quarries, and the next layer under it is generally as much softer than the good freestone as the rag is harder.

Wood, in describing his work, says,—"Now as the seat was thus far sufficient for displaying the material proposed to be recommended to the public by it, the perambulation for the curious was thus designed. After viewing the stables in the simplicity of the Doric dress, and coming under a pavilion, great in its kind, they were to enter an Ionic gallery, which would have had the effect of a vast long stage to a rich theatre; and this leading them to the stone passage that traverses the basement story of the house, from thence they were to ascend, by a flight of stone steps, to a stone hall of the Corinthian order, and then pass into the sumptuous portico of the same order. Returning from this pavilion into the hall, and passing through the dining-room, dressed with the Corinthian order, a staircase, enriched with the same order, was to amuse them while they were ascending to the chamber story, proposed to have been finished with all the elegance and beauty that could possibly be given to works in the Corinthian dress; and from this gallery they were to pass into the tribunal tent of the chapel, where the Corinthian order was to increase in its magnificence; and by representing cherubim and palm-trees placed alternately, give them an idea of the manner in which King Solomon finished the inside of his temple at Jerusalem."

Pope was an intimate friend of Mr. Allen, and it was here that he wrote many of his works. WM. J. GREEN.

ARCHITECTURAL ASSOCIATION.

ON Friday evening, the 27th instant, an ordinary meeting was held: in the absence of the vice-president, through illness, the chair was taken by Mr. T. M. Rickman, A.I.B.A. After the minutes of the previous meeting had been read and confirmed, the honorary secretary read the following letter from the council of the Royal Institute of British Architects, addressed to the honorary secretaries of the Architectural Association:—

GENTLEMEN,—We are instructed by the Council of the Royal Institute of British Architects to address a few observations to you, which they will feel obliged by your bringing under the notice of the Architectural Association generally.

The Council of the Royal Institute of British Architects have for a long while watched, with sincere sympathy, the efforts at self-improvement made by the members of the Association, experiencing true pleasure when those efforts have been concentrated on ends tending to the general good of the profession, and pain when they have occasionally observed an antagonistic feeling springing up, either among the members of the Association or towards this Institute.

The Council have long desired that the professional exercises carried on under the countenance of the Institute should assume a more serious character than they have hitherto done, so that the inducements to take part in them might not be limited to the student's class, but might prove sufficiently attractive to induce at least all the younger members of the profession to take part and interest in them.

The Council have regarded a friendly co-operation with the Architectural Association, or a more or less complete fusion of their members in the list of those of the Institute, as one means to this desirable end; and it is mainly with a view to ascertain how far such a connection might be made practicable, that the present communication has been framed.

The Council desire us to transmit to you a copy of the charter and bye-laws under which the Institute exists as a corporate body: slight modifications might, if necessary, be made in the latter, but none can be introduced in the former. No alteration can be made in the manner of admitting members, but the Council have little doubt that the necessary formalities would offer no real obstruction to the incorporation of the Architectural Association, as some years ago they offered no obstruction to the old Architectural Society, presided over by one of the Institute's present vice-presidents, Mr. Tite.

By the latter amalgamation unity of action was insured, and great benefits were derived by the profession: corresponding advantages, in a greater or less degree might probably be obtained, if the energetic desire for self-improvement, manifested by the majority of the members of the Architectural Association, was infused into those classes of the Institute into which their professional status would permit the various members of the Association to be admitted.

The Council of the Institute, far from desiring to interpose the slightest obstacle to any suggestion which might be made for carrying on within the apartments of the Institute the exercises for self-improvement which appear to have been attended with happy results in many personal instances in the Association, distinctly pledge themselves to co-operate to the fullest extent of their ability with any such suggestion which may appear likely to conduce to a useful and successful issue.

In conclusion, the Council desire to record their opinion that every alienation among its members tends to a lowering of the social weight and position of the profession as a body, and that a policy of affiliation is infinitely to be preferred to one involving repulsion or isolation.

With every desire that the members of the Architectural Association may be induced to recognize what the Council sincerely believe to be the best method of attaining those desirable ends the Association has proposed to itself,—We have the honour to be, Gentlemen, your obedient servants,

(Signed) CHAS. C. NELSON, M. DIGBY WYATT, } Hon. Secs.

After the letter had been read, several members expressed their opinions as to its importance and complimentary nature. Mr. Cates then proposed, and Mr. Gray seconded, the following resolutions, which were carried unanimously:—

"That the secretaries do write to the secretaries of the Royal Institute of British architects, acknowledging the receipt of the letter, and informing them that it shall be taken into consideration by the Architectural Association at the earliest opportunity after the recess."

"That the letter be referred to the Committee to consider the whole subject, to collect information thereon, to ascertain the feelings of the members generally, and to prepare an answer to be sent to the Institute, which answer shall be submitted to a general meeting at the earliest opportunity of next session."

The following gentlemen were elected officers for the next session:—

President.—Mr. Arthur Allom. *Vice-President.*—Mr. G. J. Wigley. *Treasurer*—Mr. T. W. Goodman. *Registrar.*—Mr. A. Billing. *Secretaries.*—Messrs. T. W. Goodman and J. A. Bunker. *Ordinary Members of Committee.*—Messrs. A. W. Dresser, B. A. C. Heneng, C. Gray, G. W. Lloyd, H. Hall, T. M. Rickman, and H. Stone. *Auditors.*—Messrs. T. W. Hovenden and J. H. Christian. *Curators.*—Messrs. F. B. J. Benwell and Randall Druce.

PROVINCIAL NEWS.

Lynn.—The new public baths being nearly completed, the committee have issued a report, from which it appears that the original estimate of 1,200*l.* has been exceeded by about 93*l.* The 1,200*l.* (including 300*l.* from Lord Stanley), have been collected, except about 40*l.* The original plans have been reduced, to bring them within the means at command.

Chelmsford.—The chief stone of the new Corn Exchange here was laid, on Friday last, by Sir John Tyrell. The contest between the two rival schemes ended in a friendly arrangement and compromise, by which the site selected is that in Tindal-square, as the centre of the town, and the most convenient for all. The building is to be in the Lombardic style, the front being faced with stone to the height of the first floor, and above that with white brick and stone dressings, and crowned with a stone cornice and balustrade. The entrance will be through three arches to the hall, which is to be 100 feet by 45, with a gallery above, so as to adapt it for public meetings, &c. The roof is to be of glass. The architect is Mr. Frederic Chancellor, of Chelmsford; the builder, Mr. S. Simpson, of Ipswich; clerk of the works, Mr. C. Taylor, of Chelmsford.——In honour of the meeting of the Royal Agricultural Society at Chelmsford, a sum of 150*l.* has been voted from the public fund for ornamenting the streets and open spaces in the town, and in order that this may be applied with effect, the committee have arranged with an architect (Mr. Clark, of Gloucester), to furnish designs and superintend the erection of the principal arches which are to span the public way.

Reading.—On Wednesday in last week, the ceremony of laying the corner stone of the new schools in course of erection at the south end of Trinity Chapel, Queen's-road, Reading, was performed by Mr. H. S. Keating, M.P. for Reading. The design for the new building has been prepared by Messrs. Poulton and Woodman, of Reading, architects, and is being carried out under their supervision. The walls are rising. The style is Early English, in harmony with the chapel. The size of the school inside is 50 feet by 25 feet. Windows at the east and west ends, and a series of smaller ones towards the north, give light to the interior. Messrs. North, Martin and Jordan, Matthews and Freeman, are the contractors for the works, at the total amount of 508*l.* 9s. 9d.

Oxford.—It has been resolved to postpone the formation of the proposed Peace Fountain in St. Giles's, for the present, the commissioners in the meantime erecting their flushing apparatus, so that the whole can be afterwards completed.

Tunbridge Wells.—The chief stone of Christ Church National Schools was laid on Thursday in last week, by Miss Sophia Franklyn. The building about to be erected will accommodate 208 children. The length of the school-room will be 48 feet by 26 feet.

Brighton.—The local guardians propose to erect new schools for the workhouse, on a site between the reservoir and the Race-hill, and by the removal of the present schools from the workhouse, and by the erection of some new wards, to obviate the necessity of building a new workhouse. The arrangement still requires the sanction of the Vestry and the Central Board. ——The tender of 14,100*l.* by Messrs. Haley and Hornby, contractors, has been accepted for the erection of a mansion for Mr. Hankey, at Balcombe.

Crickhowell.—A sum of 500*l.* towards the erection of new schools here having been offered by Miss Payne, a sister of the late Archdeacon Payne, on condition that the funds to commence building with should amount to 900*l.* and a site be also provided, another lady, Mrs. Hardman Phillips, of Gwernvale, forthwith offered 400*l.* and Mr. W. E. Seymour, of Porthmaw, gave a site. The inhabitants, moreover, added 450*l.* making in all 1,350*l.* and the new school has been erected on the site given, which is near the church. The building comprises a boys' room, 45 feet by 18 feet; a girls' room, 40 feet by 18 feet; a commodious class-room; and master's residence. The builder was Mr. J. Daniels, of Crickhowell, who is said to have

satisfactorily carried out the idea of the trustees, Mr. E. W. Seymour and Dr. Lucas.

Weymouth.—The new waterworks are proceeding with activity. The large reservoir on the hill near the Wyke-road, to supply the Weymouth side of the harbour, approaches completion. The pipes are being laid down in St. Thomas-street. There will be 800 tons of iron piping, which, when laid down, will extend over a distance of fifteen miles, and, before it can be completed, will cost nearly 30,000*l.*

Devonport.—The tender of Messrs. Greenwood and King, of Devonport, builders, who have had much of the Government work in this locality, has been accepted for the building of a series of cottages, stores, &c. at Bull Point, where they are engaged in executing a large contract. The amount of the tender now accepted is 8,500*l.*

Bath.—The foundation-stone of the Lansdown Proprietary College was laid on Tuesday in last week. The site is near the new Kingswood Wesleyan College, but on the opposite side of the Lansdown-road. The architect is Mr. Wilson, of Bath. The style of the building is Gothic, of the Early Decorated period. The principal front to the west, parallel to the Lansdown-road, comprises a central tower, with staircase turret, at the angle, surmounted by a spirelet. A high-pitched gable, with oriel windows in it, and a smaller gable and turret on the north side of it, form the centre, from which two wings run north and south, containing the several halls for the various classes of study. The principal entrance is in the tower. The senior school in the north wing is reached by a branching staircase leading from the vestibule, and contains an area of 3,500 square feet, and is lighted by a series of early traceried windows, towards the east and west, and one large window of five lights in the north gable. The roofs throughout this floor are open timbered, plastered, and coloured in pattern between the rafters, and stained. In the south wing is a similar room, of an area of 2,100 square feet, with a raised stage at one end. On this floor are rooms also for the principal and vice-principal, and a spacious library. On the ground-floor, the north wing is appropriated to five smaller halls of study (four of these averaging an area of 450 square feet each, and one containing 840 square feet), approached through a cloister, with windows facing the west. In the south wing is a dining-room for daily boarders, and kitchen, stores, &c. The ventilation, on the principle patented by Watson, of Halifax, is effected by means of the turret in the roof over the central school. The building is to be covered in by the 1st of June, 1857, and completed for habitation by the 1st of July, 1857. The contract has been taken by Mr. Edward Streeter, of Bath.

Bristol.—The plans and specifications for the completion of St. George's Hall, Broad-street, are now prepared, and the building will be altered and decorated forthwith. Messrs. Pope, Bindon, and Clark, are the architects.

Worcester.—The unsightly and dangerous archway leading from Cooken-street to the Warmstry-slip has been pulled down, by the arrangement of the Model Dwellings Association, and a good thoroughfare opened from St. Alban's Church through Birdport. The new dwellings approach completion, and ultimately three if not four sides of the square will probably be occupied by them.

Stratford-on-Avon. — The *Literary Gazette* states that a Mr. John Shakspeare, who claims a relationship to the poet, is about to cover Shakspeare's house, at Stratford, with a building of glass and iron, to protect it from the weather. The cost is estimated at about 3,000*l.*

Macclesfield.—The old grammar-school having become inconvenient and dilapidated, the governors decided upon erecting more commodious buildings in the field to the rear of the old school. Designs were accepted from Mr. F. T. Bellhouse, of the firm of Messrs. D. Bellhouse and Sons, of Manchester, and the new buildings have been erected in the Gothic style, at a cost of 3,230*l.* The inauguration of the new school took place on Friday last.

Birmingham.—The new music-hall, erected in Broad-street, by Mr. Briggs, from the designs of Mr. Cranston, is near completion, and will be opened in September next. Externally the hall presents no marked architectural features: internally it is fully decorated. Experiments on the distribution of sound in the hall have been made, and the result is said to have been satisfactory.

Birkenhead.—A large hotel, in Conway-street, Birkenhead, nearly completed, fell to the ground on Monday in last week. Two men narrowly escaped. The foundation, it is said, was bad, and the building of inferior quality.——A graving dock is projected at Birkenhead, which will be large enough to contain the gigantic steamer, the *Great Eastern*. The length of the proposed dock is 718 feet, and width 120 feet. The cost and estimates, prepared by Messrs. Freeman, of London, are under 100,000*l.*

Warrington.—The works of the new market are drawing towards completion, but it is doubted whether the market will be ready by the 16th of July; and if not, a penalty of 10*l.* per week will be inflicted.

Manchester.—The new wholesale fish-market, erected in Great Ducie-street by the Lancashire and Yorkshire Railway Company, and leased to the corporation, was for the first time occupied on Wednesday in last week.

Halifax.—The Wesleyan day and Sunday school building will be of the Decorated style of Gothic architecture, and will consist of school-room, 66 feet by 32 feet, and two class-rooms, each 19 feet 6 inches by 15 feet 7 inches, the whole of which will have open timbered roofs. The principal entrance to the school will be through a porch in the gable end towards Orange-street. At this end there will be a large three-light traceried window over the entrance, and a one-light traceried window on each side of the porch. The northerly side of the school will have six three-light square headed windows, and two two-light pointed windows surmounted with gables. The south side will correspond with the north. On the west side will be the playground, in which will be the master's residence, of the same style as the school building. The works have been contracted for by the following tradesmen:—Excavator's and mason's work, by Messrs. Hesseldine and Sons; carpenter's and joiner's work, by Mr. Wm. Jackson; slater's and plasterer's work, by Messrs. Joseph Bancroft and Sons; plumber's and glazier's work, by Mr. Wm. Barrett. The architects are Messrs. R. Ives and Son.

Sheffield.—The Sheffield gymnasium recently erected and fitted up in Clarkhouse-lane, at a cost of near 3,000*l.* (in 5*l.* shares) was last week offered by public auction for the mortgagee. There was a numerous attendance, but not a single bidder, although from the inquiries made a brisk competition was expected.

Penrith.—The new baths and wash-houses here were recently opened. They form a commodious building, situated in Hunter'-lane, next to the Working Men's Reading-room. There are two large plunge baths, and a number of private baths and rooms fitted up for patients who wish to remain to take the benefit of the water. The washing apparatus is complete: there are stands for fifty or sixty women, with wringing-machine, &c. The baths have been well attended since the opening.

Dundee.—An attempt is being made to combine with the proposed new public hall here, a new court-house and post-office, on the large site at the Meadows.

Nairn.—The harbour improvements formed the subject of discussion last week at a meeting of Town Council, and a committee was appointed to take steps for raising funds to the extent of 7,000*l.* or 8,000*l.* on security of the harbour revenue, with the view of carrying out a part of the engineer's plan, and commencing the works this season. The Council have already contracted for the repair of the breakwater on the east side of the river, and the workmen are now engaged in its execution.

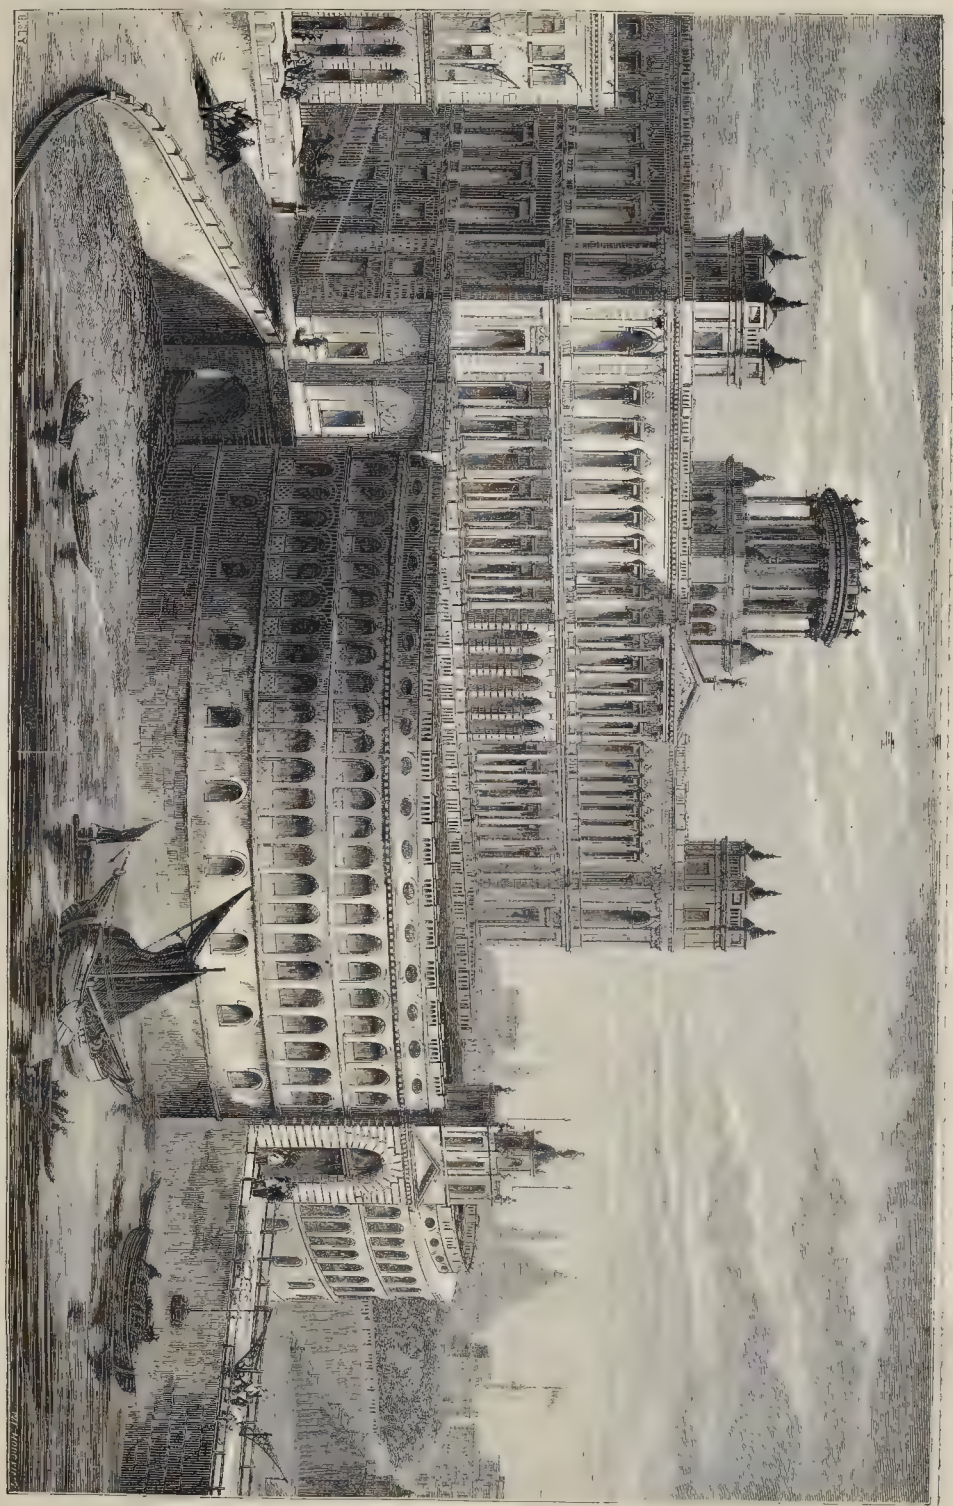
Banff.—A new drain along the High-street was decided on at late meetings of the Burgh Police Commissioners and Parochial Board; and specifications were agreed on, that the drain should be at least 4 feet deep, the conduit to be built with stones, and at least 18 inches square. After advertising for estimates, another meeting was held on Thursday in last week to receive them, when the offer of Wm. Scott was accepted, in which, according to the local *Journal*, he engaged to complete the whole, affording all materials and carriage, at 2s. 10½d. per yard. The drain extends from the bottom of Boyndie-street, along High-street, to the top of Back-path, a distance of 200 yards or upwards.

Wick.—A sale of building feus, lying along Bridge-street, Wick, says the *John O'Groat Journal*, was disposed of by public roup at an annual feu rent, on Wednesday in last week, when the whole were sold at high rents. The five street feus of a frontage of 30 feet each, and from 80 feet to 100 feet back, brought 53*l.* or about 7s. per foot, frontage. The back feus around the Free Church brought between them half that amount—in all, 85*l.* 10s. exclusive of what was formerly built upon.

ARTISTICAL.

RUBENS'S celebrated *Rainbow Landscape* was sold the other day amongst Lord Orford's collection of pictures for the sum of 4,550*l.*

At the same sale we were glad to observe that some *Carvings by Mr. Rogers* sold for more money than had been paid for them. This was the case, too, at a sale at Mr. Strahan's, at Ashhurst.



Mr. Burford's Panorama of St. Petersburgh, Leicester-square, wherein he has been very ably assisted, as of old, by Mr. Selous, is as well painted as any that has been exhibited, and serves to give a good idea of the scale on which public buildings are executed in that capital. We may safely recommend a visit. The water, by the way, is particularly well painted.

The Council of War, painted by Mr. A. L. Egg, A.R.A. from photographs taken on the spot, is a very characteristic and satisfactory production. Those who were at the place at the time tell how Pelissier sent for his "orders" when he found he was to be photographed; while but for a red stripe on the trowsers, Lord Raglan would scarcely be thought military.

NEW CUSTOM-HOUSE AND PUBLIC OFFICES, AT BUENOS AYRES.

WE have received a sketch of the new Custom-house and public offices, designed by Mr. Edward Taylor, architect, of Buenos Ayres. The semicircular portion of the edifice nearest to the Rio de la Plata is drawing fast to completion, and will be used as deposit stores. It is a substantial mass of building, three stories in height, covering nearly two acres and a half of ground. The materials of the country, brickwork (built with bricks 13 inches by 6½ inches by 1½ inch), and hardwood timber, are almost exclusively used in the structure; and massive square brick piers and vaulted arches occupy the position which in Europe would be occupied by iron columns and fireproof floors of modern design. Covered promenades extend along the curve in the two upper floor levels, and the entire roof of this portion is formed so as to serve as a terrace, commanding a fine view of the river and shipping. The larger edifice in the background is intended for Government offices, and will occupy the site of the antiquated fortress, which is no longer useful as a military defence, owing to its having been over built by the surrounding structures, as well as to its being in a dilapidated state. Goods are intended to be conveyed from the vessels in the inner roads, 14 or 15 feet water, by means of a railway connecting with a mole. The present mole has been carried out 450 yards from the Alemeda wall, but this distance being insufficient to bring it into deep water, it is proposed to extend it 700 yards farther. This wooden mole has been built under Mr. Taylor's direction.

LONDON DOCKS.—The foundation stone of the London Dock Company's new works at Shadwell has been laid. The works consist of a large basin or dock, with an entrance to the river, and a communication lock from the new basin to the eastern dock; the entrance lock to be 350 feet long, 60 feet broad, and 28 feet of water on the sill of gates, capable of affording accommodation to the larger class of shipping. The cost of the undertaking is estimated at 700,000*l.*

CUSTOM-HOUSE AND PUBLIC OFFICES, BUENOS AYRES.—MR. EDWARD TAYLOR, ARCHITECT.

CHURCH-BUILDING NEWS.

Gainsborough.—The ceremony of laying the foundation-stone of Burringham Church was performed on the 18th ult. The village wore a holiday appearance, and garlands were plentiful. The church, which will be dedicated to Saint John the Baptist, is intended to afford nearly 200 sittings, and to have a peal of four bells. The estimated cost is 1,270*l.* towards which about 1,000*l.* have been raised by subscriptions, bazaars, &c. The Church-Building Society contributed 100*l.* The lord of the manor gave the site of the church and burial-ground, to which he added 50,000 bricks, and his son, Capt. Healey, 25,000 more.

Sleaford.—The cemetery for Sleaford was consecrated on Tuesday in last week. The ground is formally laid out, but there is no chapel, an inconvenience complained of. A lodge is to be erected.

Cinder-hill (Nottingham).—Christ Church, Cinder-hill, in the parish of Basford, was consecrated on 19th ult. by the Bishop of Lincoln. The church has been erected on a site given by the Duke of Newcastle, with consent of his son, the Earl of Lincoln. The design was furnished by Mr. T. C. Hine, of Nottingham, architect. Mr. J. Fisher, of Nottingham, was the builder and general contractor. The church will accommodate 380 persons, and has cost about 2,000*l.* It is in the Decorated Gothic style of fourteenth century, with geometrical tracery and sculptured corbels (heads of sovereigns, &c.), and consists of a nave, north aisle, chancel and porch, with a turret for three bells at the south-west corner of the nave. At the east end of the aisle there is a recess for an organ, divided or separated from the aisle by a triple arcade, with double rows of slender shafts, sustaining foliated capitals. The nave is 62 feet by 21 feet, the aisle 52 feet by 9 feet, and the chancel 25 feet by 17 feet. The extreme altitude of the nave is 42 feet vertical height. The roof is of lofty pitch, and formed of a series of framed rafters and collared beams; while that of the chancel is of framed rafters with curved braces. The windows throughout are filled with stone tracery; the west end window being composed of two lights, filled with tracery, extending one-third of the height from the head, and surmounted by a trefoil light. The large eastern window of four lights, surmounted by geometrical tracery in quatrefoils, is filled with figured (glass) quarries. The small window of quarry lights in the north aisle was glazed by Mr. N. W. Lavers, of London. The design is very simple, and of small cost, though considered effective, being a cross and fleur-de-lis on alternate panes; the cross rising out of a red, and the fleur-de-lis out of a green gem, the whole being enclosed in running borders of flowers and leaves. The aisle is divided from the nave by an arcade of four arches, in which Minton's encaustic tiles are introduced in the form of a border, constituting a substitute for the ordinary hood moulding. These arches rest on octagonal piers of Ancaster stone. The chancel arch is supported on triple stone shafts, with triple moulded capitals.

Harrow.—The first stone of the Memorial Aisle of the new school chapel at Harrow (in honour of the Harrow officers who fell in the Crimea), was laid on Thursday in last week, by Major-General Sir W. Fenwick Williams of Kars.

Croydon.—Exertions are being made to realise funds for completing St. Peter's Church, Croydon, with tower and spire, according to the design of the architect, Mr. Scott.

East Hoathly.—The church at East Hosthly has been rebuilt and enlarged. The new church comprises a nave, north and south aisles, and south porch, of Early English architecture: the cumbersome galleries have been removed, a screen erected between the tower and the nave, and the west window thrown open. The windows of the chancel have been filled in with stained glass from Mr. Lavers, London. The rebuilding and enlargement of the church were carried out by Mr. Cheale, of Uckfield, builder.

Brighton.—At a vestry meeting held last week a report from the Burial Board was received and adopted, and the Board authorised to borrow 6,000*l.* on the poor-rates, to be laid out on the new burial-ground, and repaid in twenty years. The following was the estimate in the report referred to:—

Walling to enclose 20 acres	£1,027	0	0
Widening and formation of road	1,344	17	0
Two chapels, each to accommodate 100 persons...	1,500	0	0
Sexton's lodge and receiving house	550	0	0
Entrance gateway for memorial (say)	200	0	0
Laying out the ground	800	0	0
Contingencies, superintendence of works, and law expenses...	578	3	0
	£6,000	0	0

Newport (Isle of Wight).—The slaters are now covering in the roof of St. Thomas's church, Newport, rebuilt by Messrs. Dashwood, of Ryde, from designs furnished by Mr. W. S. Daukes, of London.

Sherborne.—The architect engaged in the restoration of the chancel of Sherborne church, according to the local *Journal*, has been making a survey of the edifice. The wall which divides the ambulatory from the present residence of the head-master of the King's School, has been opened, and a fine arch of the Early English period exposed to view. The arch is in such a state of preservation that it can be perfectly restored: the gilding and decorations still remain: the capitals are of delicate workmanship, and the clustered columns are of polished Purbeck marble. This arch, which, it is thought, must have been erected in the beginning of the thirteenth century, was the entrance into the ladye chapel. How that came to be converted into a residence is a mystery. Hutchins, in his "History of Sherborne," speaks of there being, probably behind the "unmeaning heavy altar-piece of Norway oak," "an entrance into a part of a chapel dedicated to the Blessed Virgin, which, in most cathedral and conventual churches, stood at the east end of those fabrics. The tradition that there was a chapel where the school now stands is confirmed by the groins and niches in the roof and sides of the house, exactly corresponding with the general style of the church." The master's house appears to consist of three chapels,—the ladye chapel, the chapel of St. Mary of Bow, and a third chapel, as yet unexplored. In the walls have been found a great number of curious remains, tiles, carved stonework, &c.

Warminster.—The works in connection with the restoration of the chapel of St. Lawrence are making progress. The amount collected is about 550*l.*; but to complete the whole about 200*l.* more will be required.

Devonport.—Preparations are being made in a field adjoining Cecil-street, for the purpose of laying the foundation stone of the new Roman Catholic chapel. Mr. Roberts, of Stonehouse, is the contractor for the work, and Mr. Hansom, of Bristol, the architect.

Gloucester.—A public meeting has been held on the subject of the proposed cemetery for this city. The corporation having decided upon the purchase of a piece of land at Tuffley, about two miles from the city, for the purpose of a public cemetery, a portion of the citizens opposed the project, and a deputation was formed to wait upon the corporation, requesting that a piece of ground belonging to the corporation at Wotton might be selected. This deputation now reported that they had been unsuccessful.

Wolverhampton.—At the meeting just held here, as to the completion of the Collegiate Church restorations, a report by the architect, Mr. Christian, was read, stating that the works up to the present time, including "the restoration of the clerestory and the re-roofing of the nave of the church, the partial re-building and re-casing of the west front, the restoration and re-roofing of the south aisle of nave, and the restoration of the porch, the repair of the tower, and the external drainage, with a few minor improvements, have cost 4,416*l.* 11s. 6d. of which all but 66*l.* 11s. 6d. has been paid. In order to repair the north aisle and north and south transepts in a similar manner, and to put a new roof on the north aisle, a sum of 1,950*l.* 10s. 2d. is required, to which 10 per cent. should be added for contingent expenses." The report suggests several improvements in the interior of the building, and concludes by remarking that with regard to the chancel, to which the above estimate does not extend, the present building is so very miserable, and so discordant with the noble proportions of the remainder of the church, that nothing short of re-building can possibly remedy its present grievous deficiencies. The meeting was thinly attended. Resolutions to appeal to the inhabitants of Wolverhampton to raise the amount required, and appointing a committee, were unanimously agreed to.

King's Norton.—The restoration of the west entrance of the parish church of King's Norton has just been completed. The children's and singers' galleries are removed, the partition of the tower-arch and the ringing-floor taken away, and the perpendicular west window is now seen from the nave through the tower arch, which extends from the floor to the ceiling of the nave. The pews have given way to open seats. Workmen are now engaged at the east window of the chancel, and a new organ, costing 250*l.* will be among the improvements.

Sydenham (Oxon).—The parish church was re-opened by the Bishop of Oxford three weeks since, it having been closed for some months for general restorations, new seating throughout, and the erection of a wooden spire by Mr. Holland, builder, of Thame. Mr. John Billing was the architect.

Bowdon.—On Monday in last week a meeting of the parishioners of Bowdon was held "to take into consideration the extensive repairs necessary for the restoration of the parish church, and to enter into a subscription for defraying the cost of the same." A report by Messrs. Starkey and Cuffley, of Manchester, architects, was read, which pointed out the extent of the dilapidations of the church, and the best means of restoration. The report stated that a considerable portion of the edifice must be entirely rebuilt. The reporters proposed to take down the exterior walls of the north and south aisles, together with the porch, and to rebuild the same, using up the old materials where practicable. The tracery for the new windows, buttresses, and parapets to be executed in Alderley Edge stone. The roof of the south aisle to be taken off, and a new ornamental roof in oak to be substituted. To take down such portions of the nave wall and arches as are in a dilapidated state, and to rebuild the same and insert new clerestory tracery windows on both sides. The nave roof to be taken off, and a new oak ornamental open-timbered one to be substituted. The organ to be taken down and to be re-erected in the north aisle of the chancel. The whole of the church to be re-pewed with new oak pews, also a new oak pulpit and reading-desk. It appears to be indispensable to retain the galleries, and also to erect an additional gallery, entirely remodelling the same. The tower to be repaired and renewed where required. Resolutions favourable to a thorough restoration were passed, and a committee appointed to see to the objects of the meeting. The proposed alterations would give sixty additional sittings, and the projected new gallery from forty to fifty more. About 1,000*l.* towards the 4,000*l.* to 5,000*l.* said to be requisite, were at once subscribed.

Alderley.—The parish church of Alderley has been recently improved in its interior by the patron of the living, Lord Stanley of Alderley. The chancel having fallen into disrepair, Messrs. Starkey and Cuffley, of Manchester, architects, were commissioned to prepare designs for its renovation, which have been carried out by Messrs. Bowden, Edwards, and Foster, of Manchester. The chancel is rebuilt in the Early Decorated style of thirteenth century, with Alderley stone. The buttresses, porches, windows, pinnacles, gable crosses, &c. are decorated. The interior of the chancel is decorated in stone carving, painted windows, &c. The tracery of the windows is flowing in character, and the scripture subjects and stories were wrought in the glass, by Messrs. Edmundson, of Manchester, and Mr. Wailes, of Newcastle. In one of the canopied recesses, at the end of the sacrarium, there is an altar tomb of Caen stone, in the Gothic style, with a life-size recumbent figure of the late John Thomas Stanley, first Baron Stanley, of Alderley. This work is by

Westmacott. The cost of the eastern window was paid by a subscription among the parishioners.

Stanningley.—A new church, dedicated to St. Paul, was consecrated here by the Bishop of Ripon, on Wednesday in week before last. The site is near the local station of the Leeds, Bradford, and Halifax Junction Railway. The building consists of a nave, 65 feet 6 inches long, and 24 feet 6 inches wide; north and south transepts, each 22 feet 4 inches, by 18 feet 3 inches, opening in the nave by lofty arches; chancel, 21 feet, by 22 feet 3 inches; south porch, tower, engaged at the north-west angle of nave and north transept, and in which is the principal entrance to the church; vestry at the south-east angle of the chancel, and south transept. The tower is surmounted by a broad spire, and the height of tower and spire is 90 feet. The style is plain Early English. The windows in the north and south sides of the nave, transepts, and chancel, are narrow single lancets. The chancel window is a triplet with foiled heads, under one hood mould. The west window has four lancets and superimposed quatre-foil and hood mould. All the roofs are open, and gabled. The roof timbers and wood fittings are of deal, stained. The building is of hammer-dressed wallstones, with stone dressings. The whole structure is plain. It will seat 519 persons, and the amount of the contracts was about 1,300*l.* The architects were Messrs. Perkin and Backhouse, of Leeds; the builders, Mr. Richardson, mason, Bretton West; Mr. W. Smith, joiner, Leeds; Mr. Barker, plasterer, Leeds; and Mr. Storey, plumber, Leeds.

Mottram.—On Wednesday, in last week, Mottram Church, which has been closed for repairs during the last fourteen months, was opened for divine service by the Bishop of Chester. The amount of subscriptions actually paid is 2,178*l.* 8s. 6d. and the interest of money, with the proceeds of the sale of old materials, raise this sum to 2,543*l.* 1s. 8d. of which about 2,250*l.* have been expended upon the building alone. Mr. J. E. Gregan was the architect, and Messrs. Eaton and Hollas, of Ashton-under-Lyne, and Messrs. Stokes, Brothers, of Stalybridge, were the contractors. The organ has been wholly rebuilt, by Mr. John Wheeldon.

Liverpool.—St. Aiden's Church was opened on 27th ult. The edifice is small and plain: it is in the Pointed style, with a nave with two side aisles, and a gallery capable of containing nearly 200 sitters in the west end of the nave. Altogether, the church is seated for about 900. The material is red sandstone. Above the western gable is a small belfry, in which there is a bell. The whole cost of the building, exclusive of the site, is stated to be about from 3,500*l.* to 4,000*l.*; the site itself being valued at 4,000*l.* Mr. Nicol, of the firm of Nicol and Holme, of Liverpool, builders, were the contractors for the whole of the work. St. Aiden's is intended chiefly for dock labourers and their families who reside at the north end of Liverpool. Mr. Shaw Leigh gave the site, in Victoria-road, near Rakelane. Mr. Arthur Holme was the architect.

Barnsley. — The Congregational Church, Regent-street, Barnsley, has had its spire completed, which rises to an altitude of 160 feet, and terminates with a vane 10 feet in height. The architect was Mr. James, of London. This new edifice is in the Gothic style.

York.—The Methodist new connection have had their new chapel in Peckitt-street opened. The building, including a large school-room, with vestries, is in the Byzantine style of architecture, and has been erected under the superintendence of Messrs. Atkinson, of this city. It is called Trinity Chapel, and will accommodate about 800 persons. In front is a circular and a five-light window. There is in the interior a small gallery on each side.

Whitby.—St. Michael's Church, Whitby, was consecrated on Wednesday in last week. This edifice was opened so long since as 14th September, 1848.

Edinburgh.—It is expected that the meeting of the General Assembly of the Free or Dissenting Church of Scotland in 1858 may take place in a new building to be erected for the meetings of the Assembly. The site is contiguous to the Free Church College, and the hall, when built, will be almost parallel to the Assembly Hall of the Established Church, the two being separated by merely the breadth of a narrow street. The estimated cost of the building has been stated at 4,000*l.* The disadvantage which the locality presents in obtaining effective light from side windows it is intended to obviate by having the house lighted from the dome, which will be mainly composed of iron.

Elgin.—At a meeting of the Elgin Parochial Board, held on Wednesday in last week, a committee was appointed to look out for a site for a new burying ground, and to obtain plans. This proceeding is taken under the present "Burial Grounds (Scotland) Act," by which parochial boards are authorized to borrow such funds as they may require from the Government commissioners for advancing money on public works.

Kilcronaghan.—After a long delay, the building of the new church of Kilcronaghan, says the *Coleraine Chronicle*, has at length been commenced. Last week the foundation was laid, without the usual ceremony, on a plot of ground adjoining the town of Tubbermore. The site is elevated. It was granted by the Rev. Marcus M'Causland, Parsons-town, King's County, as a gift to the parish, and to promote the interest of the Protestant religion in that locality. The edifice will be 82 feet in length and 36 feet in breadth, and will be 18 feet high in the side-walls. The contractors are Messrs. Birnie and Co. The building is progressing, but many months will elapse before the work is completed.

CARLISLE.

THE re-opening of Carlisle Cathedral took place on 22nd ult. the restorations, which were commenced in August, 1853, having just been brought to a conclusion. They include the general repair of the building, externally and internally, renewing decayed portions, supplying those missing, &c. The flat roofs of the nave and transepts have been removed, and high-pitched oak roofs, covered with lead, substituted, the new end gables finished with crosses, and filled in with tracery windows. A geometrical design has taken the place of the modern tracery in the great north window; and a moulded and carved doorway has been inserted in the south front of the transept. The western portions of the cathedral, seen from Paternoster-row, formerly to the eye a mere shapeless mass, have now assumed a very different aspect. The greatest change, however, has taken place in the east end of the choir. Here the stonework of the great window, and nearly the whole of the ornamental details, which were entirely decayed, have been removed. A finishing stroke has been the introduction of the statues in the buttress niches. They were sculptured by Mr. Phyffers, of London, at the expense of the Rev. Canon Harcourt. The figure in the small niche is the Virgin and Child: the others, which are 6 feet 9 inches high, are St. James, St. John, St. Peter, and St. Paul. In the interior great changes have also taken place. The walls have been cleansed from their thick coating of white-wash, the floors taken up and concreted, to prevent the damp rising, and the choir floor relaid with white flags in diamonds. The modern plaster ceiling has been removed from the choir, and the old oak ceiling restored: this is semi-circular in form, and divided into square panels with carved bosses, and shields at the intersections of the ribs. The whole has been richly decorated—the prevailing colours being gold and blue. To give the ceiling its proper effect, much stained glass is required in the building: little, however, has yet been obtained. The tracery lights of the great east window are filled with the old glass, which has been restored by Mr. Wailes, of Newcastle. One of the south clerestory windows also has been restored by Mr. Harcourt. Besides these there are only two new stained windows in the cathedral—the rose window in the north transept, the gift of Mr. Scott, of Rickergate—and a memorial window to the late Dr. Heysham, by Mr. Wailes, just inserted in the east end of the south aisle. Outside, provision has been made for the drainage of the building, and the soil accumulated round the walls is being removed. A better view of the east end will soon be obtained by the removal of a house in Castle-street. The total cost of the improvements has been nearly 15,000*l.* The substantial repairs have been paid for by the Ecclesiastical Commissioners; the decoration of the roof, &c. by the Dean and Chapter, aided by public subscription. The whole of the works have been carried out under the direction of Mr. Christian, superintended by Mr. Purday. The general contractors were Mr. Wm. Dove, of Scarborough, and Mr. Geo. Vasey, of Whitby. The painting of the ceiling was executed by Messrs. Scott and Drape, of Carlisle. The new organ, by Willis, of London, has not yet been cased. "The restoration," says the *Carlisle Journal*, "is still grievously incomplete. The chaste splendour of the resuscitated choir makes more painfully obvious its fatal want of symmetry, and its connection with the hidden, mutilated nave. Noble as are the proportions of the organ, its position affronts every eye that has swept the noble vista of Canterbury Cathedral, where only a low screen breaks the line of view from east to west. Yet would little be gained by opening the transept arches, and rooting out the ugly sheep-pens that make up the parish church, if there were no hope that the original eight arches would some day arise upon the now desolate space in front of the tower. The artistic skill and zeal that have written their own praises on the choir would be well employed upon the nave."——The Church of England portion of the Carlisle Cemetery was consecrated on Monday in last week. This cemetery was opened on 27th May, 1855. The chapel for the use of nonconformists was opened in January last, since which time the service of both churchmen and nonconformists has been conducted in it. The second chapel, for the use of members of the Church of England has more recently been erected at the east side of the cemetery, and directly opposite to that on the unconsecrated ground. Both chapels are in the same style of architecture as the lodge, and are from designs furnished by the Messrs. Hay, of Liverpool. They are both built with pressed bricks, with white stone facings, and are each provided with a bell turret. They are floored with Minton's tiles, and fitted up in the interior with stained seats, and open roofs of stained wood. The windows are of Hartley's stained glass. The Church of England chapel is somewhat larger than the other. Both chapels have been built by Mr. Charles Armstrong. The cemetery is about 1½ mile south-west from the centre of the city.

THE MEROPOLITAN BUILDING ACT.

ARCHES UNDER PUBLIC WAY.

WITH reference to Sec. 25, which specially places arches under any public way under the control of the district surveyor, a difference arose between the City authorities and the district surveyor of Clerkenwell, Mr. Sibley, touching the vaults for the houses in Victoria-street, and streets in connection with the Farringdon-street extension. The former refused to admit the surveyor's jurisdiction, and summonses were accordingly issued against Mr. John Jay, as builder, for the penalty of 20*l.* in each case. Previously to the hearing, however, the authorities admitted the jurisdiction, and the summonses were accordingly withdrawn.

It seems quite clear that separate notice must be given for the vaults of houses if under any public way, and a separate fee is payable to the surveyor for inspecting them.

"*Acts regulating Buildings, &c in the Metropolis.*"—Under this title the honorary secretary of the Builders' Society, Mr. Thomas Piper, jun. has put together, for the members of that society, a digest of the law as it now stands, with reference to building and matters connected with it in the metropolis.* The endeavour has been to afford "a plain description of all the enactments and regulations now in force, and to bring into one view whatever is required by these Acts of Parliament, arranged in the order in which they will come into operation in the regular course of business, and couched in language as much as possible divested of legal technicality." It is only intended by its intel-

* Waterlow and Sons, printers, London-wall.

ligent author as a *guide* to the provisions of the various Acts, and not to supersede the necessity of referring to the Acts themselves, where difficulties occur. Much trouble would be saved if every builder in the metropolis could be persuaded to master it. In another edition the compiler may as well modify the paragraph at the head of page 5, which says, "Before beginning to build or *repair*, two days' notice must be given to surveyor;" since for necessary repair, unless "affecting the construction of any external or party wall," notice is not necessary.

Mr. Piper adopts the belief, that as to the substance of walls of public buildings, "Section 12 is intended to apply, and that the architect of the Board of Works must approve." We have already given reasons for thinking differently, and a recent paper of instructions from the superintending architect shows that the same view is held at the Board of Works, namely, that it is only in the event of *disagreement* between the builder and the district surveyor that reference in this respect need be made to the Metropolitan Board.

COMPETITION FOR THE MANCHESTER EXHIBITION BUILDING.

As a warning to my professional brethren, who might be tempted to engage in competitions where the terms are as ill defined as they have been in the late Manchester competition, I enclose you a letter I have had the honour to receive from the chairman of the executive committee.

I need hardly say that I have declined the proffered gift. OWEN JONES.

The letter says,—

"SIR,—At the last meeting of the general council of this exhibition, it was resolved to acknowledge with some mark of the council's approbation such of the designs for the exhibition building as, either from the genius of their conception, their artistic merit, or their approach to meet the full requirements of the contemplated art treasure display, should, in the opinion of the executive committee, merit such a distinction.

It is gratifying to me to inform you that the design submitted by you is amongst the limited number so selected; and in tendering the enclosed draft as a slight compensation for the labour and expense which have been bestowed on your plans, the committee trust that you will receive their acknowledgment of the ability displayed in your suggestions, and their thanks for the interest you have evinced in the success of the undertaking.

I am, sir, &c.

(Signed) THOS. FAIRBAIRN,
Chairman of the Executive Committee."

The draft enclosed was for twenty-one pounds.

The design determined on was submitted to H. R. H. Prince Albert on Wednesday, the 2nd. There appears to be some mystification as to its authorship.

STANDARD LEVELS.

IN the present discussions on the drainage of the metropolis, and in many maps relating to the levels throughout the country, the Trinity standard on the Thames, and the standard levels at Liverpool Docks, occupy so prominent a position, that you would be conferring a boon on many of your readers by giving them, or by inducing some of your correspondents to give them, replies, on which confidence may be placed, to the following inquiries:—

1. Trinity standard, Thames high-water mark. Where is this placed? and if more than one, where are the others also placed? Do they indicate high-water spring tides at these places, or neap tides, and what are the differences above and below the standard marks of high and low water at spring tides and neap tides at these places?

2. This Thames standard high-water mark is said to be 12½ feet above mean tide level at Liverpool, or Ordnance datum. What are the differences at Liverpool, above and below this datum, of high and low water at spring and neap tides there?

3. Bradshaw's maps of the canals, railways, &c. of England, published in 1830, give in one place the levels from a datum of "6 feet 10 inches under the old dock-sill at Liverpool," while in another place it states the levels are taken from "*low water*" at Liverpool. Is low water at Liverpool the same level as 6 feet 10 inches under the old dock-sill; and if not, what is the difference, and which is highest?

4. In Wyld's Map of the Levels of London and its Environs, published a few years since by order of the then commissioners of sewers, but not dated, it is stated "the altitudes are given in feet above the approximate mean water at Liverpool, being 12½ feet below Trinity high-water mark." In reply to my inquiries on this, I am told this is high water at Liverpool, and that this is 12½ feet below high water at London; but whether it is high water, spring, or neap tides, at each place, or a mean between the two, and what the difference in heights is, I cannot get any information upon.

In studying the sewerage of London and its environs, it is so important to have at once both clear and accurate knowledge on these points; and the whole subject of levels is so intimately connected with the scope of your journal, that I feel assured you will kindly lend your pages for these inquiries, and the replies, if authentic and reliable, of your correspondents who may be kind enough to notice them. AN OLD SUBSCRIBER.

AMERICAN INVENTIONS.

THE commissioners appointed to visit the United States, for the purpose of inspecting the manufacture of fire-arms there, in the course of their inquiries collected a considerable amount of information on a variety of miscellaneous manufactures, which they embodied in their report. Thus, on the subject of,—

Wood Screws.—Very superior wood screws, they say, are used all over the United States. In the generality of wood these screws do not require a hole to be bored for them, as they force their own way, by reason of their gimlet or taper-screwed point. The machinery by which these screws are made is self-acting, and is quite different from the screw machinery used in England.

Machinery for Making Wrought-iron Nails.—There are immense nail manufactories in different parts of the country, where no hand labour is employed. The machines for the smaller sizes of nails are self-acting; for the larger sizes the iron has to be supplied to the machines by a boy, who makes nails at the rate of 200 per minute. Machine-made nails have been much improved by a change in the mode of rolling the iron, by which the fibre now runs in the line of the nail. Large spike nails, used to fasten rails, are also made by machinery, which turns out the spikes at the rate of sixty per minute.

Padlocks, Locks, &c.—The manufacture of locks for doors and padlocks is carried on most extensively. The shells of door-locks are made of cast malleable iron, about one-sixteenth of an inch in thickness, and have the greater part of the wards cast within them. The keys are also cast, and turned by a machine on the clamp milling arrangement. Those that are hollow, are drilled out by self-acting machinery. The door-handles are chiefly made of porcelain, formerly obtained from England and France; but having set up machinery, which not only does all the rough work, but extends even to the forming them in metal dies, and to the turning them on slide lathes on the copying principle, they are now produced of superior quality, and at a remarkably low cost. A lock of good quality, 2¾ by 2½, is sold wholesale at the rate of fifty cents per dozen, each of the twelve having a differently formed key.

File-cutting Machinery.—Striking up the teeth of files has been accomplished in a very successful manner, one machine being capable of cutting twelve dozen files per day, one man being able to attend two of them.

HINTS TO WORKMEN FOR THE PRESERVATION OF HEALTH.

1. ABSTAIN from all spirits and dram drinking. Spirits relax the muscles, diminish the strength of the body, and render men susceptible of disease.

2. When mild-brewed beer agrees, keep to it as a beverage (*at your meals only*).

3. Where (*well filtered*) water does not disagree, value the privilege and continue it. Pure water is a far *better* beverage for the *sedentary*, and those who take but little exercise, and for those whose labour or exhausted strength do *not* require stimulants.

4. The quantity (of most things) is always more hurtful than the quality.

5. Take your meals at regular hours always. The human frame is capable of being changed from sickness to perfect health, by a well-regulated system of diet.

6. Avoid everything—however agreeable to the palate—that from experience you find to disagree with you.

7. Make daily ablution *the first thing on rising*: you will feel stronger and more refreshed for it during the day. I fancy I hear you say that you have not the time to do so. *My answer* to you is, *rise ten minutes earlier*, dip a coarse towel in cold water, wring it out, and rub the whole body over. "Cleanliness is next to Godliness!"

8. Never quack or tamper with your constitution by taking patent medicines: they are offered for every kind of disease, for many of which they are decidedly prejudicial, producing very often fatal results. If slightly indisposed (and if it is possible to do so), remain quiet, avoiding all excitement, and abstaining from all meats and fermented liquors *for the day*. In headache, and slight fever, this plan mostly effects a cure. Never use strong purgatives. If *costive*, take a mild dose of castor-oil; if *too relaxed*, a dose of Gregory's powder (kept at all chemists'); and, five or six hours *after* taking the powder, take the following mixture;—Prepared chalk, 1 drachm; spirit of sal volatile, 10 or 12 drops; cinnamon water 2 ounces; mix.

9. Take exercise, if you value your health, but proportion it to your strength. The mind taints by too long sitting:—

> "Better to hunt in fields for health unbought,
> Than fee the doctor for a nauseous draught.
> The wise for cure on exercise depend:
> God never made his work for man to mend."

10. Never learn to smoke: shun tobacco in all its forms. It stunts the growth, when taken at too early an age: it is a great promoter of indolence and laziness: it causes nervous trembling of the hands, and nervous debility: it has nothing nourishing or stimulating in it, but is merely *a narcotic*, of which the moral and physical effects upon those who use it are of a very dubious character.

11. If you have exceeded the bounds of temperance, or, in plain English, been tipsy, then take the following mixture;—Liquor ammon. acet. ½ ounce; tinct. rhei. 2 drs.; mix the above with a glass of ginger-beer,—and remain sober afterwards.

J. B. N.

COMPETITIONS.

Rickmansworth Cemetery.—Twenty-five designs were submitted to the Board in response to their advertisement: one by Mr. Robert Wheeler has been selected, and the works are to be carried out under his superintendence. Mr. Geen, of University-street, has taken the contract.

Devizes Corn Exchange.—Twenty-six architects have sent in designs, and the choice of the committee has fallen on that of Mr. C. Phipps, of Bath. His design is in the "Roman style," affording an area of 6,000 feet, with three entrances towards the Market-place, and three on the side towards the railway road. The building will be finished before the close of the present year. About 2,100*l.* have been subscribed, but some 400*l.* or 500*l.* more will be required to complete the undertaking.

SALISBURY CHAPTER-HOUSE.

THE elaborate tile paving of the Chapter-house at Salisbury, which was in a miserably dilapidated condition, has been restored by Mr. Minton, with tiles manufactured for the purpose. The endeavour has been to make as true a copy as possible. The general repair of the building is progressing, and if we may judge from the very intemperate animadversions sent to us at different times, has excited some strong personal feelings. Information from other sources, however, has not seemed to us to justify the statements in question. The central column was considerably out of upright, and, to make it perpendicular, the base has been moved slightly out of the centre: it now stands 25 feet 1¾ inch from the west wall, and 24 feet 3 inches from the east wall. The column is almost entirely of the original Purbeck, reinstated. New Purbeck columns have been supplied in all the other parts, viz.,—in the windows under the graining and in the arcades, except where a few of the old shafts were fit for turning afresh. Colour is being used on the stonework and vaulting.

"THE STATE OF ARCHITECTURE ON THE LUNAR SURFACE."

IN reference to the theory broached in our last under this title, and according to which it would appear to be probable that the moon is not perfectly spherical in form, but oblate, with its longest diameter in the line of the radius uniting it with the centrifugal centre, that is with the centre of the earth, and that the centrifugal force which has so operated on its once fluid mass as to produce this peculiarity in form would also centrifugalize any atmosphere and water on its surface to the hemisphere farthest from the earth and hence invisible to it, so that after all, the hemisphere, or portion of the oblong hemisphere, seen by us may be but as it were the desert and barren hill-top of the lunar surface, while all else may be full of life, vegetable and animal, like that on the earth's own surface, except in its desert districts;—it is rather an interesting circumstance, in corroboration of the verisimilitude of this theory, that, since it was broached, the following paragraph from a country newspaper has been brought under our notice:—

"A statement appears in the American papers, that it has been discovered, by calculation, and demonstrated as a geometrical fact, that the moon's centre of form is eight miles nearer to us than her centre of

gravity, through which, of course, her axis of revolution must pass; or, in other words, that *this side of the moon is sixteen miles higher than the other*. A New York paper announces the discovery on the authority of one of the most eminent mathematicians and astronomers in the world; and states that it is about to be declared in a scientific quarter." If such a calculation really has been made, the truth of the theory in question may be said to be proved. It may also be worth while to note another fact that seems to bear upon this question. Certain stars, as they have disappeared behind the body of the moon, have been observed to *hover*, as it were, upon the edge of the lunar disc, and thus to remain visible longer than by strict calculation they ought to have done. Now, on the supposition that there is an atmosphere *behind* the moon, that is on its invisible or outer hemisphere, capable of refracting the light from the star so observed, this hovering seems to be explicable; but *not otherwise*, since no vestige of lunar atmosphere has been observed upon its visible horizon, nor within its disc on the side presented to us. In our previous paragraph on this subject, we may here note, the word "base" was used inadvertently instead of "apex," which would perhaps have been more appropriate as applied to the stony summit of the (*ex hypothesi*) *oblongated* hemisphere, which the moon presents towards the earth.

Notices of Books.

Practical Perspective. By R. BURCHETT, Head Master of the Training and Normal Schools. Chapman and Hall. London: 1856.

ALTHOUGH the number of works on perspective which have issued from the press since the days of Dr. Brook Taylor are almost innumerable, yet great ignorance of its real principles, as well as a want of ready application of its rules, prevails amongst those who ought to be as familiar with it as with the first four rules of arithmetic. This chiefly arises from the form in which the subject has usually been placed before the student, either as a purely mathematical science, requiring an extensive knowledge of geometry, and more thought and study than artist-students care to give to the matter, or else in the form of rules, without any information respecting the principles on which those rules are founded.

It must always be borne in mind that linear perspective is the projection on a vertical plane of any object in nature, by means of lines drawn from the object to the eye which is on the side of the plane opposite to the object. The whole science, therefore, consists in the intersection of planes with planes, and is an extension of the investigation contained in the 11th book of Euclid, with which the student should be acquainted, if he expects thoroughly to master the principles of perspective.

Before attempting to draw from models, or from nature, the student should have some instruction in perspective, through ignorance of which he will be continually making distorted representations of the objects which he attempts to delineate.

The work before us presents the subject in a very lucid form to the student: without wearying him with geometrical problems, it nevertheless gives a thorough insight into the principles of the science, as well as the methods which are most ready of practical application. The plates are numerous, and not overloaded with lines, and may easily be understood.

One important method is omitted, namely, where one vanishing point is near, and the other at a considerable distance, as frequently occurs in practice, in which case the further point may be dispensed with by employing two distinct "lines of heights."

There is a serious error inculcated in Lesson 13, which is devoted to drawing circles in perspective. The method given is correct enough, but the deduction drawn from the figure "that a circle seen in perspective is *not* an ellipse," is untrue, and shows a slip in knowledge of conic sections. The rays of light from a circle to the eye form an oblique cone, every section of which by a plane is an ellipse.

The Railway Question. Practical Suggestions for a Fundamental Reform of the Railway System. By "CIVIS." London: E. Stanford.

RECONSTRUCTION would be a title more appropriate than "reform," for the series of suggestions put forward by the author of this essay. He proposes—

"To bring to a satisfactory adjustment the numerous vexed questions between the railway interest, the Government, and the public," and to create "a basis of arrangements by which railway property can be raised from the zero of depression and the thraldom of insecurity to a fair negociable value and to a position of safety and security, on terms conducive not only to the interest of shareholders, but to that of the public at large."

The steps by which the author tells us we can realize them, involve not merely the reform, but in plain truth the abolition of the present system of railway politics, and the substitution of another, founded on principles entirely different. Looking at the mischief caused by the conflicts between the authority of directoral boards, and that exercised in fits and starts by Government and Parliament, he maintains that the welfare of all parties dictates the surrender to the Government, on equitable terms, of a paramount control over the railways of the United Kingdom. Indeed, he contemplates as the ultimate result, the vesting of all railways in the State.

As equivalents for the paramount power to be ceded to Government, the author proposes, in the first place, the guarantee of a minimum dividend of 4 per cent. on all existing lines, the remission of the passenger duty now paid by British lines, and likewise the remission of all local rates beyond the amount which was paid, by the land now occupied by railways, before such land came into their possession. There would also be a more "symmetrical territorial division than that which now exists, and an extensive recourse to the rate-in-aid-principle, for sundry purposes of utility which are explained and advocated. Some of these purposes refer to borrowing powers, and some to the guarantee of a minimum dividend on approved projects.

When we hear that the capital stock of twenty-five companies, comprising the principal lines in the kingdom, is at present at an average discount of 36 per cent. it becomes evident that the road heretofore taken has not been the right one.

Miscellanea.

NEWS FROM ADELAIDE.—A new Wesleyan Chapel, at Lower Finniss, was opened for Divine service on 24th February. The chapel is built of timber and lime: it is 27 feet by 16 feet in the clear, and stands so that it can be seen from the Murray.——"We have often," says the *Adelaide Observer*, "had occasion to notice, in terms of complacency, the excellence, abundance, and variety of materials, presented to the architect among the uplands of South Australia; and we now regard with much satisfaction a specimen of highly-wrought freestone, from Glen Ewin, which was exhibited at the recent Show of the Agricultural and Horticultural Society, and is now left at our office for the inspection of the curious."

THE PORTSMOUTH FINE ARTS EXHIBITION SOIREE.—The Inauguration Soirée of the Exhibition of Fine Arts in the Museum of the Portsmouth and Portsea Literary and Philosophical Society, was held last week. Above 200 visitors, composed principally of the *élite* of the town and neighbourhood, were present, and great satisfaction was expressed as to the collection of paintings gathered together. Although labouring under the disadvantage of being exhibited by gas-light, says the *Portsmouth Times*, enough was seen to show that the collection contained much that was valuable, both as works of art, and as a means of æsthetical education—of instructing the people in a knowledge of "the beautiful."

OUR STREETS.—I beg to suggest what I think you will deem a ready and practical mode of ascertaining the exact whereabouts of people and places of business whose names or numbers may have for the moment escaped the memory. The plan which has suggested itself to me is, to have affixed to an iron pillar or standard (for which a strong lamp-post would suffice) a "black-board" of proper dimensions at the ingress and egress of each main thoroughfare and principal street, and this to bear (neatly and distinctly lettered) the name, number, and occupation of each firm carrying on business in the same, numerically arranged, so that one might observe their precise *locale* at a glance, and thus escape the annoyance of hearing the next likely-to-know-looking police-officer declare that there is no firm of the name you mention in the street, which assertion you prove to be incorrect, after half an hour's search from right to left, and from odd to even. GO-AHEAD.

NEW APPLICATION OF INDIA-RUBBER.—By an American process coal-tar is mixed with India-rubber, and the compound, it is said, makes one of the most solid, elastic, and elegant articles that can be found in the market. It resembles polished stone, is as black as coal, needs no finish, and has of itself as hard and exquisite polish as it is possible for any metal to bear. There is said to be no end to the articles into which it can be made. Cabinet-work inlaid and mosaic, ornamental to the parlour and the chamber, is composed of it, as are tape-lines, pencil-cases, brushes, canes, boxes, buttons, spectacle-bows, and an endless variety of articles, so that this new use of rubber is likely, it is said, to work a complete revolution in the arts and manufacturers.

SALE OF BUILDING SITES AT NEWCASTLE-UPON-TYNE.—Several building sites to form the west side of the street of approach to the high-level railway-bridge at Newcastle, were put up for sale by auction on Friday last; as also were other sites on both sides of the Quayside-street, No. 1, to be called Headlam-street, and which is to extend from the side to the quay; a site which was devastated by the great fire. There was a numerous attendance of capitalists and others; but, owing to the reserved bid by the town clerk in every case exceeding the sum offered, no sales were effected. The high-level sites, numbered from 1 to 7, comprising 1,067 square yards of ground, were first put up in one lot, at a gross sum, and 2,000*l*. was offered; but the reserved bid was 4,500*l*. The sites were then offered in separate lots. The first consisted of 155 square yards, with the privilege of taking the two sites adjoining at the same price, and 50s. per square yard was offered; but the reserved bid was 70s. For site 4, with the two adjoining, 45s. was offered; but the reserved bid was 70s. Lot 7 was the site of the old Duke of Cumberland public-house, and possessed a license: the area was 180 square yards, and 45s. per yard was offered; but the reserved bid was 5*l*. The Quayside sites were then put up; and for the sites, No. 1 to 7, comprising 1,141 square yards, the sum of 4,200*l*. was offered; but the reserved bid being 10,000*l*. there was no sale. The property was then offered in separate lots. For the first, a site of 200 square yards, as much as 8*l*. 10s. a yard was offered; but the reserve bid was 12*l*. For the second lot (209 yards) there was no bid; and for the third, 5*l*. 10s. was offered, but the corporation reserve was 9*l*. Lot 17 was then put up: it was described as a valuable corner site with two frontages. 60s. a yard was bid, and the reserve was 8*l*. Another site was that of a public-house, but no bid was received.

GAS.—The old Gas Company of Stockton have agreed to sell all their works, plant, &c. to the Gas Consumers' Company, for 10,000*l*. The new company had already proceeded so far in laying out works of their own. By a special condition of the agreement, all the property of both companies shall be offered to the Stockton corporation, and sold them, if willing, as soon as they can obtain authority, at cost price, the companies assisting in obtaining that authority.——The gas consumers of Ware have had a notice circulated amongst them to the effect, that on and after the 1st July, the price of gas there shall be raised from 4s. to 6s. per 1,000 cubic feet. This sudden and unexplained rise of 50 per cent. is giving great cause for discontent amongst the Ware gas consumers.

THE IRON TRADE.—Notwithstanding the admitted downward tendency of prices and depressed aspect of the trade, the iron-masters who held their preliminary meeting at Stewponey, on 26th ult. resolved in the mean time to sustain the nominal prices, on the alleged ground that "the future prospects of the trade are becoming very promising."

THE COPPER TRADE.—A reduction of 2d. per pound in copper is announced. At per ton it has been sold for 107*l*. 10s. instead of 124*l*. and 126*l*. In allusion to this unexpected move of the Swansea rulers of the cupreous roast, the *Mining Journal* says,—"Considering that it was only on Tuesday, June 10, that the monthly meeting of smelters was held, and attended by most of them, who bore testimony to a fair trade being transacted, and gave their vote in support of current rates, it reflects great suspicion on the truth of their statement, and, at the same time, has every appearance of an underhanded, dirty, unprincipled trick; for it is nothing less than deception, which they evidently wish to practice on the trade, by holding meetings at fixed dates, as they assert, for the purpose of regulating prices for the ensuing month, when about a fortnight afterwards they find such a different state of things as to justify them in reducing the value 2d. per pound, these clever men of business not being able to foresee what would probably take place between the 10th and 25th inst." Those capable of playing such tricks, are equally capable of acting from similar motives in keeping *up* the prices, or in raising them when it suits their purpose.

ELECTRO-TELEGRAPHIC PROGRESS. — Professor Giovanni Caselli, of Florence, says *Galignani's Messenger*, has just made a discovery which promises to cast all previous contrivances in electro-telegraphy into the shade. He has invented an apparatus by which the telegraphic wire will transmit to any distance an exact fac-simile of any writing or design, when made to communicate with a similar apparatus at the other station. The transmission of telegraphic despatches by single letters will thus, it is added, be entirely superseded; and the original writing put into the apparatus will be reproduced in an instant, with the signature of the correspondent as if written by himself. It is hopeful, ever and anon, to have such inventions turning up again; but it is a mistake to consider this invention as a new (though it may be an improved) one.——The Magnetic Telegraph Company appealed last week to the Liverpool magistrates against the assessment made upon them for their Liverpool offices. They were assessed upon a sum of 25*l.* for about a mile and a half of wires which passed through some of the streets. The magistrates, after hearing the case, in which it was urged that the wires could not have any real rateable value, made a reduction from 25*l.* to 1*l.*

MASTERS AND WORKMEN AT SHEFFIELD.—For some years Sheffield had become notorious for the ferocity with which workmen occasionally treated both their fellow workmen and their masters. It is to be hoped that a new era is commencing, if we may judge from a paragraph in the local *Independent*, titled, "Three Cheers for the Masters," wherein a correspondent says,—"Sheffield masters and workmen are throwing off their conservative natures and are beginning to look upon each other as men and brethren, in social intercourse with each other. Last week, we observed Messrs. R. Broadhead and Co. electroplaters, of the Britannia Works, along with their workmen and women, rejoicing together at the delightfully-situated sylvan Palace of the Peak, Chatsworth House; and this week, Messrs. Wing and Wharton, file and steel manufacturers, of the Brook Works, have been following their example. This is as it should be. Had this been the case some years ago, long ere this the once prevailing opinion amongst workmen generally that masters were tyrants and the workmen slaves, would have given way to more liberal views, in which the labour protection societies and trades unions would have participated."

RAILWAY MATTERS.—The opening of the London branch of the London and North-Western line from Mumps to Greenfield was to take place on the 4th inst.——The strike of clerks and porters at Liverpool may be said to be at an end, as many of those who struck have quitted Liverpool,—some of them to emigrate, others to go into new employment, while no symptom of relenting has been manifested on the part of the Marquis of Chandos and his co-directors, whose lordly style of treating those so far beneath their level is generally commented on with some severity, and is not likely to lessen the wide interval, or to increase the bonds of sympathy, between the lower and the upper ranks of society. At the same time, the imprudence—nay, the folly, of the strike itself, cannot be defended, but that is no excuse to those who have no "bowels of compassion" for their own fellow-workers of a humble class at a moment when impelled by unbending severity to "kick against the pricks." A great many of the shareholders and merchants interested in the North-Western Line are said to be in favour of the men, and indignant with the policy of the directors in keeping out so many for the sake of 9*l.* a week. Meantime, far more than that sum, probably nine times over, has been sacrificed every day to the prejudice of the shareholders, from the want of experienced and accustomed hands.——By late advices, it appears that the Melbourne and Geelong Railway fast approaches completion. Six of the bridges had been constructed, twenty miles of rails completed, six passenger engines, and twenty-four first, second, and third class carriages, together with trucks, &c. and 400 tons of coke, had been landed at the railway pier at Corio Bay, and the remainder of the rolling stock was shortly expected. The *Melbourne Argus*, in reference to the progress of public works, says,—"If a sufficient supply of labour reach our shores it may be expected that ere long other extensive railway operations may be initiated."

THE MASONS' STRIKE AT CARDIFF.—The Cardiff masons appear to be bent on bringing themselves under the operation of quite another "code of laws" than that by which they lately attempted to bind their masters; three of them, James Dando, John Keif, and Thomas Quin, having been committed at the Cardiff Police Court for trial at the assizes, "for having unlawfully and violently assembled together to disturb the public peace, and with having made a great noise, riot, and disturbance, to the great terror of her Majesty's subjects." This being the usual upshot of such strikes, there is no necessity to enter into particulars.

RAZING RUINOUS BUILDINGS.—At Guildhall, London, on 26th ult. Mr. John Billings, engineer, appeared before Sir William Magnay, on behalf of the joint freeholders of seven houses in Bull's-head-court, Snow-hill, to answer a complaint of the Commissioners of Sewers for not pulling down said houses, which were in a ruinous and dilapidated condition, after notice had been given that they were dangerous to the safety of the public. They had been shored up by the Commissioners of Sewers, but even that was not sufficient for the protection of the public. Sir W. Magnay made an order that the houses Nos. 1 to 7, Bull's-head-court, Snow-hill, should be pulled down at the expiration of a fortnight.

THE CONSERVATIVE LAND SOCIETY. — At the twenty-fifth quarterly meeting of this Society, held the 26th June, the committee announced the purchase of a metropolitan estate in the parish of St. Pancras, at Kentish-town. It was also announced that nineteen leased plots on the Round-hill Park estate, Brighton, would be offered on the 7th of August to the members having rights of choice. These plots had been let for ninety-nine years, at rents varying from 7*l.* to 10*l.* 10*s.* so as to give a return to the members who may select them of 8 per cent. on the purchase-money. It was intimated that offers have already been made to begin building on the Tunbridge Wells estate, the value of which can be estimated by the fact that for four of the 50*l.* plots the rent of 10*l.* per annum has been offered to the holders merely for cultivation.

THE GLASGOW SCHOOL OF ART.—The inspector sent from the Government Department of Science and Art, says a Glasgow paper, has just left Glasgow, after a careful scrutiny of the works, with which he has been much satisfied. It is in this gentleman's power to award thirty medals; and in the Glasgow school he has awarded the unusually large number of twenty-five medals—three students having passed a successful examination in perspective, and also gained prizes, and the works of four art pupil-teachers (five in number) have been sent to the national competition. Thus, thirty-four honours have been taken by Glasgow students, the largest number awarded by the inspector upon his tour of inspection up to the present date. The Glasgow students thus maintain their high character for success in the study of art. Whilst this extraordinary progress is being made amongst designers, pattern-drawers, and artisans, the wealthy classes are not taking the same pains to acquire a useful knowledge of art. This may become a serious disadvantage. It is as important that the young men who are to be future merchants and manufacturers should be trained in art and the laws of taste as that the class which they employ should be so trained.

NEGLECT OF WORK.—As soon as the warm weather sets in, every summer, a series of petty sessions charges against puddlers in the iron districts for neglect of work take place. The heat, we suspect, is one of the real reasons for neglect of this-at-any-time-roasting work; and, although it is but right that workmen should be obliged to abide by their agreements with employers, still there is something painful in the idea of compelling the poor fellows literally to roast themselves alive in a season when there is no possibility of getting a breath of cool air to temper the heat of the furnace. Could not something be done towards rendering such work a little more endurable in the heat of summer, if it must be carried on at such seasons? But why should not puddling in summer heat be regarded as an impracticability like building or plastering in frost or wet?

THE LANCASHIRE AND YORKSHIRE RAILWAY COMPANY AGAINST THE EAST LANCASHIRE RAILWAY COMPANY.—The long-pending dispute between these companies, as to the amount of toll payable by the latter company for the use of the Clifton and Manchester Railway, previous to their becoming joint owners of that line in 1853, was decided by the House of Lords on Monday last. The question involved a sum of about 30,000*l.* claimed by that company for extra toll. Unanimous judgment was given in favour of the East Lancashire Company, entirely disallowing the claim.

ST. JOHN'S CHURCH, KENILWORTH.—May I correct a mistake into which I fell (not from carelessness, but from the too long delay in the answer to a note of inquiries which I wrote to Kenilworth), in my paper "On Colour in Building Materials," read at St. Albans, and reported by you in your last number? St. John's Church, Kenilworth, is not of *red sandstone* rubble, with white sandstone dressings; but of the much better combination in every respect, *Hartshill* rubble, and white sandstone dressings. The *red sandstone* is used only in the foundations. You have supplied (which I did not) the name of the architect, which makes it a point of justice to correct my mistake: moreover, the combination is so good, that it ought to be properly stated, by way of example.

GEO. AYLIFFE POOLE.

THAMES EMBANKMENT FROM VAUXHALL TO BATTERSEA.—Lord Chelsea, M.P. Mr. Tite, M.P. Mr. Fielder, churchwarden, Mr. Perry, Mr. Strickland, and Mr. C. Lahee, vestry clerk, as a deputation from the parish of St. Luke's, Chelsea, waited on Sir B. Hall on Tuesday, in reference to the Thames embankment from Vauxhall-bridge to Battersea. The deputation having been introduced by Lord Chelsea and Mr. Tite, the latter gentleman proceeded to explain to the right hon. baronet the vast public utility which must result from the completion of the Thames embankment to Battersea. Sir B. Hall said he thought they could not proceed with this work without another act of Parliament, and what he proposed was this: he had caused instructions to be given to the surveyor to make a report to him on the subject. As soon as that report was presented to him he should send it to the Treasury, and ask for two things: first, if he had the power to carry the work into execution; next, for money to do so. And lastly came the great question—if Parliament would grant what was required. He, for one, was quite ready to carry it ont, if means were placed in his hands to do so, or if he had the power. As at present advised, what he should do was this: as soon as he received the report of the surveyor he should see the deputation again on the subject.

THE SCOTTISH SOCIETY OF ANTIQUARIES.—At the seventh ordinary meeting of this society, held at Edinburgh last week, a paper was read by Mr. A. H. Rhind, "On One of the Simple Forms of Burial in use among the Ancient Egyptians, observed in a recent excavation at Jeezeh." In this paper, Mr. Rhind described two connected tombs recently excavated by him, situated near the Great Pyramid of Jeezeh. It appeared that the interments had been made in underground chambers of about 3½ feet in length, and that the bodies had been huddled up as they seem to have been in many cists in Scotland. Mr. Rhind pointed out some features common to the primitive interments of various nations. At the same meeting, a paper, entitled "Notes of the Life of Swein Aslief, an Orkney Viking of the Twelfth Century," was presented by Mr. W. H. Fotheringhame, F.S.A.S.

ADDITIONAL CHURCHES IN LONDON.—It is proposed to vote, this year, the sum of 10,000*l.* as a contribution in respect of the revenue derived from the Crown estates in the metropolis, towards the formation of a fund for building additional churches and parsonages in London.

MAMMOTH TREE FROM CALIFORNIA.—We have already mentioned the grove of gigantic trees found in the vicinity of the southern mines, and that a part of one of them was in England. This has now been set up in the Adelaide Gallery, Strand, for want of a better place, and has a very remarkable effect. The whole height of the tree was 363 feet; height to the first limb, 140 feet; diameter at base, 31 feet; diameter a hundred feet from the base, 15 feet; thickness of the bark at base, 18 inches, and varying from that down to 12 inches all over the trunk.

PRIOR PARK, AT BATH.—The Prior Park estate, near Bath, lately occupied as the Great Roman Catholic College, was put up to sale, at the Auction Mart, at Bath, on Tuesday in last week. The mansion was formerly the residence of Lord Hawarden, and is constructed with Bath stone, with extensive wings, having a grand portico to each principal front of lofty Corinthian columns, with mahogany and stone staircases and mahogany doors. The wings, designated as St. Peter's and St. Paul's, contain the chapels, dormitories, lecture-rooms, theatres, refectories, &c. and they are lighted with gas. There are several springs of pure water, an observatory, an ornamental cottage known as the Priory, a complete gymnasium, some valuable stone quarries, &c. The estate comprises nearly 200 acres, chiefly pasture land, enclosed in a ring fence, in the midst of which are fishpools, bridges, ornamental plantations, &c. The auctioneer stated that the estate was worth at least from 150*l.* to 200*l.* an acre, and that about 40,000*l.* had been laid out on the mansion. He asked for an offer of 30,000*l.* and went down to 20,000*l.* This sum was bid by a person in the room. Sums were offered up to 27,750*l.* at which bidding there was a stop. The auctioneer added 50*l.* and finally announced that the property was not sold.

GEELONG SURVEYORSHIP.—Mr. R. C. Young, builder, formerly of Gateshead, has been appointed town surveyor of Geelong, in the colony of Victoria, at a salary of 300*l.* a year. Mr. Young, it will be remembered, was a candidate for the same office in this town. He has been more successful at the antipodes.—*Gateshead Observer.*

BIRMINGHAM BRONZE CASTING.—The casting of a colossal equestrian statue of Lord Hardinge, the commander-in-chief, by Messrs. Elkington, Mason, and Co. was completed on Friday last. The statue, which weighs upwards of three tons, was modelled by Mr. J. H. Foley, A.R.A. and is destined for Calcutta.

STAINED GLASS.—A stained-glass window, to the memory of the late Rev. Henry Fardell, vicar of Wisbech, and one of the canons of Ely, has been placed in the north aisle of Ely Cathedral. The subjects in the two east openings are the six virtues,—"Hungry, and ye gave me meat," &c. In the others are the wise and foolish virgins. The work was executed by Mr. Ward, of London. At the entrance of the south aisle a screen with folding-doors, by Mr. Skidmore, of Coventry, has been put up.——The remainder of the glass from the old east window of Holy Trinity Church, Coventry, has been put in the windows of the south aisle; and in the south transept window a compartment has been put in by Dr. Phillips, in memory of his late father, Mr. E. Phillips, F.S.A. The subjects are,—the Crucifixion; Bearing the Cross; an Angel, in the centre; the Pelican; and the arms of the late Mr. Phillips. This church has now six windows partly filled with stained glass. At St. Michael's, the window at the east end of north aisle, in memory of the late Col. Grosvenor Hood, who fell in the trenches before Sebastopol, is about to be ordered.

PRESERVATION OF STONE.—A petition has been presented to the House of Commons, by Mr. Ewart, from Mr. John Benjamin Daines, stating that a preparation invented and patented by him had been successfully applied for the preservation of certain decaying portions of the stonework of the New Palace of Westminster, offering a license to continue the same, and praying that the application of the material may proceed beyond August next, when the two years appointed to test the success of the experiment will expire.

MORE PUBLIC FOUNTAINS AT LIVERPOOL.—In 1854 seven drinking-fountains were erected by Mr. Charles Melly, at his own expense, in the most crowded thoroughfares of Liverpool,—chiefly those near the docks. So greatly are these fountains appreciated, that on an average 1,976 persons drink daily at each,—in one case the number of drinkers being more than four persons each minute of the day. The corporation of Liverpool having refunded a portion of the cost, Mr. Melly, says the local *Journal*, has recently, at his own expense, erected fourteen additional drinking-fountains, two of cast-iron and twelve of polished Aberdeen granite. The stream of water pours from the mouth of a bronzed head into a basin, and the fountains are furnished with galvanized iron ladles. The granite for the fountains was supplied, at first cost, by Mr. A. McDonald, of Aberdeen. The water committee have supplied a constant flow of water to most of these lately erected fountains, and we believe they do not intend making any charge. So soon as water is obtained from Rivington Pike, Mr. Melly intends erecting twelve or fifteen more. It is much to be desired that some benevolent Mr. Melly would start up in London: sure we are that the names of such benefactors, engraved upon the fountains and ladles which they might contribute, would be held in grateful remembrance and celebrity for generations by tens of thousands of the daily traversers of London streets and parks. The want of such conveniences everywhere in London is disgraceful to the authorities and the Government, and contributes more than anything else probably to fill the beer-shops and gin-palaces, especially on Sundays and holidays, when the families of the working classes are walking to and fro in the heat of summer, or indeed at any season of the year.

TENDERS

BRUSHES.—J. JEFFCOAT, from Messrs. Kent and Co's, many years a Practical Manufacturer of Painters' and Artists' Brushes, can now supply them at such prices as cannot fail to ensure the favour of all who wish to obtain a genuine article.—Samples may be had at the wholesale price.—Copper-bound distempers, 31s. per doz. the usual price 60s. per doz. at the Factory, 9, Middle Queen's buildings, Brompton-road.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to H.M. Majesty's Honourable Board of Ordnance.

NORWICH UNION FIRE INSURANCE SOCIETY.

(Amount Insured, £4,000,000.—Duty, 74,766.)

NOTICE.—That a BONUS has been declared upon all Premiums paid between the 24th of June, 1851, and the 23rd of June, 1855 which may be received on application at the Society's office, at the respective quarters at which the Policies are renewable. The BONUS will be equal to a reduction of 28 per cent on the current Premium to persons insured during the whole of the above period.

Insurers claiming returns upon lapsed or cancelled Policies, are requested to bring the Numbers of the Policies under which they claim.

6, Crescent, New Bridge-street, Blackfriars.—June, 1856.

THE STANDARD LIFE ASSURANCE COMPANY,

Established 1825. Constituted by Acts of Parliament.

6, St. Andrew Square, Edinburgh.

His Grace the Duke of Buccleuch and Queensbury, K.T. PRESIDENT.

The Right Honourable the Earl of Elgin and Kincardine.

LONDON

CHAIRMAN OF THE BOARD.

The Right Honourable the Earl of Aberdeen.

ORDINARY DIRECTORS.

Thomas H. Brooking, esq. 14, New Broad-street.
John Griffin Frith, esq. Austin Friars.
Alexander Gillespie, esq. Lombard-court.
Alexander Macgregor, esq. Upper Wimpole street.
John Scott, esq. 4, Hyde-park-street.
Sir Anthony Oliphant, C.S.
Francis Le Breton, esq. 3, Crosby-square.

MANAGER.—Will. Thos. Thomson, F.R.S.E.
RESIDENT SECRETARY.—H. J. Rokes Williams.
INSPECTOR OF AGENCIES.—William Bentham.

EDINBURGH, 3, George-street.
LIVERPOOL.—82, King William-street.

THE NEW BUSINESS transacted by this Company during 1855 exceeded that of any Assurance Institution in the United Kingdom, the Sums proposed for Assurance during the year being £716,368 7 11
And the Assurances accepted 609,323 7 11

A BONUS was declared on 1st May, 1856, varying from 27s. 10s. to 18s. per cent. on the sums assured. This was the Fifth Declaration of Profits.

EXAMPLES OF BONUS.

Date of Policy.	Sum in Policy.	Total Bonus Addition to 1855			Sum in Policy with Bonus Addition.		
15th Nov.	1825	£1,000	£1,132	0	0	£2,132	0 0
"	1840	1,000	667	1	0	1,667	1 0
"	1845	1,000	582	0	0	1,582	0 0
"	1850	1,000	347	0	0	1,347	0 0
"	1849	1,000	774	10	0	1,774	10 0
"	1850	1,000	64	1	0	1,064	0 0

The Income of the Company is about a Quarter of a Million.

NON-FORFEITURE OF POLICIES.

Important resolutions have been adopted as to Non-Forfeiture of Policies within the ten months from the date of payment of the premium under certain conditions.

SELECT ASSURANCE COVERING FOREIGN RESIDENCE WITHOUT EXTRA PREMIUM.

Policies of five years' duration are admissable to this class at the discretion of the Directors.

SURRENDER VALUES.

A Liberal Surrender Value is allowed after payment of One Annual Premium for Policies on the With Profit Scale, and after Three Premiums on the Without Profit scale.

Persons proposing to effect Assurances are invited to examine these important and peculiar conditions by applicant on to the Company's Office, where the fullest information may be obtained.

H. JONES WILLIAMS, Res. Sec.

London, 83, King William-street.

Copies of the Report of the Proceedings at the Meeting of 1st of May, 1856, are now ready, and can be had at the Office.

ANCHOR ASSURANCE COMPANY, for LIFE, FIRE, ANNUITIES, and ENDOWMENTS.

Capital—ONE MILLION. Established 1842.

Chief Offices, 57, Cheapside, London.

Chairman—WILLIAM LEE, Esq. M.P.

Every description of Life and Fire Assurance, Annuity and Endowment Business, transacted at the most moderate rates of premium. Fire Risks covered, and Policies granted with all charge.

THOMAS CAVE, Managing Director.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY. Established 1831.

The Annual Meeting of the above Society was held in Edinburgh on the 6th MAY. The report by the Directors stated that the number of policies effecting fire year ending 31st MARCH last, was 674, the sums assured thereby being 293,151; and the annual premiums thereon, 9 139.

The result of the investigation for the triennial division of profits was then announced. The surplus ascertained to have arisen amounted to 183,339, which wholly belongs to the members, but of which one-third (61,27 L) must, by the laws of the society, be set aside as a reserve for contingencies, leaving 122,226 for the next triennial division.

The Investing Funds of the Society amount to £2,925,281
The Annual Revenue to 160,400
The Existing Assurances to 4,764,949

Copies of the report may be obtained at the Society's Offices, 26, St. Andrew-square, Edinburgh; at the London Office, 126, Bishopsgate-street Within; and at any of the Agencies.

ROBERT CHRISTIE, Manager.

SOLICITORS.—Messrs. Dawes and Sons, Angel-court.

Insurances against loss by fire are effected by the PHŒNIX COMPANY upon every description of property, in every part of the world, on the most favourable terms.

Persons insuring with the Phœnix Company are not liable to make good the losses of others, as is the case in some offices.

Insurances with this Company expiring at Midsummer must be renewed within fifteen days thereafter, or they will become void.

Receipts are now ready at the principal offices, Lombard-street, and Charing-cross, and with the respective Agents throughout the United Kingdom

THE ASYLUM LIFE ASSURANCE OFFICE, 72, CORNHILL, LONDON.

Established 1834.

Policies on healthy and diseased lives, at home and abroad, for civil, military, and naval employments.

The Office being on purely proprietary principles, no partnership among policy-holders is allowed.

For prospectuses, proposal papers, &c. apply to
MANLEY HOPKINS, Resident Director.

THE LONDON and WESTMINSTER BANK issues CIRCULAR NOTES of 10l. each, payable at every important place in Europe. These notes are issued without charge, and they are cashed abroad free of commission. The Bank also issues, free of charge, Letters of Credit on all the principal cities and towns in Europe. These letters of Credit are issued only at the Head Office in Lothbury. The Circular Notes may be obtained at the Head Office in Lothbury, or at any of the Branches, viz.:—

Westminster Branch, 1, St. James's-square.
Bloomsbury ditto, 214, High Holborn.
Southwark ditto, 1, Wellington street, Borough.
Eastern ditto, 87, High-street, Whitechapel.
Marylebone ditto, 4, Stratford-place, Oxford-street.
Temple Bar ditto, 217, Strand.

The rate of interest allowed on deposits of 500l. and upwards, at the Bank or any of its Branches, is now 3l per cent.

J. W. GILBART, General Manager.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the terms Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by venders of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and Co. Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Driving-bresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, at JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAY MOND JARVIS, Bart., YENTNOR, ISLE of WIGHT. —Second Testimonial.—"March 10th, 1853.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

½	¾	1	1¼	1½	2	2½	3 in.
9d.	11d.	1s.	1s. 3d.	1s. 6d.	1s. 9d.	2s.	2s. 3d.

2½	3	3½	4	4½	5	6	inches.
2s.	2s. 3d.	2s. 6d.	2s. 9d.	3s.	per yard.		

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

½	¾	1	1¼	1½	2	2½	3 inches.
6d.	9d.	11d.	1s.	1s. 3d.	1s. 6d.	per yard.	

The hose is Burnettized at an extra charge of 3d. per yard Union Joints, Branch Pipes, and Jets, are also supplied.

FOUNDRY and SMITH'S BUSINESS.—TO BE LET, a SMALL IRON and BRASS FOUNDRY, with SMITH'S BUSINESS, in the country, in full work. Fixtures and plant at valuation; coming to moderate; rent low.—Apply, by letter, to A. Blue Minories, London.

AN old-established BUILDER'S, PLASTERER'S, and SLATER'S BUSINESS, within twenty miles of London, TO BE DISPOSED OF, with immediate possession. Low rented, on an unexpired term for nine and a half years. The stock to be taken at a valuation—about 2,000.—For further particulars, apply to CHARLES DAVY, Upholsterer, High-street, Watford, Herts.

WINCHESTER.—To PLUMBERS, GLAZIERS, and PAINTERS.—TO BE DISPOSED OF, a BUSINESS in the above line, established upwards of forty years; and from very convenient premises, with comfortable residence, may be rented on moderate terms. The situation is excellent, and, from the present proprietor's advanced age, every means is afforded for considering the entire trade at present occupied. The stock, which is very neat, and requisites of trade, may be taken at valuation. For further particulars, apply to Mr. GODWIN, Piazza, Winchester.

TO FURNISHING IRONMONGERS, WHITESMITHS, BELL-HANGERS, GAS-FITTERS, &c. TO BE DISPOSED OF forthwith, an eligible CONCERN in the above trades in a populous village about twenty miles from London, with a prospect of immediate railway extension. A great increase of building is anticipated. In the first instance, address letters of inquiry to A. Z. care of Mr. Weakley, Stationer, No. 91, Farringdon-street, London.

IRONMONGERY BUSINESS.—FOR DISPOSAL, a first-class BUSINESS, doing an extensive and lucrative trade in brick and furnishing ironmongery. The returns are about 10,000 per annum, a considerable proportion of which is for cash. The premises are in a commanding situation, in one of the leading thoroughfares in London, and a large sum of money has been expended within a few years in rendering them externally attractive, and in adapting the interior completely for the various branches of the business. The stock is all modern, and of the best description. About 10,000l. will be requisite to purchase and carry on the concern, 5,000l. of which may remain on security for two years; and to two or three active young men, who can command that sum, an opportunity is thus presented of purchasing a business, which is of the first class, of a high reputation, and capable of still further extension.—Apply (by letter only) to Messrs. FULLER and HORSEY, 13, Billiter-street, City.

TO POTTERS, BRICK-MAKERS, and OTHERS.—TO BE LET, ELEVEN ACRES of LAND, containing pipeclay, brickearth, loam, and fine sand, situate in a very desirable part of Hants, within a short distance of the most important commercial towns. The whole of the buildings, machinery, plant, and advantages to be Let, on moderate terms, or taken at a fair valuation.—For further particulars, apply to Mr. S. BROAD, 53, Above-bar, Southampton.

TO MANUFACTURERS and OTHERS.—A Gentleman, of mercantile experience and good connections, is desirous of meeting with a Gentleman commanding a capital of not less than 10,000l. to be invested in a sound and profitable Manufacturing Business of the most legitimate character. Principals apply to Mr. ELMSLIE, Solicitor, 47, Moorgate-street, City.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

31 George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and Co. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to su ply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling purposes, decorations &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, burnt and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 30, Old Broad-street, London; to Mr. MUNDAY, 1, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKS.

Agents in London, Messrs. GEORGE POTTER and CO. Limemerchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 10, North-wharf-road, Paddington.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality. Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms. Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 62, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

PORTLAND and BATH CEMENTS. TATHAM and CO. 14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT. Glazed Stoneware Sewage Pipes. Brick, Lime, and Cement Merchants, TATHAM and CO. 14, South Wharf, Paddington.

PARIAN CEMENT, reduced to 3s. per bushel, from 1st inst. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any add mixture of colour.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which their manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in large quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 8 9d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

JOHNS and CO.'S PATENT PERMANENT SILICATED WASH (perfectly non-absorbent STUCCO), CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead; whilst the consumption of material is less than for one coat. It dries very fast and hard.

HUBBUCK'S STONE COLOUR BODY PAINT the same as the former, at three-fourths the price.

HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and iron exposed to salt water; neither bilge water, nor noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages, stamped, HUBBUCK, LONDON. PATENT; and when so marked the quality is guaranteed.

HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Timber coated with this Enamel is not attacked by the worm neither do barnacles attach to it.

Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.

OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either as his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT. PLASTER of PARIS Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs, Warehouse, No. 1, Wharf Paddington-basin

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal guager's pass, by which the purchaser may know the exact weight delivered. Orders addressed to the London Depôt, 16, South Wharf, Paddington, J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southam, Warwickshire.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick

CHARLES RICHARDSON, 3 & 5, SOUTH-WHARF, PADDINGTON BASIN. COWLEY AND KENT BRICKS. PORTLAND, ROMAN, AND OTHER CEMENTS, TAMWORTH GLAZED SEWAGE PIPES BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 5 South Wharf, Paddington.

NOTICE.

CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.

All applications for prices and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

PLASTER of PARIS manufactured by J. P. BLYTH, Baldwin's-place, Gray's-inn-lane, Holborn. The trade and shippers supplied on advantageous terms. Roman and Keen's Cement, Tiles, Plasterers' Hair, Pan and Plain Tiles, Fire Goods, &c

THE BEST HERTFORDSHIRE MALM SECONDS;

WHITE SUFFOLK PERFORATED BRICKS;
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for ashpaths, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 600 tons can load along-side the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation

General Office—No. 13, GEORGE-YARD, LOMBARD-STREET.

Letters addressed to Grays Essex, will meet with immediate attention.

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane, Dulwich. Price of good stock bricks, 25s. per thousand on the field, for cash.—Application to be made to the Foreman, A. BANHAM, at the Works.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. R. D earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing

Apply to HENRY DODD and CO. at the Countinghouse, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

TO CONTRACTORS.—The MEDWAY BRICK COMPANY are now ready to SUPPLY BRICKS from their Brickfields at Cuxton, near Strood, on the Medway, at the ordinary market prices. The superior quality of the Bricks made at the above works is well known to consumers.—Samples may be seen, and further particulars obtained on application to the Manager, at the Office of Messrs. G DENNY and CO. 29, Great St. Helen's, London; or at the Works.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented

HENRY C MOUNT, Sec.
37, King William Street, City.

THE PRIZE MACHINES of the UNIVERSE.—CLAYTON'S PATENTS.—CLAYTON'S PRIZE BRICK and TILEMAKING MACHINES will be EXHIBITED in OPERATION, during the Show of the Royal Agricultural Society of England, at Chelmsford, on the 15th, 16th, 17th, and 18th inst. month JULY.—Manufactory, Atlas Works, Upper Park-place, Dorset-square, London.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES.
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT.
J. B. LAWES, 1, Adelaide-place, London-bridge.

This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, affording a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.

Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles (delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPÔT for this WARE is REMOVED to No. 28, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Reviewers on Juries," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

H. and R. HAYWOOD, Brownhills Blue Metallic Tileries, near Burslem, Staffordshire; London Depôt, 15, South Wharf, Paddington, Manufacturers of Improved Plain and Ornamental Roofing, Ridge and Hollow Tiles, for Churches, &c.; also Metallic Plain and Socket Sewerage Pipes, &c. adapted for sanitary and Railway purposes. They are extensively used on the London and North Western, Great Western, Trent Valley, North Staffordshire, and other Lines of Rail, and highly approved. Warranted impervishable, and to resist all acids and exhalations.

*** A FIRST-CLASS MEDAL was awarded to H. and R. HAYWOOD, by the Jury of the GREAT EXHIBITION.

HOGG'S GARDEN EDGE TILES.—The attention of persons engaged in laying out Gardens for Public Institutions is solicited to these Tiles, as an elegant, cheap, and permanent substitute for box edging. In colour they resemble Bath stone, are very hard, easily laid down, afford no shelter for vermin, and act as a drain to the paths. Price 13s. per 100, or about 4d. per yard run.—Full particulars on application to R. BLACKET, Witham, Essex.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSLEY'S WHOLESALE WAREHOUSE, 32, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, at THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFERY, ALLEN, and CO. beg to inform the trade, they have a large selection of Paper-Hangings of their own manufacture, of all qualities, and at very low prices. They confidently invite attention to their best papers, which in price, style, and colouring, are equal to any that can be manufactured.—J. A. and CO. are the sole proprietors of the Gutta Percha Paper, an efficient remedy for damp walls.—Factory, 115, Whitechapel; Show-room, 509, Oxford-street.

PAPER HANGINGS! PAPER HANGINGS!! PAPER HANGINGS!!!—Builders, the Trade, Country Dealers, and others, will find an immense STOCK and endless variety of all classes of PAPER HANGINGS, at ROBSON'S MANUFACTORY, 20, Lowther Arcade, Charing-cross, London. Splendid new designs, both in machine and block printing, not to be surpassed by any house in England. Patterns sent for approval in town or country. Cheapest house for panel decorations. Terms, Cash.

PAPER-HANGINGS.—To BUILDERS, PAINTERS, and the TRADE generally.—THUMBLE and CO. Manufacturers, Leeds, beg to call the attention of the trade to their immense STOCK of PAPER-HANGINGS, at No. 3, Oxford-street, London, consisting of Gold, Flock, Satins, Oaks, Marbles, Granites, and Machine goods. The whole being their own manufacture, can supply on the very best terms.

A. W. FABER'S POLYGRADE BLACK LEAD fine RED and BLUE PENCILS, and superior CRETA LÆVIS, to which were awarded the Prize Medals from the Great Exhibitions of All Nations, London, 1851, New York, 1853, Munich, 1854, and Paris, 1855, are sold by every respectable stationer and Artists' Colourman in town and country.—Sole Agent, A. HEINTZMANN, 25, Ironmonger-lane, City.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 23 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'S Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt may be seen at the Factory, also the new Vice-Chancellor's Courts the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

TO CAPITALISTS SEEKING INVESTMENT, &c.—Any Gentleman with a capital of from 5,000l. to 25,000l. might become sole or joint proprietor of a very valuable property, in a most desirable situation, already producing a large fine rent, and capable of great increase, both in value and rental; and if disposed to become part proprietor and take an active part, with profitable occupation and suitable residence, arrangements will be made.—Principals or their solicitors only will be treated with, who will be furnished with full particulars by letter, addressed O. P. Messrs. Parkins and Gotto, Stationery Warehouse, 24 and 25, Oxford-street.

MORTGAGES of ROCHESTER-BRIDGE ESTATES.—LOAN REQUIRED.—The Wardens and Assistants of Rochester-bridge will be ready, on THURSDAY, the 24th day of JULY, 1856, at their AUDIT-CHAMBER, at Rochester, in Kent, to open and consider TENDERS or PROPOSALS from persons willing to advance 10,000l. or any part thereof, in sums of not less than 100l. each, to be secured with interest payable half-yearly, by transfer by mortgage of the estates proper of the Bridge Corporation, in the prescribed form, and under the regulations and provisions of the Rochester-bridge Acts, 1846 and 1853, affecting such loans, and the repayment thereof. All sums so advanced are to be paid within one week next after the acceptance of the proposal shall have been notified to the party making the same. Further particulars and extracts from the Acts may be obtained on application to me. Proposals, in sealed envelopes, marked "Tender for Mortgage," stating the amount offered to be advanced, and the rate of interest required, may be sent to me at any time previous to ELEVEN o'clock in the forenoon of the said 24th day of JULY, 1856.

By order of the Wardens and Assistants,
GEORGE ESSELL, Bridge Clerk.

The Precinct, Rochester, June 30, 1856.

The clay obtained from the pits on the island of Branksea is of the finest quality, and the goods are manufactured by men of long experience in the trade, with the aid of powerful machinery. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.

A list of prices forwarded free on application to Mr. T. G. BECK, at NEW WHARF, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. M. PETTS, at the Works, Branksea Island, Poole, Dorset.

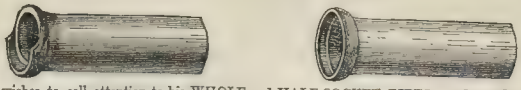
GREAT REDUCTION IN PRICE OF DOULTON'S DRAIN-PIPES.

HENRY DOULTON AND CO.

Beg to inform Builders, Contractors, and others, that they have made a considerable REDUCTION in the PRICES of their

GLAZED STONEWARE DRAIN-PIPES,

Drawings and Prices will be forwarded on application.



MANUFACTORIES: HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE and SMETHWICK, near BIRMINGHAM.

OFFICES: HIGH-STREET, LAMBETH, LONDON.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

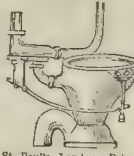
Also to his IMPROVED REGISTERED CLOSET PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

UNDERHAY'S PATENT REGULATOR CLOSETS

for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.



These Stop-valves are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by CHARLES BOTTEN and SON, Brass Founders, Crawford-passage, Clerkenwell, London.

PATENT SELF-ACTING WATER-CLOSETS,

with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s., and perfect action guaranteed.

STONE-PIPES.—GLAZED STONEWARE

PIPES of the most superior quality, at REDUCED PRICES. E. and W. STURGE invite particular attention to their stock of these goods, which continue to give great satisfaction both as to manufacture and price, a list of which will be sent upon application. An increased discount will be allowed to large contractors. Every description of junctions, bends, &c. in stock. Yorkshire paving, sinks, sills, steps, and coping, &c.—E. and W. STURGE, Bridge-wharf, Pitt-road.

PATENT DRAIN-PIPES, UNGLAZED,

manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine-Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at			3d. per foot.
4	"	"	4d. "
6	"	"	6d. "
9	"	"	9d. "
12	"	"	1s. 3d. "
15	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

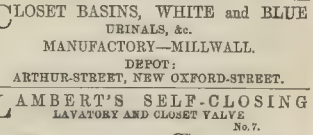
TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES,

acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

CLOSET BASINS, WHITE and BLUE URINALS, &c.



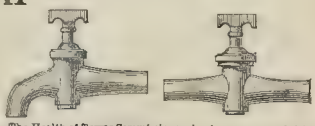
MANUFACTORY—MILLWALL.

DEPOT:

ARTHUR-STREET, NEW OXFORD-STREET.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

No. 7.



is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

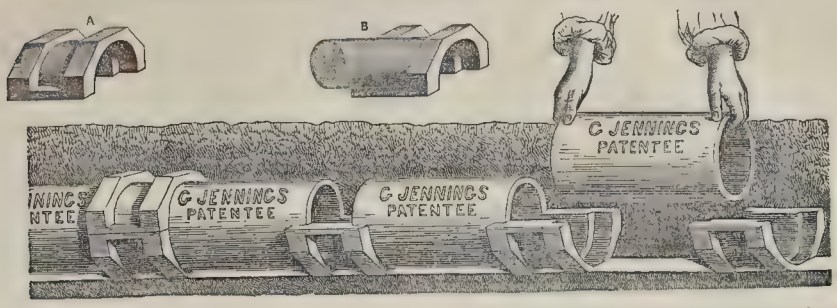
THOS. LAMBERT and SON, Brass Founders and Engineers, Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price complete, 13s. 6d. each.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.



LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

ROYAL POLYTECHNIC.—Patron, H.R.H. Prince ALBERT.

—On Monday evening, July 7, at Eight, Henry Mayhew, esq. author of "The Great World of London," &c. will Lecture on the Successes of Industry.—On Monday, Wednesday, and Friday, at Four and Nine, the Grand Series of Views after David Scott, as published by Fullarton and Co. illustrating Bunyan's Allegory of the Pilgrim's Progress, with descriptive Lecture by the Rev. J. B. Brasted.—On Tuesday, Thursday, and Saturday, at Three, Lecture by J. H. Pepper, esq. on the Moon Controversy.—On the same days, at Four and Nine, the Historical Entertainment of Kenilworth; and at half-past Three and Eight, Performances by Mdlle. Maudie on the Cither, and Herr Arlom on the Child's Mouth-organ.

JENNINGS'S PATENT DRAIN-PIPES.

THE PATENT CHAIRS AND SADDLES above shown are to a line of pipes the SAME SUPPORT AS SLEEPERS TO A LINE OF RAILWAY, the base of each Chair being BROAD and STRONG. The pipes are simple cylinders, of uniform thickness, made without the usual socket; the drying and burning, in consequence, is much more perfect. Pipes thus made and connected will be found to BEAR ANY PRESSURE, and are in no way liable to derangement. The laying of these pipes, and the making of the joints, IS DONE AT ONCE, EACH PIPE BEING BEDDED AS IT IS LAID, and the space between allows the workman to strike up the joint, and the superintendent TO SEE that every pipe is ACCURATELY LAID and PROPERLY JOINTED.

A shows one of JENNINGS'S PATENT SADDLES OR COVERS, by means of which examinations are effected; B shows one of the PATENT JUNCTION COVERS, by which connections are made to finished lines of pipes, it being only necessary AT ANY TIME to remove a PLAIN Cover or Saddle, A, and substitute a Junction Cover, B, the Junction being THE SIZE of the Branch Pipe.

The favour with which these pipes have been received will no doubt give rise to many imitations, as it is much easier to COPY than to INVENT; but GEORGE JENNINGS hopes his sanitary patrons will give HIM CREDIT for being THE FIRST TO SHOW HOW JUNCTIONS MAY BE INTRODUCED, OR EXAMINATIONS MADE, TO FINISHED LINES OF PIPES. These important improvements, as above shown, are PATENTED; and GEORGE JENNINGS would caution those who desire TO PROFIT BY HIS IDEAS, NOT TO INFRINGE HIS PATENT RIGHTS, as they will not be allowed to do so with impunity, although he feels confident the ORIGINAL, for its SIMPLICITY and EFFICIENCY, will be preferred to any copy.

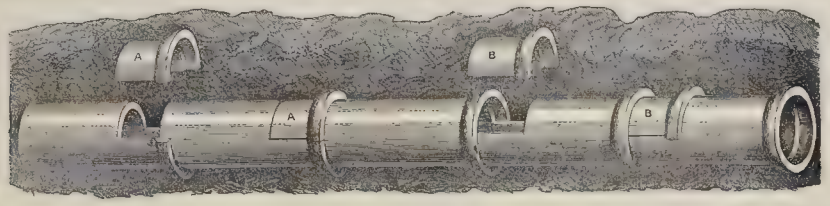
Prices of JENNINGS'S Drain Pipes, per foot run, including the Patent Chair and Saddle, are as follows:—4-inch, 6d.; 6-inch, 8d.; 9-inch, 1s. 1½d., 12-inch, 1s. 10d.; 15-inch, 3s.; 18-inch, 4s.; with the usual discount to the Trade.

JENNINGS'S PATENT DOUBLE-SEATED VALVE-CLOSET.

Architects describing this Closet in their specifications will have a PERMANENTLY GOOD VALVE CLOSET, NOISELESS, and FREE FROM COMPLICATION. The Patentee has such confidence in its DURABILITY and EFFICIENCY, that he will guarantee every Closet for SEVEN YEARS.

JENNINGS'S IMPERISHABLE EARTHENWARE CLOSET AND TRAP.

This Closet has a large water surface, has no back to soil, is imperishable in its material, and the Trap and Closet is combined in one piece, suited alike for the PALACE or the COTTAGE.



JENNINGS'S IMPROVEMENTS IN LIFT AND OTHER PUMPS.

These Pumps would well repay a visit to Jennings's factory, where may be seen Jennings's Lavatories, Urinals, Sluice Valves, Fire and Steam Cocks, of every size; Shop-Shutter Shoes; Gully, Area, and Sink Traps, and other sanitary goods.

Or Illustrations and Prices can be had free by post, if two stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

AYLESFORD POTTERY COMPANY'S PATENT DRAIN-PIPES.

THE above Company respectfully invites the attention of Engineers, Architects, Surveyors, Builders, &c. to an improved DRAIN-PIPE, whereby all stoppages may be cleared without disturbing the invert of the drain, by simply removing the cover (marked A or B) whichever may be preferred.

The cover (marked B) may be used in conjunction with whole or half-socket Pipes.

Pipes thus constructed may be laid at intervals in a drain of ordinary Socket-Pipes.

With the great advantage these Pipes offer, they are cheaper than any yet submitted to the public.

London Depôt—AYLESFORD WHARF, Belvedere-road, Lambeth.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

EXTENSIVE REDUCTION IN PRICES.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET.

HALF SOCKET.

WHOLE SOCKET.

Manufacturers of every description of Sanitary Glazed Sewage Pipes, Bends, Junctions, White Glazed Closet Pans, Gas Retorts, Furnace Blocks, Crucibles, Fire Clay, &c. &c.

The Fire Bricks made from the Clay of this estate have been tested, and proved to be in every respect equal to those of Stourbridge and Newcastle.

DRAWINGS AND PRICES MAY BE HAD OF J. COX, AS ABOVE.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment,—Falcon Wharf, 80, Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

THE EXTENSIVE SHIP-BUILDING ESTABLISHMENT AND IRON WORKS OF MR. C. J. MARE, AT BLACKWALL.

MESSRS. FULLER and HORSEY, in conjunction with Messrs. PULLEN and SON, are instructed by the Assignees with the consent of the Mortgagees, to OFFER for SALE by AUCTION, at the AUCTION MART, London, on the 30th of JULY next unless an acceptable offer be previously made by private contract, in four lots, the extensive SHIP-BUILDING ESTABLISHMENT and IRON WORKS of Mr. C. J. Mare; together with the whole of the valuable fixed PLANT and MACHINERY. These works, which together occupy a site of 14a. 2r. 30p. are situate on the opposite banks of Bow-creek at its junction with the Thames, a portion of the works having a direct frontage next the Thames. The land frontages abut on Trinity-road and Orchard-place, Bow-road, and on the North Woolwich Railway, near the junction to the Victoria Docks, by means of which, and the North London Railway, direct communication with the northern and midland districts is established; the approach from the City is easy and frequent throughout the day, by the Blackwall and North Woolwich Lines, from their joint terminus in Fenchurch-street, by means of which the northern and southern division of the works are reached within half an hour; there is also a ferry across Bow-creek for the facility of communication. The resources of the establishment for the purposes of ship-building, conversion of iron, and general engineering works, are unequalled in the world, upwards of 36,000 tons of shipping having been built and launched in the years 1853 and 1854 from the yards, while from the forge and iron works upwards of 17,000 tons of iron have been hammered and rolled within the same period, and from the foundries upwards of 4,000 tons of castings delivered. The high character of the work executed has gained for the firm a world wide reputation In the Ship-building Department, vessels have been built for the English, Turkish, Russian, Spanish, and Sardinian Governments, the Peninsular and Oriental, the General Screw, and the General Steam Navigation Companies, the Dover Mail Packet Company, the South Western Railway Company, and others, the guilded name of Mare's having attained a world wide celebrity for the excellence of its productions in speed, and strength; a failure in any one case. Among others may be named the *Reynard*, *Mastiff*, *Vesta*, *Ino*, *Swallow*, *Arrow*, *Swift*, *Falcon*, *Lynx*, *Ibis*, *Spitfire*, *Firefly*, *Wasp*, *Hornet*, *Gannet*, *Seamew*, *Curlew*, *Snipe*, *Stag*, *Fawn*, *Roe*, *Antelope*, *Buffalo*, *Elephant*, *Camel*, *Dromedary*, *Leopard*, *Panther*, *Tiger*, *Lion*, *Wolf*, *Fox*, *Hound*, *Terrier*, *Greyhound*, *Bloodhound*, *Harrier*, *Lurcher*, *Mastiff*, *Retriever*, *Pointer*, *Setter*, *Water Witch*, *Water Lily*, *Water Wagtail*, *Water Hen*, *Water Ouzel*, *Water Fly*, *Water Snake*, *Water Spaniel*, *Water Dog*, *Water Rat*, *Water Mouse*, *Water Vole*, *Water Shrew*, *Water Newt*, *Water Frog*, *Water Toad*, *Water Lizard*, *Water Beetle*, *Water Spider*, *Water Flea*, *Water Louse*, *Water Gnat*, *Water Midge*, *Water Moth*, *Water Butterfly*, *Water Caterpillar*, *Water Grub*, *Water Maggot*, *Water Worm*, *Water Leech*, *Water Snail*, *Water Mussel*, *Water Oyster*, *Water Clam*, *Water Cockle*, *Water Periwinkle*, *Water Whelk*, *Water Limpet*, *Water Barnacle*, *Water Crab*, *Water Lobster*, *Water Crayfish*, *Water Shrimp*, *Water Prawn

COMPETITIONS.

PARISH of BRIGHTON.—To ARCHITECTS and OTHERS.—The Brighton Burial Board are desirous of procuring DESIGNS for the ERECTION of TWO CHAPELS, RECEIVING HOUSE, SEXTON'S LODGE, and MEMORIAL GATEWAY, and are inquired with detailed working drawings, specifications, and estimates. The outlay must not exceed 2,250l. The Board will award to the author of the best design in their judgment, subject to the approval of the bishop of the diocese, the sum of 20 guineas; and to the author of the second best design the sum of 10 guineas. Designs for which premiums are awarded will become the property of the Burial Board, who will not bind themselves to employ the author to superintend carrying out the works. The Board will not pay either of the premiums, unless a sufficient Tender be made for the actual execution of the works at or within the stipulated sum of 2,250l. If the Board employ the author of the design to superintend the execution of the buildings, the premium will merge in the commission, which is not to exceed 5 per cent. on the lowest Tender accepted, including travelling and other expenses. A plan and section of the land may be inspected, and general instructions be obtained, at the office of the Burial Board, Parochial Offices, Church-street, Brighton, on application to Mr. MAYNARD, the Surveyor. Designs must be lithographed at the said offices, free of all expenses, on or before the 4th day of AUGUST next, marked with an emblem or motto, and accompanied by a sealed note, having the same emblem or motto on the outside, and enclosing the name and address of the author. The designs not approved will be returned to the authors on application.—By order of the Board,
July 4, 1856. SOMERS CLARKE, Vestry Clerk.

CONTRACTS.

TO BUILDERS.—WHITECHAPEL UNION WORKHOUSE.—The Guardians of the Whitechapel Union will meet at the Workhouse, in the Whitechapel-road, on FRIDAY, the 1st of AUGUST next, at THREE o'clock in the afternoon precisely, to receive TENDERS and CONTRACTS for BUILDING the FIRST PORTION of the NEW WORKHOUSE for this Union, in Charles-street, Mile-end New-town. The plans, specification, and conditions of Contract, may be inspected at the offices of the Architect, THOMAS D. BARRY, Esq. 15, Lincoln's-inn-fields, London, and 47, Bedford-street North, Liverpool, from the 14th to the 19th JULY next. Bui ders proposing to Tender, or their representatives, are invited to meet the Architect, at his office, 15, Lincoln's-inn-fields, London, on FRIDAY, the 4th of JULY next, for general explanation, and to receive particulars. Tenders must be delivered sealed and indorsed, "Tender for Workhouse," at the Whitechapel Workhouse, previous to the time of meeting; and the person whose Tender is accepted will be required to give satisfactory security in the sum of 2,000l. for the due performance of the Contract. The Guardians reserve to themselves the right not to accept the lowest or any Tender. By order of the Board,
G. ADAMS PARR, Clerk to the Guardians.

THE PUBLIC HEALTH ACT, 1848.—To CONTRACTORS and OTHERS.—The Local Board of Health for the district of Leamington, are prepared to receive TENDERS for the CONSTRUCTION of TWO COVERED RESERVOIRS (each capable of containing five millions of gallons of water), on the Newbold-hill, near Leamington, with the LAYING of WATER MAINS, 12 yards in length, of 12 inches and 9 inches internal diameter, and other works connected therewith; the plans for which may be seen, and further particulars thereof obtained, on application to Mr. JOSEPH PHILLIPS SHARP, Surveyor to the Local Board, at his Office, Town-hall, Leamington; and copies of the specification and form of Tender may be obtained on application to the Clerk, at his Office, Townhall, on payment of 1s. on and after MONDAY, the 7th day of JULY, 1856, to whom Tenders must be forwarded, endorsed "Tender for Reservoirs on Newbold-hill," on or before MONDAY, the 21st day of JULY, 1856. The Board do not bind themselves to accept the lowest or any Tender.—By order.
R. H. DAVIES, Clerk.

Town-hall, Leamington, June 17, 1856.

BOROUGH of LEEDS.—WANTED, by the Town Hall Committee of the Council of this Borough, plans, specifications, and estimates for WARMING and VENTILATING the TOWN HALL at present erecting in the said borough. All plans, &c. to be sent to the Town Clerk's Office, not later than THURSDAY, the 24th JULY next, addressed to "The Chairman of the Town Hall Committee," plans, &c. for warming and ventilating." A ground plan of the building may be seen, and any information obtained, at the Office of the Architect at the Works; but the Committee do not bind themselves to adopt the lowest estimate, or any plan which may be sent in.
By order,
JOHN A. IRIN, Town Clerk.

Leeds, June 27, 1856.

WARE LOCAL BOARD of HEALTH.—CONTRACT for PAVING, SUPPLYING MATERIALS, &c.—The Local Board of Health are prepared to receive TENDERS from parties willing to CONTRACT for LAYING DOWN PAVING, CURBING, and other WORKS required in forming Paths, &c. in the Town of Ware, and for Supplying best Aberdeen Granite Curb Stone, and Welch Rockmill Flagging for the same. Plans and specifications may be seen, and particulars and other information obtained, by applying to the Clerk, between the hours of ELEVEN and FOUR. Tenders to be sent to, or delivered at the Office of the Local Board, at Ware, on or before MONDAY, the 21st of JULY next. The Board do not bind themselves to accept the lowest, or any Tender.—By order,
NATH. COBHAM, Clerk to the Board.

Ware, June 24, 1856.

TO BUILDERS.—Persons desirous of CONTRACTING for the ERECTION of SIX HOUSES, in the CITY-ROAD, can see the plans and specifications, and obtain further particulars, at the Offices of the Architects, Messrs. WEIGHELL and ASHDOWN, 12, Charing-cross. The right is reserved to reject the lowest or any Tender.—Tenders to be delivered on the 24th inst. at TWELVE o'clock.

CONTRACTS.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Director-General of Contracts, War Department, Pall-mall, London, on or before FRIDAY, the 18th day of JULY next, from persons desirous of CONTRACTING with the War Department for ERECTING a GUNPOWDER MAGAZINE, at Upnor Castle, near Chatham. Plans and specifications of the works are to be seen, and forms of Tender obtained, on application at the Royal Engineer office, Chatham, between the hours of TEN and FOUR, till the 17th of JULY next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible sureties, jointly and separately to be bound, under a penalty of 5,000l. for the due performance of the Contract. Tenders to be addressed to "The Director-General of Contracts, War Department, Pall-mall, London," and to be delivered free, endorsed, "Tender for Works at Upnor Castle." No Tender can be admitted after the said 18th day of JULY, 1856.

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Chatham, 30th June, 1856.

TO BUILDERS, IRONFOUNDERS, &c. KENT COUNTY PRISONS, MAIDSTONE.—Persons desirous of CONTRACTING with the Justices of the County of Kent for the ERECTION of additional BUILDINGS at the NEW PRISON for FEMALES, may inspect the plans and specifications, and obtain all other information, at the Office of the County Surveyor, at Maidstone; or at the Office of Messrs. ASHPITEL and WHICHCORD, Architects, No. 2, Pietercorner, Westminster; and they are requested to deliver Tenders for the said Works to the County Surveyor, at Maidstone, sealed, and marked "Tender for Prison Buildings," before TEN o'clock in the forenoon of SATURDAY, the 19th day of JULY next, and to attend personally at the General Sessions, to be holden at the Court-house, at Maidstone, at HALF-PAST TWELVE o'clock in the afternoon, on MONDAY, the 21st day of JULY next. The lowest Tender will not necessarily be accepted, unless approved in all respects. Security will be required for the performance of the contract, and the names of the sureties proposed are to be named in the Tender
H. A. WILDES, Clerk of the Peace for Kent.

Maidstone, June 21, 1856.

N.B.—The quantities will be furnished.

CONTRACTS.—WAR DEPARTMENT.—To BUILDERS and CONTRACTORS.—The Commanding Royal Engineer at Aldershot hereby gives Notice, that sealed TENDERS will be received by the Director General of Contracts, War Department, Pall Mall, London, until TEN o'clock, on SATURDAY, the 9th AUGUST 1856, from parties willing to Contract for the ERECTION and COMPLETION of
Two wooden Buildings for chaplain's quarters.
One ditto for commissariat storekeeper's ditto.
Two Sachet-roof Privies.
Foundations for two Iron Stores.
Wooden Fitments to Barrack Store (to form one Tender); and
Two large Iron Stores, exclusive of Foundations (to form a separate Tender).

Plans may be seen, and specifications and forms of Tender obtained, on application at the Royal Engineer's Office, Aldershot, on and after the 18th instant.

The War Department reserves the right of rejecting the whole or any of the Tenders.

TO CONTRACTORS, BUILDERS, and OTHERS.—The Burial Board for the Parish of West Ham, in the county of Essex, require TENDERS from persons willing to CONTRACT for EN LOSING about TWELVE ACRES of LAND, situate near to the Wanstead Industrial School, Forest-lane, in the said Parish of West Ham, with a boundary wall iron railing and extensive iron gates, and for ERECTING TWO CHAPELS and a LODGE. The iron railing and gates to be tendered for separately. The Board do not require personal attendance, and will not bind themselves to accept the lowest or any other Tender, but the party whose Tender shall be approved will receive notice thereof, and will be called upon to execute an agreement, and to give bond with sufficient sureties for the due performance of the Contract, according to the plans and specifications, and to the satisfaction of Mr. T. E. KNIGHLEY, Architect, of No. 25, Cannon-street, City, of whom any further particulars may be obtained, and where may be seen daily, from TEN and FOUR o'clock, the said plans and specifications up to and including THURSDAY, the 24th instant. Every Tender is to be sealed, and marked "Tender for Works to West Ham Burial Ground," and is to be addressed to Mr. JOHN SUTTON, Clerk to the West Ham Burial Board, Robert's Hotel, Stratford, Essex, and to be delivered by TWELVE o'clock on FRIDAY, the 25th instant, after which hour no Tender will be received.
Dated 7th July, 1856.

WEST HAM CEMETERY.—The quantities are taken out for the above work, and may be obtained at the Architect's Offices, 25, Cannon-street, City.

THE BOARD of WORKS for the LEWISHAM DISTRICT.—Notice is hereby given, that at the meeting of the Board to be held on THURSDAY, the 24th JULY next, the Board will be ready to receive TENDERS for the EXECUTION of the SEWERAGE WORKS and parts of those first in length proposed to be constructed in Stanstead-road, and parts adjacent, within the said district. The works are submitted for tender in a second time, in consequence of the Board not having accepted any of the tenders sent in for the first time of asking. Plans, sections, and specifications of the works may be seen at the Board's Office, Lewisham, on and after Monday next, and tenders are to be made in accordance with the printed forms to be obtained at the Office; and to be sent in, or delivered at that Office, by or before FOUR o'clock in the afternoon of the same day. Parties do not need themselves to attend to tender personally.
OCTAVIUS C. TILSON EGGLETON, Clerk to the Board.
Grove-place, Lewisham, July 8th, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

LONDON and NORTH-WESTERN RAILWAY.—Crewe and Shrewsbury Railway.—CONTRACT for WORKS. The Directors are prepared to receive TENDERS for the CONSTRUCTION of the RAILWAY from Crewe to Wem, a distance of twenty-two miles, or thereabouts. The plans and sections, together with the necessary drawings, specifications, and forms of Tender will be ready for inspection at the Office of Messrs. LOCKE and FRINGTON, 15, Duke-street, Westminster, on and before the 25th JULY. Sealed Tenders must be delivered not later than THURSDAY, AUGUST 7th, addressed to the Secretary, at Euston Station, London.

By order of the Board,
CHARLES E STEWART, Secretary.
Euston Station, London, July 10, 1856.

STEVENS, Architect, Church-road, Tunbridge-wells; or of the Surveyor, Mr. GEORGE MORGAN, 46, Norfolk-street, Strand, London, on and after WEDNESDAY, 9th JULY, 1856, between the hours of EIGHT and TWO. Tenders are to be delivered on or before TWELVE o'clock on FRIDAY, JULY 25th, to the Surveyor, at his Offices as indorsed "Tenders for Roads &c. Tunbridge-wells Estate." The Executive Committee do not bind themselves to accept the lowest or any tender.

CHARLES LEWIS GRUNEISEN.
[illegible] Stone Buildings, Lincoln's Inn, London.

THE CONSERVATIVE LAND SOCIETY.
TRUSTEES.
Viscount Raincliffe.
Right Hon. R. A. C. N. Hamilton, M.P.
Hon. Col. Lowther, M.P.
J. C. Cobbold, esq. M.P.

To ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS, DRAINAGE, and FENCING on the MALDON ESTATE, Essex. The drawings and specification may be seen at the offices of Mr. HENRY CUDD, Solicitor, Maldon; or of the Surveyor, Mr. GEORGE MORGAN, 46, Norfolk-street, Strand, London, on and after THURSDAY, 10th JUNE, 1856, between the hours of EIGHT and TWO. Tenders are to be delivered on or before TWELVE o'clock on FRIDAY, JULY 18th, to the Surveyor, at his Offices, and endorsed "Tenders for Roads, &c. Maldon Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN,
33, Norfolk-street, Strand, London.

TO BUILDERS.—A VESTRY HALL is required to be ERECTED for the Parish of Willesden. Persons willing to Tender for the same may see the Plans and Specification at the Offices of the Surveyor, Mr. [illegible] Tenders to be delivered at the Vestry Room, at the Office, on FRIDAY, the 18th, at TWELVE.

TO CARMEN, EXCAVATORS, &c.—TENDERS are required for CLEARING a PIECE of GROUND in Hammersmith, for which purpose Plans may be seen at Mr. [illegible] Office, No. 14, Parliament-street, Westminster, on MONDAY.

TO BUILDERS.—Parties desirous of TENDERING for the ERECTION of NINE [illegible] Cottages, to be built at Waltham, near Bishop's Waltham, Hants, may see the Drawings and Specification at the Office of Mr. BASSELL, Surveyor, Bishop's Waltham, on and after MONDAY, the 14th day of JULY, and Tenders must be delivered at the Office of Messrs. [illegible] 21, Exeter Hall, Strand, to whom the Tenders must be sent on SATURDAY, the 19th of JULY, at TWELVE o'clock. The lowest Tender will not necessarily be accepted.

NOTICE to BUILDERS and CONTRACTORS.—Any person desirous of CONTRACTING for the BUILDING of the [illegible] Cottages, Workmen's Dwellings, Outbuildings, and Boundary Walls, at WOOLWICH, may see the Plans and Specification at the Office of Mr. [illegible] Woolwich, on and after MONDAY, JULY 14th, and on TUESDAY, the 15th of JULY inclusive, between the hours of TEN and FIVE. The lowest or any Tender will not be bound to accept.

CONTRACTS.

NEWCASTLE-UPON-TYNE. — QUAYSIDE IMPROVEMENTS. To MILLERS, CAPITALISTS, &c. — The Corporation of Newcastle-upon-Tyne having purchased, by virtue of an Act of Parliament, the whole of the property on the Quayside, commanding the finest and most valuable portion of the surrounding property, for the purpose of improving that part of the town, and having laid out the same into several new streets, which, when built, will form the best business streets in the town, are now prepared to receive TENDERS for the purchase of the whole or any of the SITES on each side of the intended street, No. 1, and also a great portion of the parallel street, according to plans and conditions now settled by the Council. The great demand for offices, shops, for wholesale and retail purposes, and warehouses, in those particular parts of the town, ensure to capitalists a safe and valuable investment. Plans and conditions may be seen on application to the Town Clerk, the Town Surveyor or JOHN DOBSON, Esq. Architect. Notice of intention to Tender, marked "Tenders for Sites, Quayside," addressed to the Town Clerk, will be received not later than [illegible].

N.B.—A large quantity of old building materials on the ground will be sold to any purchaser of premises who require the same.

THE LUTON LOCAL BOARD of HEALTH are prepared to receive TENDERS for BUILDING an INTERCEPTING SEWER, 3 Lodged DRAINS, connected therewith, and for ERECTING the TANKS, ENGINE HOUSE and other WORKS required for deodorizing and precipitating the sewage of the township, according to the directions of a deposition, which may be seen at the Engineer's Office, at or MONDAY, the 30th inst. and printed copies of the specification, conditions, bill of quantities, and form of Tender may be had on payment of 10s. 6d by applying to Mr. T. L. EVANS, C.E. as above. Tenders, sealed, addressed to the Clerk to the Local Board of Health for Luton, Beds, and delivered at the Office, Luton, St. Cole on or before TUESDAY, the 15th day of JULY.

Dated June 18th, 1856. GEORGE BAILEY, Clerk

TO BUILDERS, CARPENTERS, and OTHERS.—COUNTY POLICE STATIONS.—The Magistrates for the several Parishes and Places hereinafter mentioned are prepared to receive TENDERS for the ERECTION of POLICE-STATIONS at the several places following, viz.:—

Abingdon,	Newbury,
East Ilsley,	Wallingford,
Farringdon,	Wantage.

Persons desirous of Contracting for the works may see the plans, specifications, and particulars, and obtain bills of quantities, at the County Police Station, Friar-street; at my Office, Broad-street, Reading; and as hereinafter specified, viz.:—

Abingdon ..... At the COUNTY GAOL.
Eastilsey..... At the Office of Mr. HULBERT.
Farringdon ..... At the Office of Mr. CROWDY.
Newbury ..... At the Offices of Messrs. GRAY and GODWIN.
Wallingford ..... At the Office of Messrs. REDDES.
Wantage ..... At the Office of Mr. ORMOND.

Sealed Tenders must be delivered at the Office of the Clerk of the Peace, Reading, on or before SATURDAY, JULY 19th instant, between the hours of TEN and FOUR. Separate Tenders for each Station, sealed and properly endorsed, to be set up under each, addressed to the Chief Constable, Berks Constabulary, Reading, on or before SATURDAY, JULY 26th instant. The lowest Tender will not necessarily be accepted.—By order of the Magistrates.

J. B. CLACY, Architect, County Surveyor.

Reading, July 4, 1856.

GUILDFORD UNION.—To BUILDERS and CONTRACTORS.—EXTENSIVE ADDITIONS and ALTERATIONS to the GUILDFORD UNION WORKHOUSE. The Guardians of the Guildford Union, in the County of Surrey, hereby give notice, that they are desirous of receiving TENDERS for BUILDING NEW SCHOOLS and DORMITORIES, a NEW HOSPITAL, and other additions and alterations to the Workhouse, at Guildford Union, according to the plans and specifications prepared by Mr. C. H. HOWELL, Architect of Godalming, Surrey, and of the Norwich Union Insurance Office, New Bridge-street, London. The plans and specifications may be seen at the Architect's Office, in London (entrance, 1A, Union-street, New Bridge-street), after FRIDAY, the 11th JULY instant. A copy of the bill of quantities may be obtained from Mr. CHARLES POLAND, Surveyor, 72, Margaret-street, Cavendish-square, upon the payment of 11s. The Contractor whose Tender may be accepted will be required to give security for the due performance of the Contract. The Guardians do not pledge themselves to accept the lowest or any of the Tenders.—Tenders, indorsed "Building Tenders," to be delivered to me by NOON o'clock in the evening of FRIDAY, the 25th JULY instant.

By order of the Board,
W. HAYDON SMALLPEICE, Clerk.

Guildford, July 1, 1856.

HASTINGS LOCAL BOARD of HEALTH.—To CONTRACTORS for PUBLIC WORKS.—The Local Board of Health of Hastings give notice, that they are prepared to receive TENDERS from competent persons for the DRAINAGE of part of their district. The Contract will comprise the CONSTRUCTING and LAYING of about fifty yards of 4 feet CAST-IRON CULVERTS; 100 yards of 15-inch CAST-IRON PIPES; all provided by the Local Board; about 2 147 yards of BRICK SEWERS, from 1 foot 6 inches to 4 feet; and about 1,47[illegible] yards of GLAZED STONEWARE PIPES of sizes from 9 inches to 15 inches. Also the necessary Gullies, Ventilating Shafts, Side Entrances, and Tide Flaps. The specification and conditions of Contract and Tender, with printed form of Tender, may be obtained, upon payment of five shillings, and the plans, sections, and drawings, may be inspected at the Office of the Town Clerk, High-street, Hastings, between the hours of TEN and FOUR, on and after the 12th instant. The Local Board will require the works to be completed within six months from their commencement; and they do not bind themselves to accept the lowest Tender. Sureties will be required. Sealed Tenders on the forms supplied by the Local Board, properly indorsed and addressed to "The Hastings Local Board of Health," must be delivered at the Town Clerk's Office, Hastings, before TWELVE of the clock at noon of FRIDAY, the 25th day of JULY next. Full particulars of quantities will be furnished at the cash By order of the Local Board,

JOHN G. SHORTER, Town Clerk.

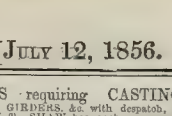
Hastings, June 9, 1856.

NORWICH NEW WORKHOUSE.—NOTICE to ARCHITECTS.—The TIME for sending in Plans &c. is EXTENDED to the 29th instant.

By order of the Guardians,
E. C. BAILEY, Clerk.

9th July, 1856.

MIDDLESEX INDUSTRIAL SCHOOL. The Committee of Visitors have selected the Designs for the proposed Industrial School, by Messrs. AICKIN and CAPES, Mr. GEORGE HENDERSON, and Mr. W. B. MOFFATT, and have awarded the premiums accordingly. In making this award they sought for the combined principles in preparing and forwarding designs, most of which appeared to be works of great care and labour, the committee notify to them that their services will be returned on application, on any day between the hours of TEN and FIVE o'clock.—Scala-House, Clerkenwell, July 10, 1856.



CHARLES WRIGHT, Clerk to the Visitors.

First-class Prize Medal, Paris Exhibition, 1855.
Specimens at the Hardware Court, Crystal Palace, Sydenham.
Illustrated Price-catalogues post free on application.

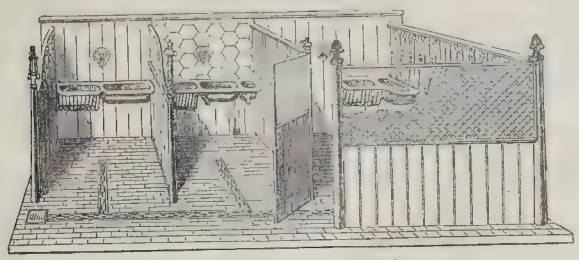
TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No 16	1¼	7s. 0d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.



THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11 inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent that a direct end grain of the iron is presented longitudinally, and which become when built into the brickwork, embedded in the structure, by which means a COMPLETE and PERFECT DEAD TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the tail of which is taken to the back of the manger, and works with ease and freedom up or down the guide bar, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Cottam's new Patent Seed-Box, of galvanized sheet iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates given upon application to

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

WOOD-CUTTING MACHINERY,

JOHN M'DOWALL and SONS, WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow, MANUFACTURERS of VERTICAL SAW-FRAMES (driven by straps),

For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.

Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached, circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from a ½ of an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power mortising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all dependages; sole-board machines, for hat-boxes, &c.; patent slide feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed from the best materials, and first-class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 30 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

LIGHTNING CONDUCTORS.—

R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO'S Patent Copper Rope Conductor is being applied by architects, engineers, and scientific men in all parts of the world.

SAVING IN GAS.—D. HULETT, INVENTOR and PATENTEE.—The Mercurial Gas Regulator is the only efficient instrument for ensuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.—D. HULETT and CO. 35, High Holborn, London, Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

TO SHIPOWNERS, MERCHANTS, and OTHERS.—SHIRLEY'S MARINE GAS APPARATUS, constructed to supply vessels with gas. The inventor, in bringing this before the notice of shipowners and the different steam navigation companies, wishes to explain its practicability, its utility, and economy, in lighting and ventilating large vessels. The inventor's plan for heating the retorts to generate gas will prove of great safety and utility, as the furnace will be encased in an iron compartment, which will form a boiler or hot water tank, for the supply of the vessel, instead of taking the same from the steam-boilers. The gas-holder or gasometer, for using on an oscillating principle, will at all times, and even in the roughest weather at sea, ensure a steady and powerful light, far superior in safety and economy to anything now in use. The cost of gas will be comparatively nothing when taking into consideration the coke and tar, which can be made available for other purposes. The space required for the whole apparatus to supply 100 lights would not require more than about 15 square feet. The gas could also be made useful for signal lights, cooking, and heating the cabins. The inventor of the above, having had thirty years' experience and manufactured gas-works on a small scale, for the supply of from twenty to 100 lights, can give every satisfactory proof of its economy, safety, and utility.
JOHN SHIRLEY, Gas Engineer,
3, Back-road, St George's East.

STEAM BOILER for SALE.—A New Cornish Boiler, 18 feet long, 4 feet diameter.—Apply at the Saw Mills, Church-street, Mile-End New-town, near Whitechapel-road.

BUILDERS! ARCHITECTS! and MASONS! - MARBLE.—The Italian Marble Company call the particular attention of Builders, Architects, Sculptors, and Masons to their PRESENT low prices, viz:—
Veins, in blocks of ordinary dimensions, 8s. 6d per foot cube.
Sicilian " 6s. 6d. "
An inspection of their well-assorted stock is solicited, at "The Depôt," Bridge-wharf, Millbank, adjoining Vauxhall-bridge.—Apply to Mr. BAXTER, Wharf Foreman.
WILLIAM W. BONNIN, Secretary.

Lloyd's Marble Wharf, Thames-bank, Pimlico, Adjoining Vauxhall-bridge.

ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the lower beds of their quarries. Chimney-pieces, Columns, Pedestals, and ornamental works on view, at 26, Surrey-street, Strand.
HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY-PIECES lately imported from the Continent. They comprise Statuary, Giallo di Sienna, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Bardiglio, and other choice foreign marbles; and are designed with great taste, and executed by first-class artists.—On sale, in the show rooms of Messrs. EVANS, SON, and CO. King William-street, London-bridge.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble: bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.: also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 54, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall

BRAMLEY FALL! BRAMLEY FALL! On account of greater facilities than possessed by any one else, TRICKETT and PERKINS are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having completed the extensive quarries in the Hawksworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of the same quality as the well known Old Bramley Fall and Horsforth Quarries, but has the advantage of being of a lighter and more uniform colour. The North-Eastern Railway Company have put sidings in on both sides of the railway. Powerful cranes are fixed, so that the stone can be sent to any part, and the stone being landed in the quarries on the railway-trucks, can be forwarded the same day to any part of the kingdom, or supplied in London river on Selby or Hull, in any quantity. For further particulars apply to JOHN TRICKETT, Stone Merchant, Headingley, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering bases, plinths, templates, c ils, corbels, imposts, cornices, copings, steps, staircases of all kinds, moulded or plain, square or spandril, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed or screwed, and delivered direct in one bottom by vessel or railway truck.—Prices and every information given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone-wharf, Isle of Dogs, or to JOHN TRICKETT, Headingley, Leeds, Yorkshire.

ANCASTER STONE. JOHN WILSON begs to inform Architects, Builders, &c. that having introduced additional and powerful MACHINERY into the ancient Ancaster quarries, he can contract to supply large quantities of STONE, daily. The durability of the ancient Ancaster stone (which has been extensively used in the erection of churches, mansions, factories, &c. and has for centuries withstood all atmospheric influence), also the great saving of labour in working, are too well known to need much comment.—Address, Mr. JOHN WILSON, Station-road, Grantham.

STONE! STONE! STONE!—To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Self-face Slab, Granite Pitching and Curb, Guernsey Joint Rock Materials, and every other description of stone, at JOHN KNIGHT and SON'S, Devon Wharf, Mile-end. York tooled paving, 38s. 6d. per 100 feet; slab for hearths, 4d. per foot; 2-inch slab for chimney-pieces, 3½d. per foot sup.; 3 by 3 window-sills, 6d. per foot run; 15 by 3 copings, 8d. per foot run; box chimneys (any opening), 8s. 6d. each. Terms cash on delivery.

TO CONTRACTORS AND OTHERS.
YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS; Hare-hill, Robin Hood, Park Spring, and Guernsey, in Blocks, Headstones, or Slabs; Purbeck Paving, Sinks, Curbs, Rockstones, Pitchers, and Squares; Caithness Flags, Firestone, Newcastle and Bilston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Caen Stone, Bramley Fall, Bath, Huddlestone, Park-wood, and other Block Stones. Valentia Slate Slabs, Tuscor Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble, in Block and Slabs, supplied from the Wharfs, Millbank-street, City Basin, and Deptford: also direct from the quarries by vessel to any extent, all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, IDLE, near LEEDS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS,
CAEN WHARF, ROTHERHITHE, LONDON.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS.—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated tables for dining-tables, chiffoniers, consoles, &c.; baths lavatories, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules and dairies. Price lists can be had on application to Mr. MAGNUS, 20 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

SLATE CISTERNS, SINKS, and every description of Slate Slab Work, best Bangor Roofing Slates or Covering.—T. B. HANNAFORD'S Price List, which can be had on application, will be found lower than any other. Roofs covered with best Bangor Countesses within a four-mile circle, 21s. per square.—Trevalga Wharf, Ratcliffe-cross.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, blue and green, of the usual sizes, which they are prepared to supply on the usual terms, for shipment from their depôt at Bangor, or to transmit by railway. Also Slabs of all sizes.—Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 2s. 6d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1834 TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by Steam power, laid down in the best manner, on contract, in any quantity. Information for using forwarded with material. Post-office orders or reference in London promptly attended to.—Estimates given for every kind of the above work.

ASPHALTE.—THOMAS HARRISON, having completed his works for making by steam-power, is now in a position to execute orders for BLOCK ASPHALTE to any extent, at an hour's notice. Asphalte expressly prepared for barn and granary floors, and every description of agricultural building. Full directions for laying with instructions will be forwarded. Estimates given for every variety of Asphalte Pavement, Manure and other Tanks, Sea-Walls, Railway work, &c.—The trade supplied with advantageous terms.—THOMAS HARRISON, Asphalte and Whiting Works, Cambridge-heath Wharf, Hackney; and Sunderland Wharf, Rotherhithe.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slate and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.
N.B. This wharf is very near the St. Margaret's Estate.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS
W. and J. STUDER, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 31 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

NOTICE of REMOVAL.—EDWARD SIMMS begs to inform his customers and friends that he has REMOVED his business from Wilton-road, Pimlico, to the KING'S-ROAD, CHELSEA, where their orders will be promptly executed as heretofore.—Please address, E. SIMMS, King's-road, Saw-mills, Chelsea, opposite Manor-street.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory the first of its kind ever established, a large assortment of PLANED FLOORING and MATCH BOARDING, seasoned and ready for use, from ½-inch to 1½-inch thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Pannel Rafters, Laths, Oak Sills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

MOULDINGS BY MACHINERY. Capping, Sash-bars, Beads, &c. to any Design, carefully packed and sent to all parts of the kountr.. A Pattern List sent on application to
E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
KING'S-ROAD, CHELSEA.

GEORGE SMITH, TIMBER-MERCHANT, LONDON.—Address to No. 18, Binfield-road, Clapham-road, Stockwell; or Jamaica Coffee-house, City. Goods delivered from the Docks. PREPARED FLOORING, &c. from the Saw-mills. Goods in Bond for Exportation.
N.B. A large Stock of Dry Prepared Flooring, &c. from Two to Four Years Old.

AT the LOWEST PRICES.—SAMUEL PUTNEY invites the attention of buyers to his large and well-selected Stock of the various descriptions of Deals, commencing at the following low prices:

Yellow Deals, from	£20	0 per 120
Spruce ditto, from	18	0 ,,
Yellow Battens	13	0 ,,
Dry Pine Plank, from	21	0 ,,

Prepared Flooring, &c. at equally low prices. A list forwarded on receipt of a postage stamp.—N.B. All sawn goods delivered within two miles free of cartage.—Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

MACHINE CARVING WORKS (Patent). Ecclesiastical and every other description of CARVING. A magnificent Gothic Screen, Carved Glass Frame, and other specimens. Tables, Chairs, Lecterns, &c. Designs and estimates at the Works, Belvedere-road, Lambeth, foot of Hungerford-bridge.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shopfitters to his carefully selected MAHOGANY, suitable for Counter Tops, and to his seasoned Materials for builders, cabinet and blind makers, &c. Delivered, cartage free, to any of the London railway stations, or within three miles from Kennington Church.

MAHOGANY and WAINSCOT seasoned by Symington's New Patent Process—JOHN COUMBE solicits an inspection of his stock. The above process enabling him to season his wood in a comparatively short space of time, he sells at prices generally charged for wet wood.—Address, PATENT WOOD SEASONING WORKS, Lady Lake's-grove, Mile-end-gate.

FLOOR BOARDS, &c.—R. SLADE begs to inform Builders and the Trade, that he has now on hand a large assortment of FLOORING and MATCHED BOARDING, from 4 inch to 1½ inches thick, seasoned, and ready for use; also, Mahogany, Moulding, Wainscot, and all kinds of Timber required for Building purposes.—Address, R. SLADE (late E. Simms), Flooring Manufactory, Wilton-road, Pimlico.

Francis Le Breton, esq. 3, Crosby-square. MANAGER.—Will. Thos. Thomson, F.R.S.E. RESIDENT SECRETARY.—H. Jones Williams. INSPECTOR OF AGENCIES.—William Bentham. EDINBURGH.—1, George-street. LONDON,—83, King William-street.

THE NEW BUSINESS transacted by this Company during 1855 exceeded that of any Assurance Institution in the United Kingdom, the Sums proposed for Assurance during the year being £716,383 7 11
And the Assurances accepted 660,333 7 11
A BONUS was declared on 1st May, 1855, varying from 27l. 18s. to 18s. per cent. on the sums assured. This was the Fifth Declaration of Profits.

EXAMPLES OF BONUS.

Date of Policy.	Sum in Policy	Total Bonus Addition to 1855	Sum in Policy with Bonus Addition.
15th Nov. 1825	£1,000	£1,152 0 0	£2,152 0 0
,, 1830	1,000	837 0 0	1,837 0 0
,, 1835	1,000	582 0 0	1,582 0 0
,, 1840	1,000	347 0 0	1,347 0 0
,, 1845	1,000	174 10 0	1,174 10 0
,, 1850	1,000	64 0 0	1,064 0 0

The Income of the Company is about a Quarter of a Million.
NON-FORFEITURE OF POLICIES.
Important resolutions have been adopted as to Non-Forfeiture of Policies within thirteen months from the date of payment of the premium under certain conditions.
SELECT ASSURANCE COVERING FOREIGN RESIDENCE WITHOUT EXTRA PREMIUM.
Policies of five years' duration are admissible to this class at the discretion of the Directors.
SURRENDER VALUES.
A Liberal Surrender Value is allowed after payment of One Annual Premium for Policies on the With Profit Scale, and after Three Premiums on the Without Profit Scale.
Persons proposing to effect Assurance are invited to examine these important and peculiar conditions by application to the Company's Office, where the fullest information may be obtained.
H. JONES WILLIAMS, Res. Sec.
London, 83, King William-street.
Copies of the Report of the Proceedings at the Meeting of 1st of May, 1856, are now ready, and can be had at the Office.

TEMPERANCE PERMANENT LAND and BUILDING SOCIETY. Offices, 31, Moorgate-street, London. Shares 30l. Subscriptions 4s. per month. Entrance fee, 1s. per share.
All persons, whether abstainers from intoxicating drinks or not, may become members or depositors.
STRATFORD ESTATE.
Applications for allotments on the second portion Lots 198 to 227 of this admirable property, will be received on or before the 11th day of AUGUST, 1856. All persons joining the Society previously will be eligible to participate. This estate is distant three and three-quarter miles from the City, about five minutes' walk from Stratford Church and Forest-gate and Stratford Stations. More than twenty trains from Shoreditch, and nearly forty trains from Stratford, each day. Return tickets to Stratford, 4d. Trains leave Fenchurch-street and Shoreditch for Stratford-bridge, every half-hour, and vice versa. Several trains daily to and from all stations on the North London Railway.
The prices of the lots vary from 12l. to 36l., conveyance included. The lots may be paid for in one sum, or by instalments of 6s. per plot per month.
8,900l already advanced
BUILDING DEPARTMENT.
The premium for the advance is added to the principal, and not required to be paid down.
The interest payable is 5l. per cent. and only upon the amount remaining unpaid each year.
Forms of Tender, prospectuses, and further information at the Office, or by letter addressed to
HENRY J. PHILLIPS, Secretary.

IMPORTANT to ENGINEERS, MILLOWNERS, &c.—NORTH WOOLWICH ELASTIC STEAM-PACKING (Canvas and India Rubber) at 1s. 4½d. per pound; Rings 3d. per lb. extra), as supplied to her Majesty's dockyards. CAUTION.—None genuine unless stamped thus:—
S. W. SILVER and CO.—Works, North Woolwich.
TESTIMONIALS.
"Commercial Mills, Combrook, Manchester, Oct. 6, 1854.
"GENTLEMEN,—We have been using almost exclusively, for the last three years, your Packing to our stuffing boxes and steam and water joints, prev ous to which time we tried all the sorts which came under our notice, but yours we consider decidedly the best and most economical.—We are, yours respectfully,
"JESSEL, SCHOFIELD and SONS."
"King and Queen Iron Works, Rotherhithe
"London, Nov. 11, 1854.
"GENTLEMEN,—We have tried your Patent Packing for some time in our steam-engines, and also in steam-pipe joints, and find it efficient and economical, and to be much superior to the ordinary hemp packing. It is especially serviceable in the slide valves.—Yours truly, "HOWARD RAVENHILL and CO."
"Works, Deptford, Jan 29, 1856.
"I have pleasure in stating that the Packing of Messrs. S. W. Silver and Co. has been in use in the various parts of the engines on board the steam-ships of the company, and given every satisfaction. "J. BEARDMORE, Engineer.
"General Steam Navigation Company."
Copies of further testimonials forwarded, on application to S. W. SILVER and CO. Nos. 3 and 4, Bishopsgate-street Within, opposite the London Tavern.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS. CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gas-holders, and pumps, alkali cisterns, &c. &c. Articles moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., YENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO., Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.							
¼	⅜	½	¾	1	1½	2	3 in.
9d.	11d.	1s.	1s. 3d.	1s. 5d.	1s. 7d.	1s. 9d.	2s. 2d.	2s. 8d.	2s. 9d.

Super-extra stout quality.

2	2½	2¾	3	3½	3 inches.	
2s.	2s. 3d.	2s. 6d.	2s. 9d.	3s. per yard.		

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1½	1¾	2	2½	2½ inches.
6d.	10d.	11d.	1s.	1s. 3d.	1s. 6d. per yard.

The hose is Burnettized at an extra charge of 2d. per yard
Union Joints, Branch Pipes, and Jets, are also supplied.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.
Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

LEVELLING, Surveying, Drawing, Mapping, Estimating, for Railway or other Works; Enlarging, Reducing, Copying, Tracing, &c. undertaken by Mr. C. B. RICHARDS (late an Officer of the Metropolitan Commissioners of Sewers). Surveyors to the District Boards of Works, or Local Boards of Health, will find him a useful auxiliary, from his experience in all the details of Sewage Works.—4, Trafalgar-square.

TO ENGINEERS, SURVEYORS, ARCHITECTS, &c.—A REGISTRY kept of Surveyors, Levellers, Architects and Builders' Assistants, Clerks of Works, and Draughtsmen, requiring EMPLOYMENT. Efficiency ascertained before recommended.—Apply to Mr. C. B. RICHARDS, Engineer and Surveyor, 4, Trafalgar-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES, Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading and Tinting; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Measuring, and Valuing Builders' Work, &c. &c. Terms:—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the course, with the use of Drawing Boards. The Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

LITHOGRAPHY.—Every description of Maps, Plans of Estates, Engineering, and Architectural Drawings, Bill Heads, Circulars, &c. executed with despatch, at C. MOODY'S Drawing and Printing Offices 257, High Holborn. N.B.—Artists supplied with every requisite for Oil and Water-colour Drawings, &c.

MATHEMATICAL DRAWING INSTRUMENTS. JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.
N.B. A few new and Second-hand Levels and Theodolites always for Sale.

MESSRS. DESACHY and CO. of Paris, 49, Great Marlborough-street, invite the attention of Architects, Artists, Builders, and Patrons of the Fine Arts, to their COLLECTION of CASTS of STATUES from the various Museums of Europe. Reductions from the Antique by Collas, in plaster and bronze; architectural ornaments and decorations in every style. Messrs. DESACHY are also prepared to furnish designs, give estimates, and to enter into contracts for executing works of decoration in plaster, cement, carton pierre, and other materials.

PLANS, DRAWINGS, MODELS, MANUSCRIPTS, &c. COPIED by PHOTOGRAPHY, on Paper, to any scale, at REEVES'S Photographic Establishment, 18, King William street, Charing-cross (late of 238, New Bond-street). Terms, from 5s. duplicates 12s. per dozen. Portraits taken by all three processes, in a superior manner and very moderate terms.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, String Bricks, Copings, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent impermeable Terra-Cotta, at Bull-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin.

CARTS, VANS, WAGGONS, LADDERS, BARROWS, &c.—Price Lists for the undermentioned may be had on application:—
No. 1. Carts, Vans, Waggons, Drays, and Trucks.
No. 2. Wheels and Repairs.
No. 3. Ladders, Barrows, &c.
No. 4. Hire of ditto.
G. ELL, 9, Tottenham-court, and 3, Palace-row, New-road, St. Pancras, near the Hampstead-road.

TO BUILDERS AND PAINTERS! THE present PRICES of COLOURS at C. CRANE'S White Lead and Colour Warehouse, No. 1, Pickering-place, Lower-road, Islington, are as under:—Gen. Gro. White Lead, 23s. per cwt.; second ditto 20s.; Linseed Oil, 2s. 10d. per gallon; Boiled Oil, 2s. 9d.; Turps, 2s. 8d.; Patent Driers, 3s. 4d. per cwt.; Oak Varnish, 10s per gallon; Copal ditto, 14s.; Paper ditto, 10s. Ground and dry colours equally low

From the German of PROFESSOR MOLLESCHOTT, of Zurich. With a Chapter on its Adulteration, by DR. SCOFFERN. Being the current number of ORR'S CIRCLE of the SCIENCES.

London: HOULSTON and STONEMAN, 65 Paternoster-row; and W. S. ORR and CO. Amen-corner.

In one thick volume, 8vo. price 8s. 6d. cloth, with nearly One Thousand Illustrations,

THE NATURAL HISTORY of the ANIMAL KINGDOM. Being a Systematic and Popular Description of the Habits, Structure, and Classification of Animals, from the lowest to the highest forms of organization.

By W. S. DALLAS, F.L.S.

Also nearly ready, uniform with the above, price 8s. 6d. cloth,

A NATURAL HISTORY of the INANIMATE CREATION: being a Guide to the Scenery of the Heavens, Atmosphere, Phenomena, the Structure and Geological Features of the Earth, and its Botanical Productions. By D. T. ANSTED, M.A. F.G.S.; EDWARD SMITH, M.B. LL.B. and R.A.; HUGH BRIEN, Esq. Royal Observatory, Greenwich; J. SCOFFERN, M.B.; and J. E. LOWE, F.R.A.S. and F.G.S.

London: HOULSTON and STONEMAN, 65, Paternoster-row, and W. S. ORR and CO. Amen-corner.

This day is published, price 8s. 6d. cloth lettered.

PRACTICAL ASTRONOMY, NAVIGATION, NAUTICAL ASTRONOMY, and METEOROLOGY. Being a Guide to the Scenery of the Heavens, the Planetary and Stellar Movements, the Theory and Practice of Navigation, and Phenomena of the Atmosphere. By Professor YOUNG, HUGH BRIEN, Esq. JOHN SCOFFERN, M.B. and J. E. LOWE, Esq. F.R.A.S. F.G.S. Being Vol. VII. of Orr's CIRCLE OF THE SCIENCES.

London: HOULSTON and STONEMAN, 65, Paternoster-row, and W. S. ORR and CO. Amen-corner.

NEW TREATISES in ORR'S CIRCLE of the SCIENCES Just ready.

1. PRACTICAL ASTRONOMY. By HUGH BRIEN, Esq. Royal Observatory, Greenwich Price 3s. 6d
2. METEOROLOGY and the PRACTICAL USE of INSTRUMENTS. By Dr. SCOFFERN and J. E. LOWE, Esq. Price 3s 6d.
3. The CHEMISTRY of FOOD and DIET. By PROFESSOR MOLLESCHOTT, of Zurich. With a Chapter on Adulterations of Food. By DR. SCOFFERN. Price 1s. 6d.

London: HOULSTON and STONEMAN, 65, Paternoster-row; and W. S. ORR and CO. Amen corner.

Just published,

ILLUSTRATIONS of the FIVE ORDERS of ARCHITECTURE.

By N. E. GREEN

Six Plates, size 21 inches by 15 inches price 2s. 6d. each.

Adapted for the Use of Schools and Architectural Students. The Plates are so arranged as to give at one view the proportions and measurement of the order, together with a building entire and in separate parts.

GEORGE ROWNEY and CO. Manufacturing Artists' Colourmen. Retail, 51, Rathbone-place; Wholesale, 10, Percy-street, London

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for JULY, 1856, is now ready. Price 1s.

London: HENRY GEO. WARREN, 2, Red lion-court, Fleet-street; and GEORGE ROUTLEDGE and CO. Farringdon-street

1 Vol. Handsomely Bound. 31s.

BUILDINGS and MONUMENTS, Modern and Mediæval; being Illustrations of the Edifices of the Nineteenth Century, and of some of the Architectural Works of the Middle Ages.

By GEORGE GODWIN, F.R.S.

Fellow of the Royal Institute of Architects, &c. Editor of "The Builder," and Corresponding Member of several Societies.

With numerous Engravings.

Published at the Office of "The Builder," 1, York-street, Covent-garden.

The Builder.

VOL. XIV.—No. 701.

PROTESTS on the part of the profession are being made against the proceedings of the Government in the case of Sir Charles Barry and the Houses of Parliament. The Royal Institute of British Architects, after deliberations which have extended over some time, have come to the following resolution:—

"That 5 per cent. upon outlay has been, and is, the only rate of charge recognized by the profession, as fairly remunerative in the average practice of architects.—That it is to be deeply regretted that it should be proposed to depart from the above rate in the instance of the New Palace at Westminster; a building involving in its design and execution the exercise of the highest professional attainments.—That the example which would be set by her Majesty's Government, should the course proposed be carried into execution (a legal appeal against their decision being practically impossible), is to be regarded as disastrous to the future prospects of architecture as a liberal profession in this country,—as calculated to lower the character of public monuments in England, and unworthy the Government of a great nation, whose obvious duty it is adequately to foster and protect the genius of its artists."

Notwithstanding this protest and expression of opinion on the part of the body, we fear we shall soon hear that Sir Charles Barry has been obliged to succumb to the Treasury. "My lords," otherwise Mr. Wilson, will not have an arbitration, knowing that they are inaccessible by law: and to force a decision will pay nothing further. Touching the bargain originally made with Sir Charles, on which the Lords of the Treasury rest, namely, that he would accept 25,000*l.* as payment in full, when the amount to be expended was 707,000*l.* (for the shell) and the works were to be executed in six years, it is not generally known that Sir Charles had received his appointment as architect, with the full belief that the remuneration would be of the customary amount, nineteen months before he had the first official intimation that such was not proposed to be the case. He had then made extensive and costly arrangements to enable him to carry on the works, and had no alternative. When, however, he assented to their decision, he said, —"In so doing, I cannot, in justice to myself and the profession to which I belong, refrain from expressing most decidedly my opinion, that the amount is very inadequate to the great labour and responsibility that will devolve upon me in the superintendence, direction, and completion of the intended edifice; and I trust when this is made manifest, as I feel sure it will upon the completion of any considerable portion of it, that there will not be any indisposition on the part of the Board (especially if the work should prove to be satisfactory to the public at large) to award to me the remainder of the remuneration which has hitherto been customary on similar occasions."

To force his ultimate compliance, for two years the architect has not been able to obtain from the Treasury *one farthing*, though by their own showing, even, 20,000*l.* are due.

The affair affords a fresh instance of might *versus* right, and is a curious illustration of freedom under a constitutional Government. We shall be very glad if the resolution passed by the Institute should aid in obtaining justice for Sir Charles Barry.

We understand that the council of the Institute have recently made another intercession with the Government, in which all are interested. Having been informed that several new consulates were about to be created in the East, under her Majesty's authority, they submitted to the principal Secretary of State for Foreign Affairs the eligibility of duly-qualified members of the profession to fill such appointments in Egypt, Syria, Palestine, Asia Minor, Rhodes, Cyprus, and Candia, in which the most interesting relics of antiquity demand investigation and conservation.

The rule of the French Government to appoint only men of education as consuls in such countries, and the happy results of M. Botta's researches, while French consul at Mossoul, in bringing to light the Ruins of Nineveh, were adduced in favour of the council's representation; and it was urged that architects who had diligently studied their profession would be fitted both to watch over commercial interests, and to secure for our national Museum such remains of antiquity as might, from time to time, be discovered in their respective localities.

The Earl of Clarendon has since informed the council that their request should be duly noted, but he regretted that, with reference to the places named in their letter, other arrangements had been already made.

It is too soon yet, we suppose, to expect our Government to give appointments to the *fittest men*. Let us hope, however, that the time will come.

Lord Harrington has been protesting in the House of Lords, on the part of British sculptors and architects, against the Scutari monument job. Lord Harrington said,—

To execute such a work the first sculptor of the day should have been selected. The gentleman actually chosen was Signor Marochetti, an artist of considerable talent, peculiarly famed for massive equestrian statues; in other branches respectable, but not like Mr. Gibson, and some others, holding a first place in art. As an architect Signor Marochetti was not known to fame; but, indeed, it would be difficult, if not impossible, to find one person equally skilled in architecture and sculpture, as in the days of Michaelangelo. There was nothing very remarkable about the Scutari monument. We had many in this country of the same description. It was very defective in its proportions, inasmuch as the pedestal was as high as the superstructure, whereas the base of Cleopatra's Needle was only one-third the height of the pillar itself. Many obelisks in England were superior to Signor Marochetti's Scutari monument. One point about it was very remarkable; the four unfortunate weeping angels could not possibly stand, for if they did, they must stand either upon their wings, which extend considerably below their feet, or in a flying position. They were in the same position as the statue in the Parthenon, with regard to which the observation had been made, that if it attempted to stand, its head would go through the roof. The sculptors of this country did not wish to disparage the talent and genius of Signor Marochetti, whom they all highly respected, but they complained that a system of favouritism had been adopted, and that equal justice had not been done to the sculptors and architects of this and other countries. Entertaining the same opinion, in justice to those sculptors and architects he would put the following questions to the Government: — 1. By whose authority the Scutari Monument had been undertaken? 2. Who had selected Signor Marochetti to undertake the work? 3. From what fund the payment was to be made? And 4. Why the work had not been subjected to public competition, so that the sculptors of England, France, Italy, and Germany might have sent in models, and an obelisk have been produced that would have immortalized our warriors and the sculptor for ages to come?

Lord Panmure in reply, said, the responsibility of the selection of the artist rested with the Government alone. As to public competition, the noble earl must be aware that the sculptors and artists of this country declined to furnish plans to compete for the erection of public monuments. (?) Signor Marochetti had been selected because he was famous on account of some colossal works that he had executed, and the design for the Scutari monument had commanded public favour, at least so far that he had heard very little complaint made about it, and he thought it had never been condemned in the manner in which the noble earl now condemned it. Baron Marochetti had gained so much reputation in this country, that he was now to be regarded rather as an English than as a foreign artist; but, even if he were a foreign artist, the noble earl, who wished to throw the work open to the competition of the artists of Italy, France, and Germany, could not make any complaint on that account.

A very lame reply, and one with which those who are interested in the advancement of the art of sculpture and architecture in this country ought not to be satisfied.

Westminster-bridge is exciting alarm, and has been taken in hand by Sir Benjamin Hall. The reports in circulation, we do not know on what grounds, speak of insufficient foundations. Be this as it may, on the 3rd, Sir B. Hall, in the House of Commons, obtained the appointment of a select committee on this bridge, to consist of Sir Benjamin Hall, Mr. Henley, Mr. Bramston, Colonel Boldero, Mr. Jackson, Mr. Ker Seymer, and Mr. Tite.—Mr. Locke contended that the House ought to initiate inquiry before the Board of Works undertook the subject.

Sir B. Hall said that due notice had been given that he would move for this committee, and the reference to the committee was made as wide as possible. He justified his own administration of this bridge, and challenged inquiry into his conduct.

The Chief Commissioner's letter to the Metropolitan Board of Works, returning the plans determined on by the Board for the drainage of London, has been severely commented on. Surely, however, the Board could not have expected any other result. Sir Benjamin Hall says, through the secretary, Mr. Austin,—

"By the Metropolitan Act, 1855, it is provided that 'the Metropolitan Board of Works shall make sewers and works for preventing all or any part of the sewage within the metropolis from flowing or passing into the Thames *in or near to* the metropolis.'

But the scheme submitted for the approval of the first commissioner actually provides that the sewage shall flow into the Thames at a point within the metropolis. It consequently follows, that before any such scheme can be carried out, it will be necessary to call upon Parliament to repeal so much of the Act of last session as provides for the purification of the River Thames within the metropolis."

And so, not being willing to do this, and considering that the scheme is entirely at variance with the intentions of the Legislature, he returned the plans which were submitted for his approval.

It is a triumph for Mr. Leslie, and not very creditable to the advising officers of the Board. The unfortunate result, of course, is the postponement of this vital question, at all events for a session.

At a meeting of the Board last week, a report was presented by the superintending architect, on the application of Mr. Munday, asking for the approval of the Board to the raising of an engine-chimney in Cox-square, Spitalfields. The report recommended that the chimney be not raised on the plan proposed, and the superintending architect suggested that the work should be done on a plan that he proposed.

This report led to a long and animated dis-

cussion as to the principle that was involved in it. On one side it was contended that the superintending architect, as the officer of that Board, was not called upon to suggest plans to be substituted for those submitted to him, as by so doing the Board would take upon themselves a great amount of responsibility, and especially so, if the work which was done under the recommendation of their architect should fall down. In that case there would be abundant evidence brought forward to show that those who performed the work did it under the express sanction of this Board, in opposition to the plan originally proposed, and it would then be said that if they had been allowed to do their work in their own way it would have stood, and there would have been no accident whatever. On the other side it was argued that if their superintending architect were to wrap himself up in official reserve, and refuse to explain his objections to a particular plan submitted to him, a hundred plans might be brought forward and not meet the particular point of his objection.

Ultimately the report of the architect was adopted by 13 to 11, establishing, it may be supposed, the principle that the superintending architect may suggest plans in lieu of those submitted to him to which he may object. Without reference to this incident, but as applying to their proceedings generally, which we have watched most carefully with kindly eyes, we must be permitted to say that the Board have yet to establish their reputation with the public as a practically working body. The power they have chiefly exhibited up to this time is that of negation.

WORTH CHURCH, SUSSEX.

THIS very interesting structure is about three miles from the Three Bridges Station, on the London and Brighton Railway, it has long been noted as one of the curiosities of the country, but has not been described at any length until recently. The eighth volume of the "Sussex Archæological Collections," relating to the history and antiquities of the county, recently published by the Sussex Archæological Society,* contains an account of the church, by Mr. W. S. Walford, with several engraved illustrations, which, by the kindness of the committee, we are enabled to reproduce. The general view from the south-east (fig. 1), shows the stone ribs or pilasters on the face of the exterior which distinguish it, and the massive buttresses at the east end added by later hands, that give a peculiar effect to that part of the church. It has a string course and curious base in two stages, bearing a rude resemblance to the graduated plinths of classical architecture. It will be seen by the plan (fig. 2), that it is a cross church without aisles, and that the chancel has a semicircular east end. There is no indication of any tower. A bell-chamber has been erected over the north transept. The walls would seem to consist of rubble, and are mostly plastered externally, with the exception of the stone ribs or pilasters, already referred to. The walls of the chancel are lower than those of the nave, but the roof is higher, being of sharper pitch, and serves to give it a continental aspect.

Within the walls, the nave is 59½ feet by 26½, and the chancel, including the archway connecting it with the nave, is 34 feet 9 inches by 21 feet. The chancel-arch is very effective, both from its size and its proportions. It is 14 feet 1 inch in span, semicircular, and of a single order, measuring at its highest point from the floor 22 feet 5¾ inches. "It springs, at the height of about 15½ feet, from massive semicircular jambs or piers, with remarkable imposts or capitals, each consisting of a flat cushion and a square abacus, with an intervening quarter-round moulding. (See fig. 3.) On the western face of it was a double square hood-moulding, the under member being in lower relief than the upper: of this member (the upper) only a small portion next the north capital remains. The eastern face has a single square hood-moulding, equal in width to the double one on the other. On the same face (*i. e.* the eastern) is a bold half-round moulding, descending from each capital to the floor. The piers and arch are about 3 feet thick, exclusive of mouldings, and the stones of which they are constructed extend through the whole thickness. The work is deficient in the neatness and regularity which are characteristic of Norman masonry. There is a want of parallelism and similarity in parts which should have been respectively parallel and alike. The two capitals, though at first sight alike, will be found dissimilar in their proportions and sectional lines, as if worked by different hands, without the ordinary care to secure likeness where the design did not contemplate diversity. The intended horizontal lines of the north abacus slightly converge, and the half-round descending from the capital deviates considerably from the perpendicular."

The windows and doors are of various dates, and are all insertions, with, perhaps, one exception. The font is described as consisting of two fonts, one upon the other, although this could scarcely be asserted from its appearance alone. They may both be ascribed to the beginning of the thirteenth century. It will scarcely be necessary to say that Worth Church is included in the list of churches, now much larger than it was formerly, ascribed to the Anglo-Saxon period. In most of the churches in this list, we find the walls of rubble, covered with plaster, having long and short blocks of hewn stone at the angles, and in many the narrow ribs, or square edged strips of stone, bearing resemblance to pilasters, and similar to those at Worth. The tower of Barnack Church, Northamptonshire; the church at Barton-upon-Humber, in Lincolnshire; Sompting Church, Sussex; and many others may be pointed to.

Anglo-Saxon MSS. confirm the views of those who ascribe the class of buildings here mentioned to the Anglo-Saxon period. In the illustrated paraphrase of Cædmon, executed about the year 1000, we find amongst the architectural details which appear, these stone ribs or pilasters, the long and short work, triangular-headed openings, and plain graduated footings as at Worth.

The fact that this church is not mentioned in Domesday is simply one evidence that that important record does not comprise all the churches in the county.

Worth Church is probably the most perfect in plan of all the Anglo-Saxon churches, as the original foundation does not seem to have been disturbed, although insertions in the walls, as we have already said, have been made. In Brixworth Church, a building ascribed to the seventh century, the chancel terminates as at Worth, with a semi-circular apsis.

Mr. Walford, although he concurs in the opinion that Worth Church is substantially Anglo-Saxon, sees no reason for believing it to be of earlier date than the first half of the eleventh century. "I incline," he writes, "to think the nave and chancel were not built at once; for the difference in the height of the string-courses upon them, not to mention the variation in form, suggests that the chancel was first erected. Being a forest country, there may have been a temporary wooden nave, which was shortly afterwards replaced by the present, for the interval cannot have been long. The string-courses on the transepts resemble that on the chancel; but then they were never free and independent strings, but were, I conceive, originally introduced merely to carry the roofs, or at least to mark to the eye the roof-bearing lines. Etheldred II. married, in 1002, a Norman princess, who afterwards became the queen of his successor, Canute. She was the mother of Edward the Confessor, by Etheldred. A Norman influence in architecture began to be experienced, it is believed, in this island several years before the Conquest, and it is said to have been encouraged by the Confessor, who had spent some years in Normandy."

His belief as to the date may be correct, but so far as we can learn, there is no sufficient reason why Worth Church may not be a building of the eighth or ninth century, at which time, as we know, stone churches of importance were erected in this country.

The grounds of the rectory-house adjoining form a charming adjunct to the church; and if the visitor would seek other objects of interest,—Wakehurst-place, an Elizabethan residence, the picturesque rocks at West Hoathly, the most beautiful place of its kind in the county, the church of West Hoathly, and the house of Anne of Cleves, will fill up his day pleasantly.

* London: John Russell Smith, Soho-square. The volume includes other matter of much interest, a full and valuable account of Dureford Abbey, by Mr. W. H. Blaauw; "The Families of Brasse of Chesworth, and Hoo," by Mr. W. Durrant Cooper; "Notice of the Abbey of Robertsbridge," by the Rev. George Miles Cooper; "On the Saxon College of Bosham," by the Rev Edward Turner, &c. It is a very good specimen of what the transactions of such societies as this should be.

ON THE APPLICATION OF NATURAL FOLIAGE TO ARCHITECTURE.

IN a popular French work on Mediæval Architecture, the author says, rather quaintly, in his introduction, that "There are people who have good eyes, but who, however, are not able to see that which exists immediately around them,—because they have not thought of or regarded attentively that which is before their eyes. We find men to whom all forms are alike, and who are not able to distinguish that which is beautiful from that which is ugly." He further goes on to say that such persons are imperfect,—they have not developed the faculties which have been given them by nature; and, further, he compares them to musical instruments which are deficient of some of their strings.

In my last I endeavoured to point out the same thing, although in other words,—this mental blindness and disregard of that which is lovely and beautiful, although it may be lying at our very feet. It is necessary to educate ourselves to learn to appreciate the beauty of form and the harmony of colour,—to learn to separate the beautiful from the ugly.

That we are not yet so educated and enlightened is plain from the very many questionable forms of design which surround us. Things which in the streets of this great metropolis meet us at every turn,—in our houses, our furniture, and our various manufactures; yet many of these we are satisfied with, and no one appears to attempt any improvement. Look at our stoves, for instance, and most of the ordinary things formed in cast-iron and intended to be "highly ornamental;" often described to be of "elegant and chaste design," of "superior character." Perhaps it is a cast-iron hunting-whip, with an accompaniment of foxes' heads, with the lash stiffened into loops to hold umbrellas, for this is an example of the wretchedly tame and worthless things we see turned out of the manufacturers' hands every day, under the name of new designs, and it would be a very simple and easy task to point out hundreds of others of a similar description. But such is not my purpose. I would turn to a far more instructive task: I would ask you to accompany me, and let us together endeavour to supply in ourselves some of those things of which the French author spoke that are deficient in us. Let us go heartily to work to cultivate that love and appreciation of the beautiful—the true—and the good which God has implanted in our bosoms,—so that we become better and wiser, and that our eyes may be opened, that we may shun that which is bad and false.

In my former lecture I pointed out the necessity of closely studying natural foliage, if you are at all desirous to put that life and beauty into your work, that freshness and vigour, which is the main cause why we see so much to admire in the sculpture and architectural decoration of every age: whether it be Egyptian, Assyrian, Greek, Moorish, or Gothic, no matter how rudely sculptured it may be, there is an indescribable something that stamps it as a successful application from nature,—no literal and minutely servile copy of mere natural forms, but a judicious adaptation to the purposes required.

On the present occasion I propose to treat more distinctly upon the application of natural foliage for decorative purposes, and I would here premise that it is a difficult matter to lay down rules to say how far nature shall be

WORTH CHURCH, SUSSEX.

Fig. 1.—*General View from the South-east.*

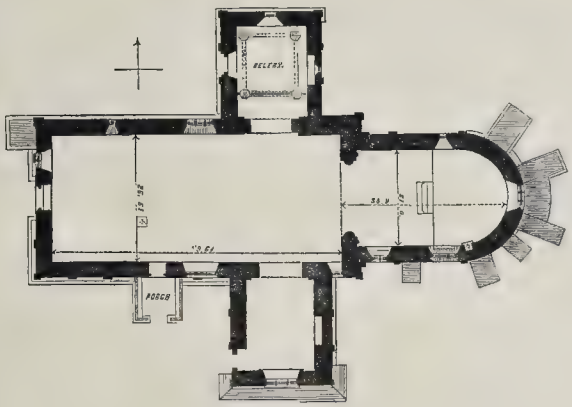

Fig. 2.—*Ground Plan.*

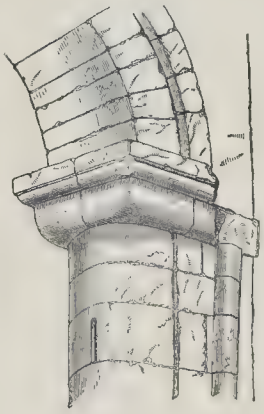

Fig. 3.—*Chancel Arch.*

adhered to, or how far it shall be departed from. This must after all, in a great measure, be left to the skill and fancy of the designer. Literal imitations of nature, although ever so beautiful in themselves, will never constitute architectural ornament. Nature must be followed as a guide, a principle, and wherever her laws are infringed, the work will become unnatural, and what is unnatural must be more or less ugliness.

In modern ornamentation the main idea appears to be, to give as much as possible for the money, no matter how bad it is, if but the quantity make up for the quality. Our chairs, sofas, sideboards, and looking-glasses are covered up with coarse-looking, badly-carved Louis Quatorze scrolls, all bolstering up one against another, as if for mutual support. In this style, too, there is a simple law of nature, which is constantly violated, that is, nearly every scroll is growing two ways—it is growing out at both ends at the same time. This is a fault which is carried to an excess in this style, and in the carvings upon our modern furniture, but it is also more or less common to all the classical styles: it exists in the Athenian ornament, and I am of opinion that it is the great fault in the Ionic volute. Mr. Ruskin has been most severe in the condemnation of this order, but with what justice I am unable to say: there is, however, something about the capital which always struck me as being stiff and unnatural. The two spirals of the volute both grow from the centre: one, as it were, grows out of the other, and gives the capital a remarkably stiff and unnatural appearace. Now, the Roman architects appear to have seen this defect, and often obviated it by discontinuing the volute across the front of the capital, but made them spring from behind the enriched moulding which comes immediately below the volutes, and placed a flower in the centre. This arrangement is also seen in the composite, which is taken from the Ionic.

There may be cases where it would be judicious, to some small extent, to break this rule, and make the foliage grow two ways; but there cannot be a doubt that where it is carried to excess, it leads to nothing but a style which is full of fantastic whims, but soon sinks into unmeaning tameness and insipidity, while those styles which adhere to nature's laws are ever fresh and beautiful. The Gothic styles are entirely free from this fault: I do not remember myself a single example but where the natural law is followed. But you may say, "How is it that the architects from whom we got the Louis XIV. or our picture-frame style, how is it they did not see that what they were designing was not natural?" Because their ideas were based entirely upon former styles, and they lost sight of the necessity of adhering to nature. They thought their conceits were far before nature, and they worked entirely according to whim and fashion. Hence the necessity for constantly studying and referring to nature, that we may at least be *aware* when we are infringing her rules. It is, therefore, highly necessary that we should all understand the simple rudiments of botany. For a book of reference upon this subject, I cannot do better than recommend to you, as I did in my last

lecture, Lindley's "School Botany," as it is a most excellent work, and extremely moderate in price. Botany as a science is rather an abstruse one, but a sufficient knowledge may be obtained by the carver or decorator without a vast amount of study, and it will be quite sufficient for his purpose if he merely studies the various classes from their English names. To a person not versed in Latin, unfortunately, the science is involved in a great deal of mystery by the difficulty of retaining names which are formed upon the Latin language.

It is extremely necessary to study the various kinds of leaves and flowers with the manner in which branches and leaves grow in different species. I will here go through some of the most prominent varieties, with their manner of growing, trusting you will take it up, and pursue the matter further, at your leisure.

Most plants and trees grow either with leaves and branches alternate, or opposite; that is, they are alternate when they spring out alternately at different places upon the stem, not opposite each other, as the ivy, oak, thorn, and the greatest number of plants and trees. They are said to be opposite when they spring off from the same point upon the stem in pairs, each leaf being opposite the other; and when seen upon the top, the branch presents a cruciform arrangement, as in the lilac, maple, nettles, and many other plants. Another mode is, that of growing in a whorl, that is, more than two leaves growing out from the same point upon the stem. The wood anemone, for instance, grows with the leaves issuing triangularly, and when seen from the top, with its triple leaves and six-petalled flower, presents a most interesting example, and a very elegant suggestion for coloured decoration. In Gothic architecture this arrangement was common, and was a favourite, and very natural one, for the foliage in trefoils. Cross wort has four leaves in a whorl, and goose-grass and wood-ruff eight.

The grasses and other plants of that class grow with the leaves issuing from knots, and sheathing the stem. The scrolls of the enriched friezes in Greek and Roman architecture usually issue from sheathed foliage in this manner.

The mistletoe grows in a very peculiar way, by forking or dividing into two at every knot, and the branch ending in two leaves, which fork in the same manner, the berries issuing from the intersections.

Here, then, we can soon see that a little simple knowledge of botany *may* give us a power of variety in the arrangement of the leaves of foliage which we could not possibly have possessed without this knowledge, when we were proceeding only according to our own fancy or at random, although it may happen that we cannot often take advantage of it, either from the smallness of the composition or the difficulty of circumstances in the arrangement; but, on the other hand, there may be cases where it would be of the greatest importance, and give to our compositions life and variety they could not otherwise possess. But perhaps, of all studies, that of the various leaves, of which there is an enormous and endless variety, embracing some of the most lovely forms in nature, presents the most important and the most interesting one.

There is nothing too minute that is not worth noticing, in the veins, ramification of net-work, crumpling of the surface, and many other matters; for although you are not going to imitate the minutiæ, nature in this respect is always immeasurably superior to every art of man. No matter how powerful the microscope, the more we look into her minute and secret ways, the more perfect only does she become; and it is possible that beauties may be seen under the microscope which would be well worthy of being transferred to our art at a much larger scale. Not that I mean to say you must study with a microscope, but only that I wish to point out, by means of this illustration, that there is nothing in nature which is too insignificant for study, and however small and unimportant to the eye, it may still conceal a beauty which would be immeasurably valuable to you in your art. Leaves are of course divided into different classes or kinds. First, there is the simple, undivided leaf, without distinct lobes, which, although so simple, still contains a great variety of forms. They are often used with good effect in carving, and some of them, although perfectly simple, are very beautiful. There is an example of their use in old work in a spandril from Southwell, where two different kinds of simple leaves may be seen in the same spandril; also an example of the hazel, from Winchester Cathedral.

Simple leaves are again divided into distinct lobes, as the *hepatica* and *herba benedicta*, which are divided into three. The beautiful foliage of the Early English period — the period of the thirteenth century—was mostly taken from triple leaves, which were no doubt adopted as being emblematical of the Trinity. The ivy, vine, maple, and many others are divided into five lobes: in the maple each lobe is again cut into three or more parts, and in the vine each lobe is serrated, that is, cut like the teeth of a saw, as is the case with many of the more simple leaves, as the Spanish chestnut, elm, and many others. The thorn, which is a valuable leaf to the carver, is sometimes divided only into three lobes, but more often into five, but sometimes as many as seven, and even nine.

The thorn was deservedly a great favourite among the artists of the fourteenth century, and they have left us many beautiful specimens of their manner of treating it, both in flower and in berry. There are several excellent examples of this in the Museum from the charming little Chapter-house at Southwell Minster, also some from the Continent. It was also the type of much of the foliage which was used at a later period, as at the Chapter-house at Ely, but which became far more conventional, and less like the natural type.

There are also beautiful examples of the use of the ivy, maple, vine, and other five-lobed leaves from Southwell and other places. But to return to the different kinds of natural leaves. The oak-leaf is irregular in the number of its lobes, sometimes having more on one side than the other. This is a leaf which has so much distinctive character of its own, and its being usually accompanied by its well-known fruit, the acorn, that it is usually recognized quicker than almost any other kind of foliage.

There is another kind of oak that has a very elegant leaf, which has been introduced into this country of late years, called the Turkey oak. There are several trees of this kind to be found in the Regent's-park. There are other kinds of leaves which have many lobes, as in the thistle and dandelion. I do not remember to have ever found the leaf of the dandelion in old carvings, but it is a very beautiful leaf, and one that I think might be used to great advantage. The thistle, from its sharp bristling crispness, was another of the old favourites, and was used even more on the Continent than it was in this country. There is a very fine example of a thistle crocket from Bourges Cathedral,—a cast of which is in the Museum.

These are still called simple leaves. A compound leaf consists of several leaves or leaflets, as they are then called, on the same stalk, as in the clover, laburnum, and strawberry, each of which consists of three distinct leaflets; also the rose, which has five leaflets, and sometimes seven. The horse chestnut, and many others, have five or seven leaflets, all issuing from one point on the stem, and are termed palmate, or like a hand.

The ash, acacia, and others have the leaflets in pairs on each side of the centre stalk, with a single one at the termination. Other leaves are doubly compound, as the parsley, which consists, first, of a centre stalk, from which issue other stalks, and from these again issue leaflets. Many of the fern-leaves, most of which are very elegant, are of this kind—that is, doubly compound.

Other leaves are trebly compound, as in double parsley, carrot, and others; but as these are mostly of too complicated a nature for the use of the carver, we need not pursue the subject farther. There are many varieties of the different kinds which I have mentioned, all of which you will find most interesting for the purposes of study. The same plants also will sometimes bear both simple and compound leaves, as in the *herba benedicta*, &c.

Another most interesting branch of study is that of flowers, both as regards arrangement and also general form: as a general rule, the forms are more simple than in leaves, but the arrangement is much more various. Flowers may, like leaves, be divided into simple and compound. A simple flower is either entire and undivided, as in bell flowers, or it consists of a certain number of leaves, or petals, as they are technically called, usually radiating from a centre. The most simple, except those which are entire, consists of three petals, as the snowdrop. Others are cruciform, of four petals, such as the wallflower and stock. But by far the most common number is that of five, as in the common primrose, dog-rose, and many others. We see the five petals in the ordinary Tudor rose, which is taken from the common dog-rose. The wood anemone and jonquil have six petals; pilewort crowfoot eight. The stichwort, or stellaria, has five petals, each petal being again almost divided into two, giving a star of ten points. The iris, from which the conventional fleur-de-lis is taken, consists of six petals, three of which turn upwards, forming a kind of crown, and three turn very gracefully downwards. The similarity to the conventional form of the fleur-de-lis is plainly seen, when one of the petals which turn upwards is brought in the centre. It is a beautifully symmetrical flower, and offers, I think, a fine suggestion, as no doubt it has often hitherto done, for a very elegant metal finial. It is a very common thing to make metal fleurs-de-lis consist only of three parts, two lower leaves and one in the centre, as they are represented in painting or sculpture; but what an improvement it would be if they were made triangular, with all six petals, as in the natural type.

The lilies also are of six petals, and are arranged much in the same manner as the wood anemone and jonquil. The lily has been from time immemorial the emblem of purity, and from its triple combination it is also a beautiful emblem of the Trinity: it is not surprising, therefore, to find that it was the type of many of the most beautiful forms in Gothic architecture, as the different varieties of the hexafoil triple bosses, spandrils, &c.

There are also a vast variety of flowers which do not radiate from the centre, as the heartsease pea, orchids, and a variety of others,—many of them offering beautiful suggestions in form and colour, and opening altogether a field for study, which, for decorative purposes, has been comparatively yet untrodden.

Compound flowers consist of a number of small flowers, or florets united upon a disk, as in the sunflower and daisy, or they form a cluster, called an umbel, as in parsley, a spike as in the fox-glove and lupin; or they are clustered together in various ways or forms, too numerous for me to mention.

In applying natural foliage to decorative purposes, the first thing to be laid down is the general lines, that is, the direction and disposition of the stems which are to be afterwards clothed with foliage. Great care should be taken that these are judiciously chosen: they must not too closely follow nature: there must be no broken or rustic foliage, such as we so often see in silversmiths' work: there must be a harmony, and an agreeable contrast with the boundary or surrounding lines. In architecture nearly all ornament is obliged to be arranged geometrically, for without it is so to some degree it will seldom harmonize happily with the architecture which it is intended to enrich. It may sometimes be departed from to a small extent to give variety, and to gain picturesque effect; but there must be a certain harmony kept up, and the lines of the foliage must not jar or clash with the mouldings, or other architectural lines which surround it. For instance, if we take a spandril, which is merely a triangular space left by the architectural lines in canopies and other places,—the most simple of all lines, to arrange the foliage upon, will be three lines issuing from the centre, and running to the points of the triangle. These lines are in harmony, because they do not approach too near, or in any way jar or interfere with the bounding lines, and they are simply a geometrical division of the triangle into three other triangles. In the same manner if we require the most simple lines for foliage in a

square, we have them immediately in lines proceeding from the centre to each of the angles, which give the ordinary diagonal lines. Next in the triangle we have a triangle introduced in the centre. In the square we may introduce the diagonal square, touching the centres of the sides of the larger square. This may be varied by introducing circles in place of the triangle or square: from this we arrive at the scroll in place of the complete circle. Commencing again with our first three lines, we can produce variety by uniting them by curves;—further, by branching as in parsley; by leaflets in pairs, as in ash and fern; branching alternately as in oak; and farther, if required, can be carried to any extent of elaboration and richness, by following the manner of subdividing of any of the more compound leaves, as in some of the most beautiful and delicately divided ferns. Although this subdivision may probably be too elaborate to carry out in stone or wood; yet I can conceive of its opening a beautiful field for decoration in other materials, such, for instance, as diaper for linen fabrics, carpets, gold and silversmiths' work, painted decoration, papers for walls, and many other works.

To return to our general lines, it is evident that variety can be gained by introducing scrolls, yet still keeping up all the original arrangement, until at last we arrive at a combination perhaps equal to the beautiful scroll spandril from Stone Church, Kent, which, perhaps, for the very charming manner in which it is arranged, is as successful as anything which can be met with.

Another simple mode of arranging the lines is that of simply radiating from the centre, as in flowers; the most simple being three radiations, or two threes, as in the lily, as I have already mentioned; four, two fours, and so on, as in flowers. Another mode is that of fan radiation, as in the lupin and horse-chestnut. Of this character are many of the Greek honeysuckle ornaments. If the surface is large, which is to be covered with foliage, it will be found highly advantageous to divide the surface into some pleasing combination of geometrical forms, afterwards filling in the spaces left with foliage. In this manner are some of the most exquisite wall diapers of the Alhambra. Geometrical combinations have this great advantage, they are all founded on forms in nature—there is no limit to the variety which can be produced, and they do not tire the eye like any confused or irregular arrangement. There is always a certain order and symmetry which are pleasing to the eye.

No better practice can be conceived in the study of decoration, than that of making skeleton diagrams of the general lines, or stems, merely, in the various compositions, both classic and Gothic, which are collected together in this museum: you will perceive what variety there is, and upon what principles they are laid out, and you will farther put yourself in a position to strike out other combinations which have not yet been developed.

In this study you should treat everything in the flat. If it be a capital, or a crocket, or a boss, unwrap it and lay it out in the flat, so as to study the first principles independent of the curved surface to which it is afterwards applied. Having well studied the stems or general lines, you will find the next step comparatively easy—that of clothing with leaves and flowers the general lines which you have laid down.

Here again you will find that the forms of leaves are intimately connected with geometry.—that they are based either upon the triangle, the square, the pentagon, or the circle; and that often the space to be filled in will suggest the kind of leaf to be used. You have then to study the light and shade, as I more particularly explained in my last lecture; and by following the matter up with a constant reference to nature, and without tying yourself down to copying old examples, looking at them more for the ideas they contain, and for the purpose of comparing them with nature, seeing what their designers took from the great book, and what they left, you will soon find that you are enabled to take a more comprehensive view of foliated design than you had ever before imagined, and you will begin to strike out new and independent beauties, which in time cannot fail of producing the happiest results. I feel certain myself that there is a field open to us in ornamental and foliated design of which we have yet no conception, going far beyond anything which has been already done. *I* cannot develope it, and *you* cannot develope it, individually—but it must be the work of an age, the work of all—all working in the right direction. We should thus produce something in art which would yet be a glory and a halo around the setting sun of the nineteenth century.* JAMES K. COLLING.

THE INSTITUTE AND THE ARCHITECTURAL ASSOCIATION.

THE letter recently addressed by the Council of the Royal Institute of British Architects to the Architectural Association, and printed in your paper last week, will, I trust, ultimately be the means of bringing about the fusion into one general institution of all the societies at present representing the architectural profession,—an institution which shall embrace within it all classes of the profession, and carry out under one general direction the various objects which existing societies, owing to limited resources and other causes at the present time, but imperfectly represent.

If, sir, we are to accept as genuine the expressions of sympathy which the Council of the Institute, in the letter referred to, evince towards the Architectural Association, we may reasonably infer the Institute desires the fusion of the members of the Architectural Association into their Society; and by the concluding paragraph in the letter, in which the Council expresses itself as follows,—"In conclusion, the Council desire to record their opinion, that every alienation among its members tends to a lowering of the social weight and position of the profession as a body, and that a policy of affiliation is infinitely to be preferred to one involving repulsion or isolation," we may reasonably infer that the Institute desires to make its own body the one into which all other existing societies belonging to the profession should be merged. But to effect so desirable an object, the Institute must take the initiative, and materially liberalize its constitution, or it will be useless for the Institute to attempt to incorporate within its own body those societies which at present exist external to and independent of it. But what says the letter to the Architectural Association upon this important point: "Slight modifications can be made in the bye-laws of the Institute, but no alteration can be introduced into the charter." Of what use, then, is it suggesting a fusion with the Architectural Association, or any other body, if the same exclusive management of its affairs is still to be maintained? Surely the laws of the Institute are not like the laws of the Medes and Persians, that they *cannot* be altered. Is it not rather the *will* than the power that is wanting?

If the Institute were a private society, it might be considered impertinent in me, or anybody else not belonging to it, to criticize its constitution or management; but now (whatever might have been its former status) it has obtained the recognition of the Legislature, and has been invested with powers of a character which places its proceedings out of the pale of a mere private society, I consider I have a perfect right, as one of a body whose interests it professes to represent, to criticize both its constitution and management. As it appears to me, the Institute, as at present constituted, only exists for the benefit of the elder members of the profession, viz. the fellows, the younger men being carefully excluded from all participation in its management. The grievance would not, however, be so great if those who assume the management of the Institute really did their duty to the profession, and were foremost in every good work set on foot for the benefit of our art; but such, unfortunately, is not the case, but the reverse. Take, for example, the Architectural Exhibition,—an institution which I do not hesitate to say has done more real good for the cause of architecture during the short period of its existence than has been effected by the Institute since its establishment twenty years since; and it is anything but creditable to the Institute that to this hour the Architectural Exhibition has not received one farthing support from it, although it was well known that for a considerable time its usefulness was impaired by the pecuniary difficulties with which it was encumbered.

The younger men in the profession have also a special ground of complaint against the Institute, considering the way they have been treated by that body. It is all very well for the Institute to express sympathy for the Architectural Association; but if the Institute had done its duty there never would have been any necessity for the establishment of the Architectural Association. Ten years ago, when the Architectural Association began its career, it might have been possible for its members to have carried on their studies under the guidance of the Institute, but most of those who were then students are now in practice for themselves, and do not now stand in need of the proffered sympathy of the Institute, which then would have been gratefully acknowledged; and while expressing myself thus, allow me to reiterate my humble testimony to the sympathy and support which you, sir, personally afforded the Architectural Association when it began its career. I am induced to refer to this subject because I consider you have been unjustly spoken against by some of our friends at Lyon's Inn Hall, who, in consequence of their having but recently joined our society, cannot be supposed to have such an intimate knowledge of the real state of the case as myself and others, who, as you know, were of the first in bringing about the establishment of the Architectural Association.

Depend upon it, sir, the Institute will never enlist the active earnest co-operation of the younger men of the profession until they abolish the invidious distinction at present existing between associates and fellows, and admit all alike, who, from ascertained competency, are qualified to act as architects, into full fellowship, and a due share of the management of the Institution. In my opinion, sir, the seven years' practice qualification for full fellowship is one of the most absurd as well as the most unjust that can possibly be conceived, and the abolition of it would be the most effectual means of drawing into the Institute all other societies at present existing independent of it.

As a practical illustration, suppose, for example, the case of two youths fresh from school, of equal age, and both of average abilities, articled in the same office,—the one the son of rich parents, and the other, with nothing to depend upon for advancement in after-life but his own unassisted talents. The term of articles expire, and the one, our well-to-do friend, mounts a brass-plate on his door, and dubs himself "architect and surveyor;" and, as the phrase goes, "gets into practice." The other, perhaps the most competent of the two, from want of interest to push him forward, is glad to engage with the other as his managing clerk. In progress of time our well-to-do friend is duly admitted a Fellow of the Royal Institute of British Architects, while his brother pupil, and now managing clerk, remains, as far as his status in the profession is concerned, in exactly the same position as when he was first out of his articles. This is no imaginary case, and I appeal to the experience of your readers as to whether I am over-stating it. If, then, what I assert is true, is it fair, is it just, that the distinctions maintained in the Institute should be continued?—or is it likely the younger men of the profession will earnestly and actively support an institution based upon such exclusive and selfish principles?

Only let the Institute so far liberalize its constitution, and admit all who are justly entitled to the distinction into full fellowship, and let personal competency alone be the test, and a practical solution of the diploma difficulty would be obtained; because the recognition by the Institute, or such a society as the Institute might become, after due examination, would be a virtual qualification for an architect to practise, and would justly entitle him to consideration and respect as such. But constituted as the Institute is at present, its highest

* Read at the Architectural Museum, Canon-row, Westminster, June 23, 1856. The publication of Mr. Burges's paper on Leadwork, which was read previously, has been delayed by the preparation of illustrations.

grade of membership confers no real honour, because to obtain it, good fortune rather than talent is what is most required by the candidate. A man has only to practise as principal seven years, I ought rather to say ostensibly practise, because he may carry on his business by deputy, and it makes no difference as to his qualification; and herein lies the chief injustice of the case, because it is notorious that many men who have a high reputation for talent as architects are the greatest Pecksniffs in existence, and are wholly dependent upon other and younger men for the reputation they possess; whereas, if a personal qualification was made the test by which a man became a fellow of the Institute, quackery would most effectually be kept out of the profession.

I have addressed myself to you, not so much because I can expect you will concur in all that I have said, but rather because I regard the *Builder* as the most suitable medium for discussing all subjects connected with architecture and the welfare of its professors: on this ground, therefore, I trust you will give insertion to my remarks.

CHARLES GRAY.

THE LATE MR. GEORGE GWILT, ARCHITECT.

MR. GEORGE GWILT, F.S.A. whose conscientious restoration of the choir and tower of the church of St. Mary Overy, in the borough of Southwark, and of the Lady Chapel belonging to the same edifice, entitles him to the grateful remembrance of archæologists and of all who take interest in the conservation of our ancient ecclesiastical architecture, expired on Thursday, the 26th ult. at his house in Union-street, Southwark.

Mr. Gwilt was the elder of two sons of Mr. George Gwilt, an architect and surveyor, also of St. Saviour's, Southwark, where his family have resided more than a century; the younger son being Mr. Joseph Gwilt, the well-known author of "The Encyclopædia of Architecture," and other important works.

Mr. Gwilt, sen. was surveyor for the county of Surrey; and, amongst other buildings, he erected Horsemonger-lane Gaol and Newington Sessions-house. He died on the 9th December, 1807. His son George was born on the 8th of May, 1777, and he was consequently in his eightieth year at the time of his death.

He was brought up to his father's profession of an architect, and succeeded his father in his professional practice on his death. His chief work, and that with which his name will always be worthily associated, was the restoration of the choir and tower of St. Mary Overy's Church, already referred to, and the Lady Chapel, which Mr. Gwilt executed with much taste and judgment; though as regards the choir and tower, at a very great expense to the parishioners of St. Saviour, who, although proud of their fine church, were not well pleased to have incurred a debt of 35,000*l.* for the restoration of a part of it. This work was performed between 1822 and 1825. With Mr. Gwilt such works were labours in which he delighted, and when, through the indefatigable exertions of the late Mr. Thomas Saunders, F.S.A. the Lady Chapel was rescued from destruction, and its restoration effected by means of a public subscription, exceeding 3,000*l.* Mr. Gwilt liberally undertook the professional direction and superintendence of the work, and performed it gratuitously.

This was completed in 1833, and the late Mr. Carlos, in a short description of it in the *Gentleman's Magazine* (March, 1833, p. 254), says, "When the former appearance of the building, dilapidated by the effects of time and neglect, and injured by partial and tasteless repairs, is forgotten, and the masonry of the new work shall have lost its freshness, then will the design be viewed with even greater satisfaction than at present, and few persons, strangers to the former state, will conceive that the antique-looking building before them is a restoration of the nineteenth century. Every praise is due to Mr. Gwilt for the scrupulous accuracy with which the mouldings and detail of the former design have been copied, and equally so for the care and attention which he has bestowed on the restoration of those parts which had been entirely lost: of this the gables are instances: of these only two remained in anything like a perfect state."

Mr. Gwilt was admitted a fellow of the Society of Antiquaries, on the 14th of December, 1815; but although he delighted in the collection of antiquities, and possessed a valuable store, as well of objects of interest as of information of a varied character, we do not find that he ever contributed anything to the "Archæologia."

He was, however, an occasional contributor to the *Gentleman's Magazine*, and amongst other articles there are two valuable communications from him in March and June, 1815 (pages 244 and 513), on the remains of Winchester Palace, Southwark. Letters from him have at different times appeared in our own journal.

We hope that his collections will not be dispersed without an opportunity being afforded of giving the antiquarian world an account of them, and Mr. Gwilt's own observations cannot but be of the greatest value in their illustration.

Mr. Gwilt had three sons and four daughters. Of the sons, George, the eldest, who died at an early age, was a young man of great promise in his profession of an architect. His early loss was much lamented. The second son, Charles Edwin, also an architect, died early. He contributed to the "Archæologia" an Account of the Remains of Part of the Prior of Lewes's-house, in Carter-lane, St. Olave's, Southwark (vol. xxv. p. 604). The third son, Alfred, survives.

For many years Mr. Gwilt had been subject to a painful complaint, but notwithstanding that circumstance and his great age, he was to the latest period of his life devoted to antiquarian pursuits; and so lately as the 12th of June last, he attended the meeting of the Surrey Archæological Society, at Croydon, being then in tolerable health. The loss of Mrs. Gwilt, however, who died but a few weeks before him, had been severely felt by him.

He was buried on Monday, the 7th inst. by special authority of the Secretary of State, in his own vault, on the south side (outside) of the choir of St. Saviour's.

WOOD, THE ARCHITECT.

THE BATH QUARRIES.

As your correspondent, "Wm. J. Green," has fallen into error in his communication in the last number of the *Builder*, allow me to set him right. He refers to Wood's "Essay towards a Description of Bath," as *published by himself*, in 1765. My copy of the essay, the second edition, was published in 1749. At all events, Wood died in 1754. As his obituary, which appeared in the *Bath Journal*, of May 27, in that year, is a curiosity in its way, it may interest your readers if given at length:—

"Last Thursday morning, about three o'clock, died, after a long and tedious illness, in the fiftieth year of his age, John Wood, Esq. one of his Majesty's Justices of the Peace for the county of Somerset, celebrated for his designs, plans, and skill in architecture, more particularly those in this and a neighbouring city,—the second great mercantile trading city in the kingdom: all which is well known to be the effect of his great genius, as well as undefatigable* study and application in this noble and useful science. Amidst a world of *calumnies*, *falsehoods*, and *discouragements*, which he bravely surmounted, he not only raised himself in the esteem of his superiors, but, in the compass of a few years, by an honest and commendable industry, obtained a handsome competency for himself and family. In a word, he had no enemies but those who either envied him themselves, or went too far in crediting the *defamatory reproaches* and *scandal* of others."

Your correspondent also states that the existence of a tram-road from the quarries on Hampton Down, "plainly shows the site of the quarries in possession of Mr. Allen." In an old print of Prior-park, which is now become rare, Allen's tram-road is shown to be a portion of the present carriage-road leading from the city of Bath to the mansion, and a stone waggon is represented as descending on the rails, while a coach, drawn by two horses, is proceeding up the hill in close proximity. The tram-road referred to by your correspondent was constructed for the purpose of conveying stone from the Hampton Down quarries to the Kennet and Avon Canal, which was not opened for traffic till nearly the close of the last century. Allen's wharf was on the banks of the Avon, nearly opposite the present Bath Railway Station; while the wharf at the termination of the Hampton tram-road was nearly three miles off, and the same distance above where the river Avon is navigable.

BATHONIENSIS.

* In original, as are the italics.

PROPOSED MEMORIAL CHURCH AT CONSTANTINOPLE.

WE are requested, by the honorary secretaries of the committee for building the memorial church at Constantinople, to give publicity to the following letter received by them from the honorary secretaries of the Royal Institute of British Architects, with the hope of facilitating the acquisition of the information therein suggested as desirable to be obtained:—

"We are instructed by the Council of this Institute to offer you their congratulations on the prospect of a church being erected in the East, which shall be a record at once of the faith and of the art of Western Europe.

The Council have urged on their fellow members of the Institute the propriety of vindicating, in their response to your invitation, the great capability for erecting works of a monumental character which they believe English architects of the present day to possess; and they will feel much gratification in co-operating in any other manner in the furtherance of your views.

As allusion is made in your programme to the qualities of the local materials, they would suggest that much practical advantage might result from your obtaining, if possible, specimens, with the prices and particulars of their relative excellence and durability.

The designs might also be made more appropriate for the site determined on if reference could be made to a map, showing the position, aspect, approaches, and extent, and to photographs, exhibiting the scenery and buildings of the immediate locality. Practical information as to native peculiarities of construction, and the modes of letting works to be executed, would also assist in rendering the results of the competition more satisfactory than they could possibly prove in the absence of such details.

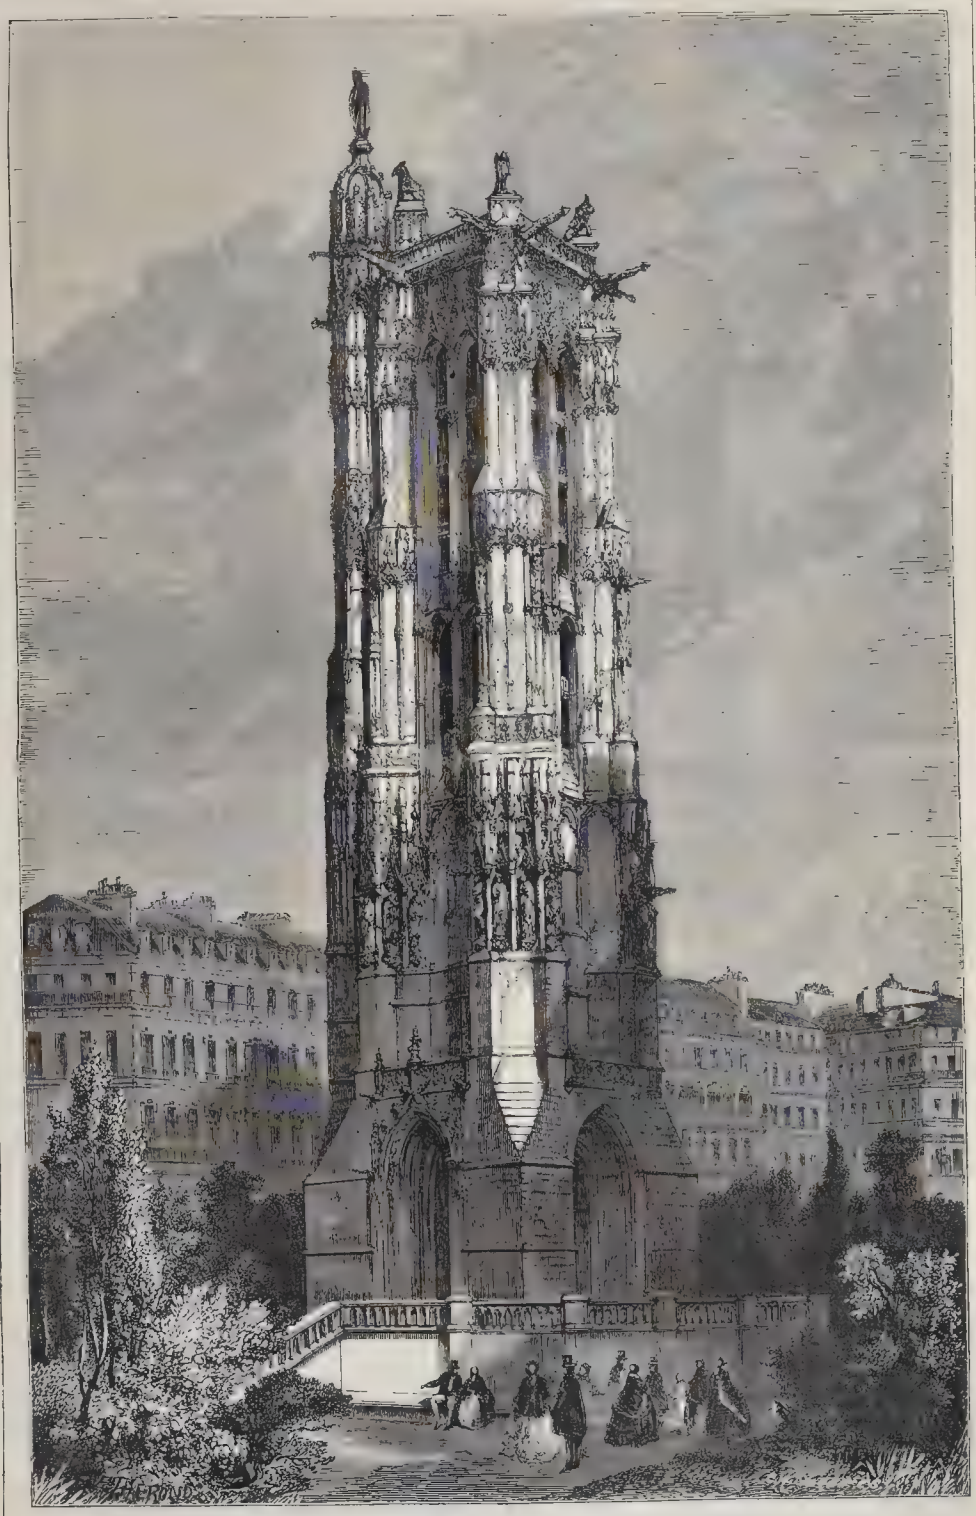
Impressed with this feeling, the Council propose procuring, as far as they may be enabled, from their foreign correspondents, information of this kind for the benefit of those members of the profession who may be induced to compete.

In conclusion, the Council desire to express the pleasure with which they will receive and exhibit in these rooms specimens of materials, maps, photographs, price lists, and whatever farther practical particulars you may think it desirable to obtain from Constantinople; all of which, when received, would be at once brought under the notice of the profession.

With every hope that the results of the competition may prove satisfactory to the promoters, and favourable to the talent of this country,

We have the honour to remain," &c.

NATIONAL ORPHAN HOME, HAM, SURREY.



THE first stone of the new building of the National Orphan Home, Ham, Surrey, was laid on the 2nd inst. by the Marquis of Clanricarde (who presided in the absence of H.R.H. the Duke of Cambridge, through illness). Five hundred friends of the Institution sat down to a *déjeûner*, and at the table a collection was made of more than 1,000*l.* for the benefit of the Institution.

The new building is planned to accommodate 200 children, and contains on the ground-floor, two schoolrooms, 40 feet by 20 feet, with class-rooms adjoining each; two dining-rooms, 45 feet by 24 feet each; two lavatories; separate rooms for the matron, master, and assistants; also separate rooms for the committee, chaplain, secretary, lady and gentlemen visitors' rooms, &c. In the rear of the main building are the kitchen and offices. On the one and two-pair floors are the dormitories, with bath-rooms fitted up with hot and cold water. The two-pair floor is also fitted up with infirmaries, with spacious lead flats for the invalids to take airing exercise upon. The architect is Mr. E. C. S. Blake.

TOWER OF ST. JACQUES LA BOUCHERIE, PARIS.

ALL visitors to the old part of Paris will remember the picturesque tower of the church of St. Jacques la Boucherie. The church itself, of early foundation, was destroyed at the close of the last century, leaving only the tower, which was appropriated for the manufacture of shot. In 1836 it came into the market, and was purchased by the municipality. Recently it has been restored, and plantations formed around it, giving it the aspect shown in our engraving.

M. Guilhermy, quoting M. Vilain, the historian of the church, says the tower was commenced in the reign of Louis XII. 1508, and was not completed till 1522. The statue of St. James, the major, on the summit of the turret, thrown down on the pavement by the revolutionists, has been restored. Large sculptured animals occupy the other angles of the tower.

THE TOWER OF ST. JACQUES LA BOUCHERIE, PARIS.

PROVINCIAL NEWS.

Lynn.—The greater part of the new workhouse, in place of that which fell about two years since, has been finished. Messrs. Medland and Maberly, of London, are the architects; and Mr. Bennet, of Lynn, the contractor. The portion already completed is the main building, comprising the day-rooms and dormitories for the adult male and female paupers, the masters' and matrons' apartments, domestic offices and stores, and the dining-room and chapel, together with the work-rooms, washhouses, laundries, &c. and the boundary-walls surrounding them. The schools and dormitories for the children, forming a continuation of the main building, and the entrance buildings to the infirmary, are now in progress, and the erection of the lunatic ward will complete the design. Internally the chief feature is a corridor, running three ways from the entrance wall, viz.—north, east, and west, somewhat in the form of a cross. By this means it is intended that there shall be complete supervision over the whole building. The chapel has an open roof, with a large window at each end filled with tracery of the Perpendicular period of Gothic architecture. Warming by steam, with the ventilation, have been carried out by Messrs. Haden, of Trowbridge. The buildings externally may be said to partake of the Domestic style of architecture prevalent in the reigns of the Tudors. There is an arrangement of white and red bricks round the windows and doors and at the quoins and gables, and various designs of crosses and other devices are worked in red, white, and black bricks over various portions of the principal elevations. The entrance buildings now erecting contain the guardians' and clerk's apartments, together with the porter's-lodge and receiving-rooms. The centre of the main buildings is crowned by a large ventilating turret with a gilt vane, and on the extremities of the wings are other turrets of a similar character, but smaller dimensions. The chimney-shaft, upwards of 70 feet in height, is built of red bricks, with bands of white, plain, and in patterns worked at intervals up its entire height.

Spalding.—The foundations of the new butter and poultry-market houses have been excavated and some progress made in forming solid concrete for the erections.

Norwich.—At a meeting of the town council, last week, it was stated that an attempt is being made to get up a company to erect a new fish-market.

Chelmsford.—At the Essex quarter sessions, just held, the committee on the works at the Shire hall reported on the erection of the new stairs, and stated they had ordered that the corners of the grand jury-rooms should be rounded off, in the hope of improving the hearing. The estimate for one part of the work had been 150*l.*: it was completed for 127*l.* and the whole expense of what was done amounted to 366*l.* 11s. There were other matters of importance to be attended to in the building, and the committee was continued.

Hornchurch (Essex).—The opening of the new parochial schools in this place took place on the 29th ult. A description of the design for the buildings appeared in our journal on the occasion of laying the foundation-stone. Mr. F. Beesley was the architect. The work has been carried out by Mr. J. S. Hammond, of Romford, at a cost of about 1,100*l.* realised by voluntary subscriptions.

St. Albans.—Tenders for the new corn exchange at St. Albans were to be received on Tuesday, the building to be erected in Hertingdon white bricks with plinths, friezes, arches, &c. of Corsham Down Bath stone, or the whole of stone. There will be two entrances, one at each end, and seven windows on each side. Besides the light thus admitted, the segments in the ceiling will leave space for a half glass roof. It is intended to have the building finished during the present year.

Bedminster.—A new school was opened at Bishopsworth on Tuesday in last week. The building contains a school-room for 150 children, a class-room, and a master's residence.

Wolverhampton.—A temporary "people's park," intended for the recreation and amusement of the working classes of this town, was publicly inaugurated with some ceremony, on Monday in last week. The temporary park is a field of between eight and nine acres, lent until Christmas next by the proprietor. It is situate at Newbridge, on the Tettenhall-road, about a mile from the Market-place. Benches, quoits, &c. have been gratuitously provided.

Birmingham.—The foundation-stone of St. John's Schools, Ladywood, was laid on Thursday before last on a site contiguous to Monument-lane. The buildings will be erected by Mr. S. Briggs, of Birmingham, from designs by Mr. Teulon. It will afford accommodation for about 600 children. The estimated cost of the schools, with residence for master, &c. is 3,000*l.* and of this sum 2,652*l.* have been already subscribed. The land on which the schools are about to be erected has been partly given, partly purchased, 600 yards of it being given, and 1,065 yards purchased at a cost of 418*l.* The contract for the building of the schools, &c. amounted to 2,338*l.* a further expense of 244*l.* being incurred in the architect's plans and in law charges; making the total of 3,000*l.* The schools will be adapted for 200 boys, 200 girls, and 150 infants. The boys and girls' schools will be separated by a moveable partition, and the principal school-room, being 90 feet by 31, will be available for lectures, congregational gatherings, &c. The infant-school will be 40 feet by 20, and entrances to the different schools will be provided from different streets. The teacher's residence is to be erected in the immediate vicinity, where a site has also been secured, for the erection of other educational buildings, if required.

Warwick.—A meeting of the shareholders in the Warwick Corn Exchange was held on Saturday before last, to consider the propriety of enlarging the building, and increasing the capital of the company. The chairman stated that the directors had had two plans before them, one for carrying out the building to a greater length, but at the same width as at present; and the other for erecting a large room at the end of the present one, and completing it in an easterly direction, to the extent of the ground belonging to the company. By the first scheme they would get twenty additional stands, by the other twenty-eight. The estimate for the smaller extension was something like 1,000*l.*; for the larger, 1,600*l.* It was resolved to adopt the former plan, and to increase the capital of the company by 1,500*l.* in 750 new shares.

Liverpool.—The water from the new works at Rivington has not yet been brought to Liverpool, though it was to be ready for delivery by May, 1856. The deepening of the existing wells, to keep up the supply till the water is received from Rivington, has had the effect of draining dry several private wells in the outskirts.

Oldham.—The opening of the Victoria market, in Tommyfield, took place on Saturday last. The market has been erected by a company of sixty shareholders, at a cost of 5,000*l.* with power to increase their capital to 10,000*l.* and sell the market to the corporation if deemed desirable.——The new conduit of the Oldham Waterworks, leading from Besom Clough to the reservoirs of the company at Strinesdale, was also opened on Saturday.

Darwen.—The new Roman Catholic school at Over Darwen was opened on Sunday before last.

Yarm.—This town was lighted up with gas for the first time on 27th ult. The contractor was Mr. Wm. Wilson, of Castleford.

South Shields.—Mr. Ranger, superintending inspector to the General Board of Health, visited South Shields, last week, to examine the plans and sections for the drainage of a large portion of the borough, and after going over the district, says the local *Gazette*, he entirely concurred with the views taken by Mr. Thompson, the borough surveyor. Since then the plans have been forwarded to London in order to receive the consent and seal of the General Board of Health. The work will be commenced forthwith.——The lower portion of the Ogle estate, comprising Catherine, and all other side streets, has been sewered and drained, as well as the footpaths widened, and the streets paved, under the direction of the town surveyor.

Forres.—The local *Gazette* states that Forres House is being renovated. The oriel windows in the south-west front have been finished, and those corresponding at the east are in progress. The porch or porte-cochère is to be enlarged to harmonise with the other alterations. The internal finishings are said to be conducted on the most approved style of modern comfort and elegance,—pipes for water, hot and cold, fitted up,—with baths and other accommodations.

CHURCH-BUILDING NEWS.

Bourn.—The various works in connection with the improvement of Billingbay parish church being now complete, it is to be re-opened on the 22nd instant. Besides the sittings and furniture (Mr. Jordan, the contractor), an organ is about to be erected.

Peterborough.—The decoration of the altar ceiling of the cathedral, under the direction of Mr. Scott, is nearly completed. In the centre will be represented the figure of our Saviour and his twelve Apostles, six on each side. The whole is encircled by an elaborate border, around which is written, "I am the vine," &c. The vine has the appearance of being suspended in the air. The pattern is too large.——Progress is being made towards the completion of St. Mark's Church. The builders (Messrs. Ellis and Son) expect that the church will be ready in September. The workmen are busy in the interior dressing off the stone pillars and arches. The roof is also being stained, and the last coating of plaster laid on. The large window at the south entrance will contain the arms of each bishopric in England and Wales in stained glass, presented by Mr. Whalley, late M.P. for this city, and this will be the only stained window in the church. The tower has nearly reached the intended height, and if the design be carried out, will be surmounted by a spire, but the funds at present in hand, it is feared, will not admit of this.

Lymington.—A new church for Lymington is talked of.

Basingstoke.—A meeting of the Town Council, acting as the Burial Board for the town and parish, was held on 1st inst. when the town clerk reported that he had caused advertisements for plans, specifications, and estimates for the new cemetery to be inserted in the *Times*, the *Builder*, and the local papers, and laid before the meeting a draft memorial to the Lords of the Treasury, praying them to approve of the Burial Board borrowing a sum not exceeding 3,500*l.* for the purpose of providing the new burial-ground, which memorial was settled and approved, and directed to be forwarded to the Lords of the Treasury. It was then resolved that the burial-ground for Nonconformists should be on the east side of the new cemetery.

Frome (Somerset).—The parish church has been re-opened. The restorations of this church were commenced in 1846. An attempt was then made to bring back the chancel to what it used to be in former times. When the authorities came to overhaul the place they found that the parish engine occupied one chapel, and that the bell-ringers had taken possession of another. The chancel was taken down, and newly roofed in carved oak. There were five chapels discovered and restored. Several memorial windows were put in. A new communion rail was erected. The chancel is now fenced off. From the body of the church all traces of the galleries have been removed: the whitewash and plaster, &c. have been taken away, and a number of arches have been scraped and rubbed up. After the galleries went the pews, and the high-backed pews have been replaced by narrow, low-backed benches, without doors. Over the altar is a large stained glass window.

Devonport.—Wycliffe Chapel, for Independents, was opened on Thursday in last week. It is situated in the principal street of the town, is in the Early Pointed style, and consists of a nave and aisles, with a vestry at the south end. There is accommodation for about 640 persons, including the gallery (over the entrance vestibule), which is intended for the poor and the

children of the schools. The nave is separated from the aisles by an arcade of five bays, with arches springing from circular stone shafts (having moulded caps), and supporting a plain clerestory. The north end of the nave has a large five-light geometrical window: stained glass has been used sparingly in some of the smaller windows. The roofs are open and high pitched, and the timbers (together with the pews and doors) are stained, and will be varnished. The pews are to be uniformly cushioned throughout. Adjoining the chapel on the east side is a parsonage, containing ten rooms; and on the basement floor is a school-room for 400 children, with class-rooms and chapel-keeper's apartments below the aisles. These are, however, at present in an unfinished state: so also are the boundary walls. The materials used for the walls were the native limestone, with Bath stone dressings. The total cost of chapel, school, and house, exclusive of boundary walls, has been about 2,000*l.* The architect was Mr. James Hine, of Plymouth.

Barmouth (Wales).—On 24th ult. the new Wesleyan chapel in this town was opened for divine service. The chapel stands in the centre of the town. The contractor, designer, and builder was Mr. John Evans, of Llanfair-careinion.

Coventry.—Holy Trinity Church was re-opened for divine service on Sunday before last, after being re-seated and repaired. Mr. Scott was the architect, and Mr. Ruddle, of Peterborough, the contractor for the re-seating. Additional accommodation is provided by the alteration. The south side of the nave, from the pulpit to the west door, is free and unappropriated.——About 1,300*l.* are already promised towards the St. Michael's Chapel building fund.

Orston.—The following were the tenders lodged for the erection of a vicarage-house at Orston, near Nottingham. Mr. Baily, of Newark, architect:—

	Brick.	Stone.
T. Lane, Newark	£930	£965
J. S. Ferguson, Nottingham	920	...
Marshall and Henderson, Newark	914	944
C. C. and A. Dennitt, Nottingham	890	850
Wilson and Ashton, Retford	847	870
James E. Hall, Nottingham	860	840

Alvaston.—The new church of Alvaston, re-opened on Wednesday week, consists of a nave of four bays, north and south aisles, chancel and vestry, with a tower at the west end, the principal entrance being by a porch on the south side. The walls are of Duffield stone, and the dressings of Sydnope: the walls in the interior are lined with Ashlar, boasted on the face, with Bath stone for the carvings. The building is in the Gothic style of fifteenth century, the chancel partaking of the style of the fourteenth. The roofs are formed with trussed principals, resting upon carved stone corbels, the timbers being chamfered, stained, and varnished, with open ends throughout. The entire width of nave and aisles, measured in the interior, is 48 feet, and the length from the west wall of the tower to the east end of the chancel, is 80 feet, the chancel being 20 feet. The tower rises to a height of over 60 feet, and has at each of its four angles a pinnacle surmounted with a gilt vane. In the old edifice there were 179 sittings: in the new one there are 379—199 free. The chancel is paved with Minton tiles. Mr. H. I. Stevens, of Derby, was the architect, and Mr. G. Thompson the contractor. The original contract was for 1,400*l.*; additions afterwards increasing it to 1,605*l.* 18s. 9d. exclusive of heating apparatus, &c.

Keighley.—The new Independent chapel at Keighley, erected from a design and under the superintendence of Mr. Simpson, of Leeds, was opened on the 25th ult.

Hawes and Sedbergh.—The foundation of a new Wesleyan chapel has been laid at Hawes. The cost of the erection will be about 500*l.* The chapel will seat 350 persons.

Armley.—The foundation-stone of a new Primitive Methodist chapel and school-room was laid on Saturday before last at Armley. The chapel will contain sittings for 300, and the school-room will accommodate 200 children.

Skipton.—It has been suggested that a subscription should be raised for the purpose of restoring the ancient parish church of Linton, which is in a somewhat dilapidated condition. It is estimated that 500*l.* would go a long way towards the restoration.

Bedlington.—A piece of land, six acres in extent, having been given by the Bishop of Durham for a new burial ground at Bedlington, a rate and subscription were entered into for funds to erect a chapel, at an estimated cost of 260*l.* and for fencing, draining, &c. in all about 1,000*l.* The ground was consecrated on the 1st inst.

Wigan.—A stained glass window has been placed in the parish church of Standish, by Mr. C. B. Clayton, of Adlington Hall, in memory of his only son, who fell before Sebastopol. The subjects are the baptism, crucifixion, and ascension of our Saviour.

Carlisle.—The United Presbyterian church, Fisher-street, Carlisle, according to the local *Journal*, was opened for public worship on Sunday before last. The new church occupies the site of the former structure. It is built of brick, with a front of Prudham stone. Above the entrance is a stained glass window, presented by a few friends, composed of one large and two small perpendicular lights. Surmounting this is a circular window with designs emblematical of the Trinity. There are two flights of stairs leading to the gallery, and lighted by a couple of windows of cathedral glass. The interior of the church is lighted principally from the south side and by three oblong windows at the east end. The flooring is of wood, and the pews of stained wood. The church is heated by means of hot water pipes. The ceiling is flat, and is divided into panels by the cross beams supporting the roof. Beneath is a school-room, capable of holding about 200 children, — the church itself being calculated to accommodate about 600 persons. The structure is from the design of Mr. Stewart, architect. Mr. T. Jones was the builder: Mr. David Hall executed the woodwork; Mr. Rowell the painting and glazing; Mr. Ormerod the plastering; and Mr. Thompson the plumbing and gas fittings. The estimated cost was 1,000*l.*

Glasgow.— St. Aloysius's Roman Catholic chapel at Springburn was opened on Sunday in week before last. The architect was Mr. Charles O'Neil.

Drogheda.—The consecration of Hackett's-cross church took place on Sunday before last, according to the local *Argus*. The church is situated in a small hamlet. In the vicinity are the remains of the ancient church of Clogher, and the ruins of Glasspistole castle, and almost within sight is the spot upon which St. Patrick is believed to have landed. The chapel, built by Mr. Murray, of Dundalk, is in the Early English style, having twelve lancet windows on its sides, and in the chancel a large window, filled with enamelled stained glass. The proportions are 110 feet by 34 feet. The interior of the roof is open: the roof timbers are ornamented with Gothic tracery—pendants between the rafters, and wood panels stained of an oak colour. The walls are built with a smooth and variegated stone like marble, obtained at Clogherhead.

WHITEWASH ON SLATE.—PAINTS.

A CORRESPONDENT of the *Builder* has lately inquired for "a method of fastening whitewash upon slate," the object being to lower the temperature of the roofing by causing the solar rays to be reflected from its surface. I think a modification of the "lacboracic paint," as noticed in your journal for September 29th, 1855, would meet all the requirements of the present case: however, as I am told that the number in question is now out of print, I beg leave to make a few extracts from my former article on behalf of your correspondent.

The "lacboracic paint" is made by "boiling together for half an hour—Commercial shell-lac, 1 lb.; ditto borax (Tincal), 1½ lb.; and water, 10 lbs.=1 imp. gal.; allowing the solution to stand until quite cold, and then straining through bags of some strong, coarse material. The solution thus prepared should be mixed with from 6 to 8 lbs. of finely-ground dry white-lead, and raised once more to the boiling-point, with constant agitation. When cool, it may be stowed away in casks or carboys (or any description of vessel which will perfectly exclude the air), and will be fit for use at any time, with the simple preparation of stirring it well up. . . . . The only rule necessary for lacboracic painting is,—give the paint a stir every time you put your brush into it. . . . . The residue of crystallized borax and undissolved shell-lac left in the straining-bag, if boiled again in a small quantity of water, may be treated and made use of in the same way as the former solution."

If your correspondent uses the brushes secured by twine and glue for the lacboracic paint, their speedy disintegration will be the consequence: he may prevent this by paying attention to the following paragraph, which I extract from my second article upon the subject (*Builder*, Oct. 18, 1855):—

"Pour a quart of boiling-water upon 1 oz. of powdered nut-galls, and, when cool, pour off the clear, supernatant liquid: soak the brushes in the same for forty-eight hours, at the expiration of which time the glue they are fastened with will be entirely converted into leather, and consequently they are then quite unalterable by either oil or water paints."

For your correspondent's present purpose white lead would, I presume, be too expensive; but as there are numerous other whites and lime compositions to be had at a cheaper rate, he may readily choose one for himself.* I should myself recommend sulphate of baryta (constant white), which is easily prepared from "heavy-spar," by first digesting the pulverized mineral in dilute sulphuric acid, and then washing and grinding it.

My late experiments lead me to infer that the best people to apply to for sulphate of baryta are the manufacturers of white lead, as the former article appears to be a constant component of the latter. I may mention here, that in a series of nine analyses of different samples of white lead, *all* contained sulphate of baryta, the amount of adulteration varying from about four to twenty-two per cent. of the whole (the samples being ground in oil). If I ever meet with a specimen of the pigment *quite pure*, which is extremely improbable, I shall certainly publish the seller's name and address. The samples above-named were all "of the finest quality," "warranted genuine," "pure," &c. &c.!

The effect of whitewash upon slates would undoubtedly be to retard the absorption of radiant heat; but should the sun's rays continue to bear upon the roof, and after a time render it hot, it would (on the removal of the source of heat) take a much longer time to cool than if the surface of the slating was in its normal state.

I make this remark without comment, as worthy of consideration by your correspondent.

WENTWORTH L. SCOTT.

HOUSES AND GARDENS FOR THE PEOPLE.

To you, sir, who have so warmly sympathised with the condition of the poor, and so ably advocated their cause, no apology, I am sure, will be required for requesting the admission into your valuable columns of the following remarks on a subject which I, too, have deeply at heart. The larger half of my life has now gone by, and fain, ere I visit the invisible land, would I discern some material token of amendment. Something might be done. Something I feel assured *ought* to be done, to benefit more effectively the condition of the multitude.

HENRY MCCORMAC, M.D.

A great work awaits society, if not in our own, at least in the coming generation. The construction and reconstruction of the dwellings of the people are most urgently required. Houses are not adapted for health, use, or cheerfulness, as they ought to be. The general deficiency is unspeakably great. Either there is no provision, or no adequate provision, for the admission of light, air, and effective sewerage. Health and cheerfulness are not sufficiently promoted. The renovation of the houses of the multitude is of instant necessity. The executive, suitably enlightened by architects, mechanists, and medical men, should constrain the erection of suitable abodes. The dwellings of the working classes, whether they be the worn-out residences of the opulent, or houses built on speculation, are bereft of almost every desirable

* Possibly common whiting, or even old plaster images ground very fine, would answer.

convenience and amenity. Insects, vermin, dirt, and foul air alike infest them. Yet health, cheerfulness, and grace, as far as possible, should characterise every human abode. These are desirable in the first instance, and they would be found cheaper in the end. Every house should afford the thoroughest access to light and air. No living-room, no sleeping-chamber should have a borrowed light or borrowed air. Each of these all-important requisites should be directly supplied from the great fountains of both.

Every house ought to stand a little above the general level of the soil. No foulness, no dampness, should find access from below. Every possible provision, and in every the humblest dwelling, should be made for subserving cleanliness, decency, and propriety. The conditions of our animal nature impose these requirements imperatively, short at least of the alternatives of discomfort and disease. Every house might be rendered fireproof. It will be said that no house can be rendered absolutely fireproof. Let houses, then, be rendered approximately so. That there are ways and means of accomplishing this, every builder, every architect, is well aware. It is an outrage on human nature to construct abodes unnecessarily liable to fire. There are certain family requirements which the very humblest structure should not be without. At the head of these, perhaps, are sufficient sleeping accommodations. Exclusive of the living-room, which, in the lowest class houses, must of necessity be "kitchen and parlour and hall," there are required absolutely, for each several family, *three* sleeping apartments, one for the parents, one for the sons, and one for the daughters. The great bulk of the population have only two rooms for every purpose; a cooking-room and a sleeping-room; no further accommodation, no farther privacy! Some have only *one* room for *every* purpose. It is a subject on which it is impossible to enlarge without being awakened to feelings of sorrow and indignation. *Every window in every room should be made to pull down.* The whole casement should be provided with a double frame, so as to open on one side, like a door on hinges, and so allow a pane to be set in, or the glass to be cleaned, without the necessity of mounting a ladder, or standing or sitting outside for the purpose. A large and costly establishment that I am acquainted with has been recently fitted up in such wise, that of a multitude of windows not one can be cleaned, nor can a pane be replaced, without rearing a ladder to the different stories, and in all weather, outside, for the purpose! The absurd, costly, and dangerous practice of puttying up panes and going outside to clean windows, should be put a stop to. A simple arrangement, intelligible to every one—stripes of Indian-rubber and slips of wood secured with brass screws—should be substituted for the former, while windows, at once to pull down and open as doors, as aforesaid, would do away with the necessity of the latter.

Every house, even of the very humblest class, should have a washing-room, where there might be a stone or wooden bath and a good large drying-closet. This I would manage by having the kitchen fireplace in the party-wall instead of in the end wall. It is quite obvious how there might be a large boiler to supply both kitchen and washhouse. A space, too, could be boxed off behind the fire for the drying-closet, with a wooden horse or two to slide in and out at pleasure. The Americans have constructed a capital washing-machine, which I have had copied. It consists of an oblong box, raised by supports at the ends, above the ground. There is a lever above, at a certain height, hinged to a support in the middle. At one end of the lever is placed an iron equipoise weight. About the middle half of the near end depends a swinging rack, to which, by a simple contrivance, are attached the soiled clothes. By means of the weighted lever the clothes are plunged up and down in the hot lye of the box or tub, floating in which 150 balls of fir-deal, each 2½ inches in diameter, effectively discharge the duties of the washerwoman's wrists and fingers. This machine can be made double or on any scale of magnitude. It can be worked by any description of power, and really, cheaply realises a great saving of labour. A wringing-machine, for which I would propose a simple screw-press, would farther aid the poor housekeeper, and assisted by her family, these or other simple machines, among which a mangle must not be forgotten, would enable her, without the risk and expense attendant upon leaving her own house, to procure a copious, almost daily, supply of clean linen, with what unspeakable comfort and advantage it is needless to insist upon. Of course, these little arrangements, so simple yet so important, would imply an ample supply of water at constant high pressure, gas where practicable, and good drainage. A cinder-riddle, too, might be made to work, without the nuisance of dust, in a covered recess, with a winch-handle, which should impart a hopper-motion. Farther, a knife and fork cleaner, and likewise a boot and shoe polisher. This last only implies a brush-covered cylinder, with raised sides, working by means of a winch-handle in a close box, the periphery being made to open, so as to introduce the boots and shoes. The inner side of the cylinder might be arranged to clean shoes. Similar machines, but on a larger scale, would effectually cleanse clothes and carpets, without the noise and dust which at present accompany that disagreeable process.

The proper arrangement of a house, then, comprising air, water, and sewerage details, even on the most moderate scale, would imply the co-operation of distinct orders of experience and talent, not to be met with in one person. First, we must have the tasteful architect to plan, and the skilful builder to execute. The machine-maker and the mechanic must apply, in well-devised domestic appliances, a little of that skill which now runs to waste, as it were, in a thousand directions, rarely of equal importance. Lastly, the physician should see that no injurious condition should be present, and that nothing calculated to promote health and cheerfulness should be absent. *No house should be built without the direction of an architect*, and yet how many esteem themselves competent to act as architects. The fact is, that the great majority of human abodes are constructed without any—or almost any—reference to architectural or mechanical skill, or medical control. Now, model dwellings would tend to obviate all this, and a class of such being once constructed, nothing would be easier than to compel their universal imitation in all newly-built houses, gradually superseding the wretched dwellings which almost everywhere cumber the soil.

To the foregoing I shall only add that every house—certainly every house in the country—should have a garden. But, as gardens in towns are only sometimes practicable, I would surround all towns, at a convenient distance, with gardens. It would prove, I am assured, an admirable investment for speculators, were a space of ground divided into rectangular portions of a rood or more, and intersected with avenues right and left, whence the different garden-plots could be visited. Each group of gardens should be suitably enclosed, with a gate-house at the entrance, where a gardener and his assistants should reside. There, for a moderate outlay, the renter could obtain the aid he might require. In Ireland and Scotland, and even the greater part of England, there is too little of all this. Yet the practice, or a similar one, obtains to a great extent in Germany, and nearer home—about the great town of Birmingham. Even on so moderate a scale, the pot-herbs, the fruit, and the flowers which the merest stripe of a garden should furnish, would prove the greatest solace to young and old. Such an arrangement would prove a real boon—not to say resource—to the heads of families in our great cities; workers, with their wives and families, now condemned, year after year, to close abodes and working-places, without any outlet, perhaps, except the muddy or dusty thoroughfares, or any out-door weekly solace, except the drinking-shop.

CRYSTAL PALACE.

CERAMIC COURT.

THE Ceramic Court which has been for some time in course of formation, in the Crystal Palace, at Sydenham, under the care of Mr. Thomas Battam, F.S.A. has been opened. It is on the garden side of the nave, and contains magnificent specimens of Sevres, Dresden, Chelsea, Worcester, and other manufactures, from some of the most eminent collections in this country, besides many fine works by the principal English manufacturers. We shall take an early opportunity to mention it at greater length.

CHURCH OF ST. GEORGE, BASSETERRE, ST. KITTS.

THE church of St. George has been twice laid in ruins, during the present century, by the violence of earthquakes and hurricanes. It has been resolved again to erect the church, and Mr. Slater, architect, of London, has prepared a design, which is now in course of execution, the work having been commenced in May, under the superintendence of Mr. Mathew, who went from England for the purpose as clerk of works. As the principal church of the island, it was required to be of considerable size and dignity, whilst the peculiar and violent natural influences to which it will be subject forbade enriched ornament or lofty proportions. Adapting to the circumstances the style of the fourteenth century in England, the walls are made very solid, with largely-projecting buttresses, massive stone columns, and a low pitched open timber roof, so framed as to support the walls in any vibration to which they may be subject. The windows are placed low for the admission of air, and are deeply recessed from the outside, so as to place them as much as possible in shadow. They are filled with lattice or jalousies, with the addition of outside shutters, necessary for protection against hurricanes. The plan is cruciform, consisting of a nave, 24 feet wide, with aisles each 16 feet 6 inches wide, and a low tower attached outside the south aisle. The chancel is a continuation of the nave, with an apsidal termination, and with aisles, the transepts having a slight projection. The total inside length is 135 feet; the breadth across the transepts, 86 feet. Accommodation is afforded for 1,200 persons on the floor. The chancel will be fitted for choral service: these fittings, as well as a peal of bells, and stained glass for the east windows, will be manufactured in England. The cost of the works, exclusive of these supplementary items, will be about 7,000*l.* which is provided for by an Act of the Legislative Council of the island.

ST. SAVIOUR'S, SOUTH HAMPSTEAD.

THE Church of St. Saviour, South Hampstead, was consecrated by the Bishop of Oxford (acting for the Bishop of London), on Monday last. The plan is cruciform, with shallow transepts and chancel aisles, in one of which latter the organ is placed. The style adopted is Early English, and the windows have plain lancet heads. The tower and spire are to be at the west end of the south aisle, but the tower is only carried up at present to the height of the aisle roof. The walls are faced externally with Kentish rag and Bath stone. The seats, which are open and low, are of stained deal, and the reading-desk, which stands in the chancel, facing south and west, is of oak. The pulpit stands against the south pier of chancel arch, and is richly carved. It is constructed of Caen stone, and is ornamented with figures of angels bearing scrolls, and with columns of red marble. The font is also of Caen stone, with Minton's encaustic tiles let into the sides. The reredos under the east window is elaborately carved: the centre is of Caen stone, divided into three deeply carved and recessed panels, containing respectively a cross and the letters alpha and omega on either side, on a background of fruit and foliage, carved from nature. On each side of the centre composition, the wall is lined with a bold diaper of terra cotta, by Blanchard, of Blackfriars-road. The east window is a triplet, and is filled with stained glass, by Lavers, of Southampton-street, Strand. The centre light contains the figure of Our Lord, with the inscription, "I am the resurrection and the life;" and in the two side lights are figures of Saint Peter and Saint Paul. The floor of the chancel is paved with Minton's encaustic tiles, and the altar, which is raised several steps, stands on a footpace. The chancel arch and chancel roof are embellished with colour, and round most of the arches texts are painted, some upon gold grounds. The architect is Mr. Edward M. Barry, and Messrs. Lucas (Brothers) were the contractors. The amount of their contract was 4,000*l.* exclusive of foundations, pulpit, font, reredos, and decoration. The pulpit and reredos were carved by Earp, of Westminster-road, and the font and tile work were executed by Field, of Parliament-street. The church will accommodate 730 persons.

INFORMATION UNDER THE METROPOLITAN LOCAL MANAGEMENT ACT.

MR. LE NEAL, a licensed victualler, landlord of the Earl Grey, on the south side of the Mile-end-road, appeared before Mr. Yardley, at the Thames Police Court, on the 8th, to a summons, in which he was charged with having erected a building, booth, or shed, projection, or obstruction, in front of his house, which was an annoyance and nuisance to the neighbourhood, and rendered the passage or thoroughfare along the road less commodious; and whereas, notwithstanding a notice was given to him to remove or alter the same within fourteen days, the same continued a nuisance and an annoyance to the neighbourhood.

Mr. Huddleston stated, on the part of the vestry of Mile-end Old Town, that the summons was issued in conformity with the 119th section of the Metropolitan Local Management Act, and that the complaint against the defendant arose in consequence of a booth, or covered shed, being erected in front of the house, the effect of which was to cause the thoroughfare, as implied by the Act, to be less commodious, while, in consequence of the number of persons assembling in it, a considerable annoyance was caused to the neighbourhood, and the inhabitants made complaints of the nuisance. The defendant had received due notice from the vestry to remove the shed within 14 days, and not having done so, he was liable to a penalty of 5*l.*

Mr. Yardley.—Is it a question that the booth as an obstruction is on a part of the highway?

Mr. Huddleston.—I will be able to show that this is a portion of the highway.

Mr. Yardley observed, that supposing this to be a question of highway or not highway, he thought he

was not a proper tribunal to adjudicate on it, and that it ought to be taken to a superior Court.

Mr. Robinson, for defendant, said that the path on which the shed was erected belonged to the lord of the manor.

Mr. Huddleston remarked, that he would be able to show that the parish had repaired the path in question for years.

Mr. Yardley urged the learned counsel to refer a case of so much importance to another Court, and said that in order to give time for considering whether they would adopt that course, he would adjourn the case for a month.

This was agreed to.

MIDDLESEX INDUSTRIAL SCHOOLS COMPETITION.

It is, I believe, at last settled to which designs the premiums offered by the committee for the Middlesex Industrial Schools shall be given. I write to express a hope that, following the excellent example in the case of the late barracks' competition, the designs will be thrown open for public exhibition before they are sent back to the competing architects. If such exhibitions are of value to the public at large, and especially that portion of the public connected with institutions similar to the one about to be erected, much more are they advantageous to architects and the students of architecture; and it is on this ground that it is hoped, by other architects who competed as well as by myself, that you will use the influence of your journal to procure us this public benefit. FABER.

Miscellanea.

GAS-FITTERS' ASSOCIATION.—On Monday the annual dinner of the Gas Fitters' Mutual Association was held at the Plough, Blackwall. The President, Dr. Bachhoffner, in proposing success to the association, regretted that it had not met with that support the object merited, both for themselves as craftsmen, and for the public at large. He supposed he was expecting too much for a society yet in its juvenescence: he would, nevertheless, urge on them the need for their increasing their exertions, more especially with reference to supplying the want there was for a *locale*,—museum he would scarcely designate it,—where should be gathered models or specimens of such matters as are in present use, and of those each day added as science advanced. Many promises of assistance had been made extraneously, and it only remained with the association to make these promises fulfilments. Mention was also made of various lectures delivered during the last session, those by Mr. Lewis Thompson, Mr. Burnell, and Mr. Wright being more particularly alluded to. The value of a museum as proposed by the learned Doctor cannot be too strongly pressed; but it must be extended to something beyond simply the practical. Art must not be overlooked, there being, indeed, a very wide field open for improvement, if we bear in mind the tasteless fittings we see daily perpetrated.

THE FALL IN BIRKENHEAD.—We last week noticed the fall of a large hotel in Conway-street, and said it was from the foundation being bad, but we have since been informed that it was from the centres of the arches which were turned over the cellars being struck too soon, causing them to fall in, thereby bringing down that portion of the hotel over the large windows, as there were but brick piers at intervals, and the sudden fall of the cellar arch knocked them from their perpendicular: the remainder of the hotel where the outer walls were solid, was not at all shaken. The damage has since been repaired, but the arches have been dispensed with, and joists put in their stead. Mr. George Lacey is the builder and owner.

COST OF "REPAIRS" AT MELBOURNE.—The Melbourne people have been a good deal scandalized by the discovery that 29,183*l.* have been spent in "altering and repairing" the governor's residence at Toorak —a country mansion held on a five-years' lease! Some of the items seem monstrous, even for a gold country; 450*l.* for poultry-houses, and 181*l.* for repairing pigsties.

HOLBORN-HILL.—Your correspondent, "A Time-saver," has only suggested the project which I originated nearly twenty-eight years ago, as you will see by the accompanying lithograph. It was the last of three different designs, on which, above 8 feet long, and the detailed estimates, I expended much time and money, without any remuneration. An objection was at that time made to the authorizing of a company to take toll in the City, or I was prepared with a party who would have carried it into effect. As the houses proposed to be removed have been, I believe, since taken down, the estimated cost would be reduced, which might obtain for it more favourable reception.—T. F. TAYLOR.

THE GREAT PUBLIC WORKS IN THE BAY OF BENGAL.—The immense works begun in 1848 have been pushed forward with great vigour. An enormous dam has been carried across the Delta; seven navigable channels connect the weir with the coast; immense drains diminish the risk of inundation; eighty miles of embankments restrain the river in its proper bed; a safe harbour is being constructed; and several thousand men are now employed in improving the navigation of the Upper Godavery, and in opening a communication with the sea for 10,000,000 of people. These great results have been obtained at a comparatively small cost. The actual expenditure up to 1853 was only 180,000*l.* producing an increased revenue of 60,000*l.* or an annual profit of 33 per cent. Before the improvements of the Delta are completed, double that sum will no doubt be expended, and the investment will prove still more lucrative. It is to the Madras government the Indian public are indebted for these vast improvements. Colonel Arthur Cotton, late chief engineer of the Madras presidency, planned the works, which are certainly not very consistent with the stereotyped charge of neglect and do-nothing policy so frequently made as to our Indian affairs.

NEW DESCRIPTION OF KILN. — A new kind of kiln for drying grain, in which propulsion by machinery is a main feature, is said to have been invented by a Mr. Macdonald, of Portsoy. The *Banffshire Journal*, in describing a working model of the machine, says "it consists of a series of cylinders placed horizontally in a square funnel or shaft, heated by means of flues. . . . The grain is fed from a hopper through a feed-pipe into the end of the uppermost cylinder. The first screw, having a rotatory motion, takes the grain from the feed-pipe, and forces it along to the opposite end, where it falls through the connecting pipe, and enters the second cylinder, the spiral of which, revolving the contrary way, takes it back to the opposite end, or perpendicular to where it first entered, and so on through all the series, each successive spiral revolving the contrary way until the grain is delivered from the last through a spout into a hopper or couch prepared for its reception." The improvements achieved by this machine are said to consist of the exclusion of all smoke from the grain, a reduction in manual labour, a saving of fuel, and an increased power of drying.

THE FILTHIEST CITY ON THE FACE OF THE EARTH.—At a meeting of the Police Committee of Glasgow, on Monday, says last week's *Scotsman*, Councillor Moir read a letter from one of the members of the British Association in regard to the sanitary condition of Glasgow. The learned gentleman, who had been in Glasgow during the recent meeting of the association, stated that he was a foreigner and a traveller, and that he had been in almost every city in the habitable globe, but had seen none that could equal the metropolis of the west in filthiness.

STATISTICS OF COPPER, ZINC, AND LEAD. — A return, just obtained by order of Parliament, states that the copper ore imported last year amounted to 58,089 tons, and the regulus to 8,510 tons; while of unwrought copper in bricks, pigs, &c. there were imported 3,624 tons; of old copper fit for remanufacture, 1,168 tons; partly wrought, in bars, rods, &c. 4,419 tons; plates and coins, 269 tons; and copper manufactures and copper plates engraved, 513 tons. Of those countries which exported copper ore, the largest quantity, 22,425 tons, came from Cuba; from Chili, 11,845 tons; the United States, 5,139 tons; Spain, 3,773 tons; South Australia, 2,966 tons; Bolivia, 2,280 tons; British possessions (South Africa), 1,543 tons; Algeria, 1,207 tons; British North America, 1,078 tons; British West Indies and Guinea, 1,009 tons; Peru, 1,117 tons; France, 838 tons; Italy, 755 tons. The largest importation of regulus was from Chili—viz. 7,039 tons; from France, 673 tons; Norway, 367 tons; Holland, 271 tons. The exports of copper from the United Kingdom during the year 1855, was as follows:—Copper, 27 tons 10 cwt.; unwrought, 5,119 tons; coin, 6 tons 7 cwt.; sheets, nails, &c. 10,432 tons; wire, 16 tons 4 cwt.; other wrought copper, 1,084 tons. The foreign copper exported from the United Kingdom consisted, of unwrought 671 tons; part wrought, 278 tons; plates and coin, 93 tons. The imports of zinc amounted to 17,852 tons, and the exports to 2,516 tons of British and 2,636 tons of foreign. The lead (pig and sheet) imported in 1855, amounted to 7,246 tons, and the lead ore, 742 tons. The principal quantity of the lead imported (pig and sheet), came from Spain, amounting to 6,996 tons; and 371 tons of lead ore were imported from France. The British lead ore exported during the year 1855, consisted of 564 tons; pig and rolled lead, 20,466 tons; shot, 1,681 tons. Of the British lead ore exported, France took 463 tons; of pig and rolled lead there were sent to the United States, 9,264 tons; France, 4,359 tons; China, 1,993 tons; and Australia, 1,078 tons.

THE SHIPWRIGHTS' STRIKE AT MESSRS. YOUNG AND MAGNAY'S.—The workmen employed by Messrs. Young, Son, and Magnay, instead of those connected with the Shipwrights' Union, who struck work on the lunch question, are shamefully tampered with, harassed, and intimidated by those connected with the union, who seem to constitute a conspiracy to prevent fellow-workmen from earning a livelihood, much rather than a union for behoof of workmen. The employers have been compelled to take out warrants against workmen who have contracted with them but have fled from their work under the malign influence of these conspirators; and although pardoned after being sentenced to three months' imprisonment, with hard labour, not a few of them, after promising to return to their work, have still failed to do so, and now it comes to be a question whether the law or the union is the strongest. "Our yard," says Mr. Magnay, "is like a beleagured fortress. Men are constantly watching from a publichouse window all that is going on within: there are spies and scouts at the corner of every street near the yard: the men we engage in the country are intercepted at the railway stations; and we believe intimidation has been practised. There are plenty of men anxious to work for us, but they are prevented doing so by a tyrannical and inquisitorial tribunal which interferes with the freedom of labour, and has agents all over the kingdom."

CHURCHES STRUCK BY LIGHTNING. — Clapton Chapel was struck by lightning on Friday in week before last. One of the pinnacles of the building was broken, and large stones were dislodged, some falling on the roof, others upon the ground. The damage done is considerable. The chapel and the adjoining school-rooms were erected within the last four years at a cost of nearly 10,000*l.*——During the same thunder storm the parish church of Addlethorpe (Alford) was struck by lightning. A fire-ball appeared, says the *Lincolnshire Chronicle*, to come through the roof, and it exploded with a terrific report a few feet above the floor, about half-way between the reading-desk (where the Rev. E. H. Edman was at the time) and the west end of the church, leaving a strong sulphurous smell after it. Almost immediately after, the part of the roof on the north side of the nave, adjoining the tower, fell in with a tremendous crash, breaking through the seats below amid a cloud of dust. When thinking it safe to move, Mr. Edman went out, and, on reaching the porch door, he found a lamb lying dead against it, and a sheep also close by. The north-east pinnacle of the church had been struck by the lightning, the fall of which, together with the stonework at that corner as far as the moulding, had brought down that portion of the roof into the church. The porch door was splintered in several parts, and several other parts of the church were injured.

MONUMENTS.—A great open-air meeting has been held in the King's-park, Stirling, for the purpose of taking measures to raise a national monument to the memory of Sir William Wallace, to be erected on the summit of the Abbey Craig, near that city. Business was entirely suspended in Stirling on the occasion, and at least 10,000 persons were present in the park. The Earl of Elgin went down from London by express for the purpose of presiding at the meeting. The resolution proposed was unanimously carried. The design for the monument is to be submitted to public competition among native artists.——It is proposed to erect a monument to the late Sir Henry Bishop, over his grave, in the Finchley cemetery. A meeting was held, at the rooms of the Harmonic Society, Exeter Hall, last week, and was very numerously attended. Resolutions in favour of the object of the meeting were passed *nem. con.* and a subscription list opened. ——The proposal to erect a monument to Franklin at Lincoln, as a suitable site, has called forth a reply from Spilsby, in which it is stated that Spilsby, being the place of his birth, has prior claims to be the site of the proposed monument.

WILTS ARCHÆOLOGICAL SOCIETY.—It is intended to hold the next annual meeting of this society at Warminster, on Tuesday and Wednesday, the 5th and 6th August next. The Marquis of Bath has accepted the presidency of the meeting, and will throw open Longleat House and grounds to members of the society.

BATHS IN LONDON.—I cannot say much for the pluck of the Londoners in allowing such large places as the City, Islington, and Clerkenwell to be without public baths and libraries, when comparatively small country towns have adopted them long since. Men connected with the City leave tens and hundreds of thousands: how small a portion of their hoards would give an impetus to raise the necessary means to make thousands more cleanly and enlightened. 10,000*l.* as the corner-stone of a subscription for baths and libraries, with the addition of other benefactions and a small rate, would effect the object without impoverishing the next heirs.—G. H.

THE PROJECTED SUEZ SHIP CANAL.—The European Commission of Engineers assembled the week before last in Paris, to discuss the details of the plan for cutting a canal across the Isthmus of Suez, and have brought their labours to a close. The following is a summary of the resolutions agreed upon at the various sittings:—The commission have adopted the principle of a direct cutting from Suez to the Mediterranean. They have rejected the system of supplying the maritime canal from the fresh water of the Nile, and have adopted that which supplies it with sea water. At the close of their discussion, it was decided that the canal should not be embanked in its passage across the bitter lakes. As regards the port of Suez, on the Red Sea, the commission adopt the situation and direction given to the channel. A port for taking in stores, refitting, and repairing, will be created in Lake Meuzaleh.

THE STRIKE AT PEMBROKE DOCKYARD.—The strike of the masons employed by the contractors on the extensive works in progress at the royal dockyard at Pembroke has, to a certain extent, been broken up. The contractors, Messrs. Smith and Tregenna, have brought round from Dublin a body of 200 men, in order to supplant those who held out; and of this body a large number went to work. Some of the older hands also joined, so that the works have been fully resumed.

THE HEREFORD WATERWORKS.—The waterworks at Broomy-hill, under Mr. Moxon, the contractor, are very nearly completed. The engine-house, with its necessary appurtenances, is situated at the foot of the hill, and distant about 100 yards from the river. The engine is from the manufactory of Messrs. Simpson and Co. of London. It is on the beam principle, condensing, and working the steam expansively. It is capable of pumping 40,000 gallons of water per hour, raising it 103 feet high, through a 10-inch rising main, 500 feet long. The outlet of the rising main is brought up to the centre of the reservoir, 2 feet 6 inches above the top-water level. On the lower side of the reservoir—the capacity of which is 4,126,000 gallons—are the two filtering beds, situate 13 feet below its level. In the centre of each filter-bed is a square pedestal, surmounted by a vase, 4 feet high, through which an ornamental jet will play. The sewerage drains will be flushed with water from the reservoir, and the filtered water be preserved entirely for domestic purposes.

IMPROVEMENT IN IRON HOUSES.—Mr. W. Clarke, of Kingsland, has recently patented an improvement in the construction of iron houses, consisting of a malleable iron joint. Its principal value is held to consist in the facility for removing iron houses, as it can be adopted by persons unskilled in mechanical craft.

STREET WATERING AND FIRES.—A recent article in your valuable paper on "Street Watering," &c. recommending the use of "hydrants" in lieu of pumps, recalls to my memory an old idea of mine, conceived in 1847, on the occasion of seeing a turn-cock's arm broken at the corner of Cheapside, while turning on the main, which happens to be fixed in the centre of the road, opposite Allan, Badger, and Co.'s warehouse, near the General Post Office. I propose a hydrant, consisting of a lamp-post (with lamp fitted with coloured star in each side, so as to show by night); the base to contain a pipe, with nozzle from main; on the top of which, in a flat cast-iron tube, similar to that used for electric telegraph street wires, I run an endless chain, going round a wheel or pully on main, to turn on and off supply, either by butterfly or sliding valve, similar to a dock-gate valve: the chain goes up base of post, and round a smaller pulley, which would be fixed about the height of a yard from surface of pavement, so that the turncock would only have to insert a handle, a few turns of which open or close the mains. The hydrant would have a different shaped plug or tap, so that there need be no mistake. I think my plan offers the following among other advantages, viz. there is no iron plug-hole in the roadway, making uneven wear of paving, no unsightly "F. P. 14 ft." on Brown, Jones, or Robinson's house; no danger to turncock; no delay in cleaning out plug-holes, or in finding them at night when wanted, as the coloured lamp would indicate their situation. I have tried the experiment of what power it would require to work a valve on my plan, and find that with a pulley (working screw to raise valve in main), of 2 feet diameter, geared by chain, with one about 3 or 4 inches in post, a leverage of 2 feet would be amply sufficient. One experiment was tried with valve, at 70 feet distance, much farther than would usually be found, and with more turns and bends than could possibly accrue. There would be a considerable saving of weight for the turncock to carry, as he would only require one instrument (which need not weigh so much as the key), instead of the three he is now burdened with.—G. H. S.

COMPETITION.—With a view to the improvement of the Royal Hotel, Mall, Clifton, Bristol, various architects having been invited to compete anonymously for the commission, six plans were sent in,—to three of which premiums of twenty, fifteen, and ten guineas were awarded. The successful candidates were Mr. J. H. Hirst, Mr. S. B. Gabriel, and Messrs. Pope, Bindon, and Clark. After some consideration, the committee, on the recommendation of Mr. Medland, architect, of Gloucester, who was called in professionally to advise on the decision, determined upon the adoption of Mr. Hirst's design, as more in accordance with the conditions of the scheme they had submitted to the different architects.

THE CAVALIERE CANINA, the celebrated antiquary and architect, of Rome, has just arrived in London. He is on his way to Alnwick Castle, to direct, with Mr. Salvin, some of the decorations of the ceilings and other parts, which the Duke of Northumberland desires to be executed in the grand style of the Roman palaces. The Cavaliere is an honorary and corresponding member of the Royal Institute of British Architects.

REPORT ON NEWPORT DRAINAGE.—A report on the general drainage of Newport, Monmouthshire, has been prepared by Mr. Alfred Williams, C.E. in a printed form. The reporter states that the sewage of two-thirds of the borough may, by the proposed works, be brought to the Pillgwenlly outlet, and nearly all the remainder to same outlet by a further expenditure. No flushing will be required. The scheme contemplates about seven miles of new brick sewers, &c. the sewers varying in height from 14 inches to 4 feet 6 inches; all above 14 inches being egg-shaped, and the materials of the whole, radiating bricks, laid in mortar, with some in cement. The cost of new sewers, &c. and repairing old, is estimated at 13,000*l*. The number of houses in the borough is about 3,400, so that the average cost of the works would be about 3*l*. 16s. per house. The cost of sewers proposed to be made on lands not yet built on is estimated at 3,000*l*.

ROMAN CATHOLIC CATHEDRAL IN SOUTH AUSTRALIA.—The foundation-stone of the intended new Catholic Church of St. Francis Xavier, in Victoria-square, Adelaide, was laid on Monday, March 17. The day being the anniversary of Ireland's patron saint (St. Patrick), there was a large attendance to witness the ceremony.—*Australian and New Zealand Gazette.*

ANCIENT WELL DISCOVERED AT UTTOXETER.—As a party of workmen were engaged a few days since in digging the foundation for a new house in connection with a shop, in the Market-place, they discovered, underground, a curious old stone well, arched over, and about ten yards deep. The stones, of which it is built throughout, are worn away by the trickling of the water, and it is of very ancient, if not, as supposed, of Roman origin; but the Goths and Vandals of the place have filled it up with soil.

TENDERS

Delivered to the Guardians, Mint-street, Southwark, for industrial schools for the parish of St. George the Martyr, to be built at Mitcham:—

	Main Building.	Infirmary.	Porter's Lodge, &c.	Total.
	£.	£.	£.	£.
Humphreys	10,162	1,950	867	12,979
Taylor and Buckley	9,900	1,672	741	12,313
Pollock and Co.	9,723	1,639	617	11,979
Day and Co.	9,649	1,822	790	12,262
Tarrant	9,393	1,660	736	11,789
Myers	9,360	1,736	752	11,847
Hack and Son	9,237	1,697	737	11,671
Moxland	9,200	1,700	760	11,660
Rudkin	9,190	1,750	700	11,485

Thompson	8,660	1,600	690	10,950
Adamson and Sons	8,598	1,713	721	11,032
J. Wilson	8,331	1,528	680	10,539

For erecting five houses, Orford-place, Hackney-road, for Mr. James. Mr. H. J. Hammon, architect:—

Brown	£2,737	0	0
Munday	2,610	0	0
Vinlow	2,599	0	0
Hopkins and Roberts	2,454	0	0
Dove, Brothers	2,446	0	0
Axford and Hall	2,322	0	0
Carter	2,174	0	0
Hocken	2,150	0	0
Nagol	2,150	0	0
Tarrant	2,136	0	0
Johnstone	2,019	0	0
Mears	1,973	0	0

For church in the Westminster-road. Mr. W. Rogers architect. Quantities supplied by Mr. Jarvis:—

Taylor and Buckley	£8,990	0	0
Gammon	8,750	0	0
W. Higgs	8,620	0	0
Lucas	8,322	0	0
Cubitt and Co.	8,290	0	0
Macey	8,140	0	0
Patrick and Son	7,944	0	0
Myers	7,683	0	0

For a new house in Cornhill, for the English, Scottish, and Australian Chartered Bank. Portland stone and part polished granite front. Mr. Henry Baker, of Upper Gower-street, architect:—

Ashby and Sons	£5,359	0	0
Cubitt and Co.	5,349	0	0
Lawrence and Son	5,299	0	0
Young	5,197	0	0
Batterbury	5,180	0	0
Mansfield and Son	4,950	0	0
Piper and Son	4,866	0	0

For eight houses, Islington. Mr. W. Rogers, architect:—

Hill	£2,835	0	0
Taylor	2,649	0	0
Gammon	2,561	0	0

For rebuilding two houses at Rufford's-buildings, Islington. Mr. Leicester, architect. Quantities supplied:—

Mansfield and Son	£1,375	0	0
Hill	1,297	0	0
East	1,297	0	0
Willson	1,237	0	0
Coleman	1,192	0	0
Fowler (accepted)	1,113	0	0

For erecting part of the carcase of a mansion at St. John's-wood. Mr. Joseph Springbett, architect:—

Unwin	£2,613	0	0
Holland and Co.	2,565	0	0
Hebb	2,475	0	0
Higgs	2,230	0	0
Clemence	2,204	0	0
Browne and Co.	2,112	0	0

TO CORRESPONDENTS.

Churches struck by Lightning.—The *Builder* almost every summer has recorded such cases; but dates would require a special reference.

Spring and Thames Water. Lime water is perhaps the best agent for softening spring water containing lime, which it precipitates by depriving it of carbonic acid. Thames water would require filtration through charcoal or other cleansing process, to render it fit to drink. The *Builder* has often treated of modes of softening and cleansing water, and to it we must make general reference.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

GERISH'S PATENT HARDENED PIVOT STRAP HINGE.

Suitable for Gates, Doors, &c. &c.

Architects, Builders, and the Trade in general, will find this a superior article, both in quality and cheapness, to any hitherto offered to the public, carrying the heaviest weight with the greatest ease, and working on a hardened pivot renders it most durable. The Hinges are made from 6 inches to 40 inches long, and in every variety of pattern.—Lists of Prices may be had of the Patentee and Manufacturer, F. W. GERISH, East-road, City-road, London, and of all Factors and Ironmongers in the United Kingdom.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges and spring gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees sugar-mills, &c.

TO ARCHITECTS, &c.—The IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most efficient yet invented, is made by T. SMITH, of 14, Queen street, Oxford-street, near Argyll-street, where a working model can be seen or will be sent for inspection on the shortest notice.
N.B.—Espagnolette Bolts of a superior quality, at reduced prices.

IRON CHURCHES, STORES, &c.—For SALE, Substantial Corrugated Iron Stores, Churches, Dwelling-houses, and every description of Buildings, adapted to all climates. Iron Roofs constructed for all parts of the world. An Iron Church with sittings for 750 people, for hire or sale.—To view and for further particulars apply to SAMUEL HEMMING, Clift House Works, Bow, London.

CIRCULAR SAWS, by small Steam-power, WANTED, with boxes complete, in good condition, stating price, and where it can be seen.—Apply, by letter, to Y. Z. Mr. Jean's, High-street, St. John's-wood.

TO IRONMONGERS, BUILDERS, &c. PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

A WROUGHT-IRON TANK FOR SALE, in very good condition, 20 feet long, 8 feet wide, 1 foot deep. Apply at 17, Greek street, Soho.

TELL-TALE TABLE.—WANTED to purchase a Tell-tale Table for a Garden-gate.—Apply to Messrs. ROGERS and AYLING, Tivoli Gardens, Preston, near Brighton.

Third Edition.

THE BUILDER'S FRIEND,

Price One Shilling.

Office of "The Builder," and of all Booksellers.

HAND-RAILING SIMPLIFIED, upon entirely new and original principles,

By HOLTE RUDDER.

TRUBNER and CO. 12, Paternoster-row, Publishers, price 2s6.

The system laid down has been thoroughly tested by some of the first talent in London, and pronounced to be the most simple and only reliable guide that has ever appeared on the subject of hand-railing.

On the 18th July, price 8s. 6d. cloth, the

THIRTEENTH VOLUME of HOUSEHOLD WORDS, conducted by CHARLES DICKENS.

Complete Sets of "Household Words" may always be had, either in Weekly Numbers, Monthly Parts, or in Half-yearly cloth Volumes.

Office, 16, Wellington-street North. Sold by all Booksellers.

TO PARENTS AND GUARDIANS.

TO BUILDERS AND CONTRACTORS.

THE Advertiser is in WANT of a RE-ENGAGEMENT as GENERAL FOREMAN; is a thoroughly practical man, with unexceptionable testimonials.—Address, HUGH FACY, 19, Clayton-street, Caledonian-road, Islington.

TEMPORARY ASSISTANCE.—The Advertiser, who is known to many architects in London, is in the habit of rendering occasional assistance on Gothic and other general work, either by preparing working drawings at his own office, or by attending out for short periods.—Address, A. B. care of Messrs. Soyer and Co. 112, High Holborn.

THE Advertiser, a good CARPENTER, and also having a thorough understanding of gas-fittings, wishes for a SITUATION, either in London, or to go abroad. Has lately returned from Turkey, and has a smattering knowledge of the Turkish language.—Address, Q care of O. J. 80, Charing-cross.

TO BUILDERS.

A PRACTICAL MAN, just finishing up a job, will be glad to CONTRACT for any quantities of PLUMBING or PAINTING, in town or country.—Address, A. W. Mr. King's, 16, Charles-street, Manchester-square.

WANTED, by an experienced JOINER, a RE-ENGAGEMENT as WORKING SHOP FOREMAN, where from fifteen to twenty journeymen are usually kept.—Address, T. L. 57, Dougla-street, Deptford.

A BUILDER, Auctioneer, and Undertaker, residing a short distance west of London, through advancing years and ill health, is compelled to offer for DISPOSAL an old-established BUSINESS in the above branches, with a convenient dwelling-house and well arranged workshops, sheds, outbuildings, and yard.—Full particulars may be known by personal application to Mr. GLASHER, Furnishing Undertaker, 193, Tottenham-court-road.

AN experienced Carpenter and Fitter is in WANT of a SITUATION as FOREMAN, or to take the entire charge of a job; has filled similar situations, and can give good references as to ability. &c.—Address, G. K. 56, Shepperton-cottages, Rosemary-branch Bridge, Hoxton.

TO LAND AND ENGINEERING SURVEYORS.

A YOUNG GENTLEMAN, practically conversant with his profession, is requiring a RE-ENGAGEMENT as MANAGING SURVEYOR, or with the view of a future partnership, with a party possessing an established and respectable practice. The advertiser, since the completion of his articles of clerkship, which took place four years ago, has been engaged on extensive town and parish surveys, and can command testimonials of integrity and ability. Salary is not a primary consideration.—Address, C. E. Post-office, Bradford, Wiltshire.

TO BUILDERS.

A RESPECTABLE Young Man, 24, is desirous of ENGAGING himself to a Builder as CLERK and MANAGER, with a view to Partnership. He has a good private connection, and considerable experience in all branches of the trade, having served his time to the carpentering; and carried on a large business for four years on his own account. Can prepare plans, working and detail drawings, take out quantities, and estimate; book-keeping, &c.—Address Z. W.K., Deacon's Newsrooms, Leadenhall-street.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, who has had ten years' experience in the Offices of Architects and Surveyors of extensive practice, wishes for a RE-ENGAGEMENT, in town or country. Unexceptionable testimonials as to ability and moral character.—Address, R. A. Post-office, Worcester.

TO ARCHITECTS AND BUILDERS.

AS FOREMAN or CLERK of WORKS.—The Advertiser, a thorough practical man, is desirous of a RE-ENGAGEMENT. Has had great experience in Gothic work, and has no objection to the country.—Address, F. G. 8, Peutonplace, Pentonville

---

TO ARCHITECTS, BUILDERS, AND CONTRACTORS, &c.

A THOROUGH practical, energetic Man, who is a good draughtsman, can measure, &c. has first-rate testimonials, requires a SITUATION as CLERK of WORKS, or General or Shop Foreman to a Builder or Contractor.—Address BETA, 4, Robert street, Hoxton.

N.B.—Country not objected to, or to go abroad.

TO ARCHITECTS, ENGINEERS, &c.

AS CLERK of WORKS.—A respectable Man of much experience wishes for an ENGAGEMENT. Can give satisfactory references.—Address to M. A. N. Essex Coffeehouse, 98, Blackfriars-road.

TO ARCHITECTS.

A GENTLEMAN wishes to meet with an ENGAGEMENT. He is competent to design and prepare finished, perspective, and detail drawings. Would have no objection to assist architects temporarily, or accept an engagement for two or three days a week. First-class references in town and country.—Address, J. F. G. 58, Amwell-street, Middleton-square Pentonville, London.

TO ARCHITECTS.

A DRAUGHTSMAN, competent to prepare designs, perspective, finished, working, and detailed drawings, is open to a RE-ENGAGEMENT. No objection to assist architects in temporarily, but a permanency preferred. Good references. Salary, 2l. 2s. per week.—Address, R. T. C. 1, New Chapel-place, Kentish-town.

A FIRM doing a Wholesale Business with House and Ship Builders, Engineers, &c. &c. having an office in the City, is desirous to obtain an AGENCY from a Manufacturer of standing, whose business lies amongst the same class of consumers.—Address, A. B. at Messrs. Reece, Wilkins, and Blyth, Solicitors, 10, St. Swithin's-lane, London.

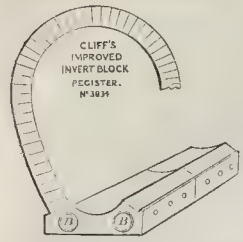
A PARTNER WANTED, in a first-class STOVE-GRATE and FURNISHING IRONMONGERY BUSINESS, at the west-end end of London, established UPWARDS of THIRTY YEARS. An energetic and practical man, of business habits, accustomed to the trade, and having had the control of workmen, possessing a moderate capital of not less than 2,000l. would find it an advantageous opportunity of establishing himself, as the proprietor is desirous of meeting with a partner who may be enabled to carry the business forward on his own account in a few years. Letters (from principals only), stating where engaged, and how long, with such other information as may enable the advertiser to form some opinion as to the energy and ability of the applicant, may be addressed to X. Y. Z. care of J. B. Watson, esq. 9, Nottingham-place, New-road.

ARCHITECTURAL and SURVEYING PRACTICE TO BE DISPOSED OF, on moderate terms, an old-established PRACTICE in the South of England.—Address ALPHA, 2, Murray-street, New North-road, Hoxton.

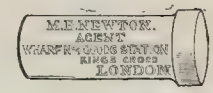
FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

FREEHOLD GROUND, CHANCERY-LANE.—The Commissioners of Sewers of the City of London hereby give Notice, that they will MEET in the GUILDHALL of the said City, on TUESDAY, the 22nd of JULY next, at TWELVE at Noon precisely, to receive PROPOSALS for taking on BUILDING LEASE for EIGHTY YEARS, at a ground rent, certain PLOTS of GROUND, situate on the west side of Chancery lane, and near Fleet-street. Further particulars may be had, and plan seen, on application to Mr. HAYWOOD, Engineer to the Commission, at their Offices in the Guildhall, where forms of proposal may also be obtained. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for their approval, and do not bind themselves to accept any proposal unless deemed advantageous. Persons offering proposals must attend on the advertised day, and the party whose proposal is accepted will be required to execute an agreement at the time.

JOSEPH DAW, Principal Clerk.



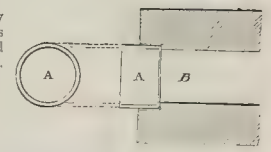
Sewers Offices, Guildhall, June 3, 1856.



TO POTTERS, BRICK-MAKERS, and OTHERS.—TO BE LET, ELEVEN ACRES of LAND, containing pipe-clay, brick-earth, fire-clay, and fine sand, situate in a very desirable part of Hants, within a short distance of the most important commercial towns. The whole of the buildings, machinery, plant, and advantages to be Let, on moderate terms, or taken at a fair valuation.—For further particulars, apply to Mr. S. BROAD, 55, Above-bar, Southampton.

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, land tax redeemed.—TO BE LET, upon building leases, for ninety-nine years, desirable BUILDING SITES upon the above Estate. The continual demand for houses in this locality, and the picturesque position of the property, adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For plans and terms apply to the Secretary of the Orphan Working School, 23, Ludgate hill; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WEHNERT and ASHDOWN, 2, Charing-cross; or at the Lodge attached to the School

THE ORIGINAL WORTLEY FIRE-BRICK, GAS-RETORT, and SANITARY TUBE-WORKS.



ESTABLISHED 1795.

BY USE OF CLIFF'S IMPROVED INVERT

The uniform level of sewer is easier of attainment; greater rigidity is insured by the joints A A; the work is executed with more speed; the notched sides insure better support for the bricks; while the subsoil is more perfectly drained through the lateral apertures ° ° ° in connection with the down thoronghfares B B.

Mode of jointing with ring A as set.

NOTICE.—TO BUILDERS, MASONS, AND THE TRADE.

GREEN MOOR STONE WHARF, 42, Bankside, Southwark,

late in the occupation of

Messrs. George Brown and William Rushe, who have discontinued the business, and it will in future be carried on by

BROWN, BOOTH, AND CO.

who beg most respectfully to solicit a visit, to inspect the very superior STOCK of all KINDS of STONE now put upon the premises. Price Lists sent on application.

WATERSIDE PREMISES between Waterloo and Blackfriars-bridges with an extensive 15 600 feet, an unrestricted right of the river extending 120 feet, and a frontage communication with the Commercial-road.—To Mercantile Companies, Capitalists, Mer hants and Others This important Property TO BE LET on Lease for the term of nearly 20 years, together with the Buildings and Manufactories thereon It presents a valuable opportunity for the carrying out of any extensive undertaking where space and the facility of shipping is required. The Leases will have the power of erecting Warehouses or any other superstructure agreeably to their operations, with the option of purchase during the term.—Apply to Mr CHARLES PEATY, Estate Agent, Auctioneer and Surveyor, 11, Sherborne-lane, City.

TO TIMBER MERCHANTS, BUILDERS, MANUFACTURERS and OTHERS.—To BE LET or LEASE, EXTENSIVE PREMISES, near Mile-lane Hoo ton, consisting of a large Dwelling-house, Workshops, large Yard and Offices.—Apply to J. BALLINGALL, 34, Brook-street, New road.

TO CAPITALISTS

TO BE LET for BUILDING, in the first instance about EIGHT ACRES of GROUND, admirably adapted for the formation of a Marine Watering-place, on a much frequented part of the coast of South Wales. A good road has recently been made to the property, which is situated about six miles from a large town and station on the South Wales Rail way. It contains excellent quarries and an abundance of water; the building is good, and the scenery is celebrated for its beauty The desideratum of a watering-place upon this coast has long been felt by the numerous families that resort to it from the whole west of England. Distance from London by railway about six and a half hours.—For particulars apply by letter only, to Mr. Calder's Library, 1, Bat urst-street, Hyde-park-gardens, London.

FREEHOLD BUILDING GROUND.—TO BE LET or SOLD on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of Saint John's Wood For particulars apply by letter, post-paid, to W LEWIS, 2, Craven-terrace, Craven-hill, Paddington.

BUILDING and BRICK-EARTH LAND, at Holloway, TO BE SOLD or LET, in large or small quantities —Apply to Mr. PEACHEY, 17, Salisbury-square, Fleet-street.

NEW WINDSOR ESTATE. — Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences with every amenity are much needed in this beautiful locality The situation is the finest in or near Windsor, adjoining on the Park and Long Walk and commanding a splendid view of the Castle The close proximity of the Great Western and fifteen minutes' walk of the South Western Railway Stations Advances can be had by responsible parties —For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 2, Danes-inn, Strand.

FINCHLEY.—LAND fronting the Regent's Park-road, and Eastern-road, TO BE LET on Building Leases for ninety nine years, with power of entrance mad Plots from one to four acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village NEW A BUILDINGS Mr. Architect, 8, Albert's place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Grays-inn square.

STRATFORD, ESSEX. — FREEHOLD LAND, within three miles of London, ev tersele from land-tax and free of tithe. TO BE LET, on Lease, for a long term of years, in large or small plots suitable for manufactories or building purposes. Apply to Mr W H DEAN, Architect and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

TO BUILDERS, BUILDING SOCIETIES, or GENTLEMEN, seeking sites for the erection of Villa Residences. TO BE SOLD, about 34 acres of valuable FREEHOLD BUILDING LAND, situated on an eminence overlooking the borough of Reading, beautifully ornamented with timber, and commanding magnificent views. It has a frontage of above 3,000 feet to fine roads; and being within a few minutes' walk of the borough, enjoys all its advantages, although free from all borough rates. -For particulars, apply to Mr LEDIARD, Reading, Berks.

TO BUILDERS and CAPITALISTS.—Houses from 50l. up to 300l. a year rental, and villa residences are greatly in demand near the Royal Medical College, at Epsom. The soil is very dry, chalk and gravel, and rents are well known to be in the highest degree healthful and beautiful, which has already been proved by the pupils and others connected with the college; and as the demand for houses of a respectable class is very great, and will increase year by year, it is confidently believed that enterprising builders would find this locality worth notice. The party recommended to insert this advertisement is—but they are only one among many—in urgent want of a good house near the College, at Epsom; and may be referred to by letter, addressed E J, care of Mr. Grey, Epsom.—Some places are overdone with building, but Epsom is underdone, and consequently presents a fair field for enterprise.

TO BE LET, a large FOUNDRY, at Manchester, with canal and street frontage accommodation. A steam-engine on the premises can be had if required.—Apply to Mr. EDGWEED, Architect, 12, Queen square, Bloomsbury.

TO BUILDERS.—TO BE SOLD, or LET, PREMISES in DUKE-STREET, Manchester-square, consisting of three houses, with above offices in rear. The remainder of the freeholder for a long term, at 70l. per year; and, if put into repair, would readily realize from 20l. to 250l. per year. To be let at a rental, or the lease sold. Payment made easy. Apply to Mr. W. HOPWOOD, Aldine-chambers, Paternoster-row.

BUILDING LAND TO LET, about SIX ACRES, or in lots to suit purchasers, main sewer made A delightful situation. A very favourable arrangement can be made for any one wishing to commence building. The "Favorite" omnibus runs within 150 yards of the estate.—Apply to Mr. SMITH, 2, Albert Villas, Seven Sisters-road, Holloway.

TO BUILDERS AND OTHERS

CLAPHAM-COMMON.—TO BE SOLD or LET, with the option to purchase hereafter, FREEHOLD LAND in this very superior and delightful locality, in plots, suitable for the erection of villa and other first-class residences.—Apply by letter, post paid, to A. B care of Mr. Evans, Stationer, &c, Clapham Old-town.

TO CARPENTERS, CASEMAKERS, AND OTHERS.

MESSRS. ABRAHAMS and CO. have to DISPOSE of this genuine, compact BUSINESS, doing 400l. per annum, with goodwill and fixtures, only 85l. Situate near a leading thoroughfare, Tottenham-court-road, with good house, and every convenience Possession may be had immediately.—Apply, Messrs. ABRAHAMS and CO Business Agents, 115, Great Portland-street, and 32, Mortimer-street, Cavendish square, or enclose stamp.

REAL and PERSONAL ADVANCE COMPANY.—Incorporated by Act of Parliament.—This Company ADVANCES LOANS upon the security of freehold, leasehold, and other property, for various periods to be repaid by small monthly payments. Personal security accepted in addition where an advance to the full value of the property is required. For forms of application and further particulars, apply at the Offices of the Company, 4, Beaufort-buildings, Strand. Office hours from Eleven till Five. ROBERT SANDERS, Secretary.

MONEY. — A Gentleman has several THOUSAND POUNDS to LEND, on HOUSE PROPERTY, of undoubted security.—Apply, with particulars, to Mr. LYNE, Solicitor, 12, Penonce-lane, City.

MORTGAGES of ROCHESTER-BRIDGE ESTATES.—LOAN REQUIRED — The Wardens and Assistants of Rochester-bridge will be ready, on THURSDAY, the 24th day of JULY, 1856, at their AUDIT CHAMBER, at Rochester, in Kent to open and consider TENDERS or PROPOSALS from persons willing to advance LOANS on any part thereof, in sums of not less than 100l each, to be secured with interest Payable half-yearly, by transferable mortgage of the estates proper of the Bridge Corporation, in the prescribed form, and under the regulations and provisions of the Rochester-bridge Acts, 18th and 19th Victoria, such loans and the repayment thereof. All sums so advanced are to be paid within one week next after the acceptance of the proposal shall have been notified to the party making the same Further particulars and extracts from the Acts may be obtained on application to me. Proposals, in sealed envelopes marked "Tender for Mortgage," stating the amount offered to be advanced, and the rate of interest required, may be sent to me at any time previous to ELEVEN o'clock in the forenoon of the said 24th day of JULY, 1856

By order of the Wardens and Assistants,
GEORGE ESSELL, Bridge Clerk.

The Precinct, Rochester, June 30, 1856

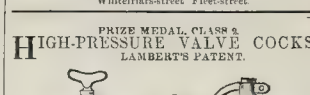
B. FOWLER, HOLMAN, and CO.



SOLE MANUFACTURERS OF HOLMAN'S PATENT DOUBLE-ACTION CESSPOOL, SEWER FLUSHING, LIQUID MANURE, AND UNIVERSAL FORCE PUMP.

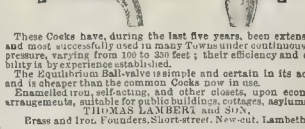
The simplest, cheapest, and best thing of the kind before the public; admirably adapted for thick substances; valve ways three times usual size; made to suit layers of all kinds, hot or cold, is portable, or can be fixed with perfect ease. Delivers a large quantity at small labour. A really good article, commanding extensive home and export sale.

BENJAMIN FOWLER and CO. General Engineers, Whitefriars-street Fleet-street

PRIZE MEDAL, CLASS 9.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.



The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS,

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from cast-iron, and applicable for all purposes and situations. Patent Closets and Basins with simply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—*Light, Dark, and Portland Cements* equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hard Lime, Laths, Slates and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Roofing &c. Paints, Stucco, &c. Marble Merchants and Importers. *Portzolano.*

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known Hard Stuccoes, dry quickly, and can be finished for use within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plaistering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties: that it is not affected by frost, and does not operate in damp situations. Actual COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT. Messrs ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company are on offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling purposes, decorations, &c. as having all the properties requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 80, Old Broad street, London; to Mr. MCNUMENT, 4, Caroline-place, Citycroad; to Mr. TINKWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKES.

Agents in London, Messrs. GEORGE POTTER and CO. Lime-merchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 19, North-Wharf-road, Paddington.

GREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality, Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders on advantageous terms.—Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 63, Moorgate-street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

PORTLAND and BATH CEMENTS. TATHAM and CO. 14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT. Glazed Stoneware Sewage Pipes. Brick, Lime, and Cement Merchants, TATHAM and CO. 14, South Wharf, Paddington.

PARIAN CEMENT, reduced to 3s. per bushel, from 1st inst. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GREY STONE LIME WHARFS, 12, UPPER CROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME, in any quantities from the above wharfs, or per barge, direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 8s. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wandsworth-hall Grey Stone Lime Works, on the Medway, near Rochester.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead; whilst the consumption of material is less than for one coat. It dries very fast and hard.

HUBBUCK'S BLACK BODY PAINT the same as the former, at three fourths the price.

HUBBUCK'S PATENT WHITE ZINC PAINT is ready for laid on for Iron Ships and iron exposed to salt water; neither bilge water, nor noxious vapours from cargo, nor heat of funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages, stamped, Hubbuck, Leaper, Painter; and when so marked the quality is guaranteed

HUBBUCK'S COPPER COLOURED PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. The presence of which this Paint is not attacked by the warm weather do barnacles attach to it.

Full part culars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.

OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at the Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT. PLASTER of PARIS

Manufactured by J. M. BLASHFIELD, at Millwall Isle of Dogs, Warehouse, No. 1, Wharf, Paddington-basin.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When lime is delivered by measure, the master has instructions to produce (on demand) the canal guarantee pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 16, South Wharf, Paddington, J. D. BLYTH, Sole Agent, will have immediate attention. Quarries and Manufactories, Stockton, near Southam, Warwickshire

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime Depôt, Bath, and Lias Cement Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

CHARLES RICHARDSON, 3 & 4, SOUTH-WHARF, PADDINGTON BASIN, COWLEY AND KIRKBY BRICKS, PORTLAND, ROMAN, AND OTHER CEMENTS, FAMWORTH GLAZED SEWAGE PIPES, BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 4 South Wharf, Paddington.

NOTICE.

CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now lime in GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.

All applications for prices and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

PLASTER of PARIS manufactured by T. P. BLYTH, Baldwin's-place, Gray's-inn-lane, Holborn. The trade and shippers supplied on advantageous terms. Roman and Keene's Cement, Tiles, Plasterers' Hair, Pan and Plain Tiles, Fire Goods, &c.

THE BEST HERTFORDSHIRE MALM SECONDS; THE BEST WHITE SUFFOLK and RED FACINGS; WHITE SUFFOLK PERFORATED BRICKS; DEEP-RED RUBBING BRICKS

Also COWLEY and KENT STOCKS, in any quantities.

J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY

(Within a short distance of the five bridges).

THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity

Also, STOCKS, of FIRST QUALITY.

J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for asphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 300 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above named articles can also be procured, as well as all kinds of fire bricks, both Welsh and Scotch, Fire-clay, Blue burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation

General Office—No. 13, GEORGE-YARD, LOMBARD-STREET.

Letters addressed to Grays, Essex, will meet with immediate attention.

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane Dulwich. Price of good stock bricks, 25s. per thousand on the field, for cash. Application to be made to the Foreman, A. BANHAM, at the Works.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good shape and quality, constantly on sale at H. D. DODS Brickfield, Wilton-road, Pimlico, a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and prices of bricks, &c.

Malm Pieces, half-washed Stock and Pale Pieces, also in sale, these pieces are good, well burnt, and nearly free from defects; a very large proportion of the stock being suitable for external facing.

Apply at the NAVIGATION Office, at the Coaling-house, Horseferry-road, Millbank-street, near the Rosemary Branch, Hoxton.

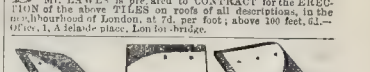
N.B. Eight-horse and Pair Boards of proved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power, one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856. Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

CHEAP WHITE BRICKS, for FACING HOUSES (Beal's Patent). These bricks are of excellent texture and colour, and impervious to frost, and do not vegetate or become green. For particulars, address, Patent Brick Works, Rugby, Warwickshire

FIRE-BRICKS, LUMPS, TILES, &c.—FURNACE-BUILDERS, GAS COMPANIES, and CONSUMERS of these Goods generally, can be SUPPLIED with every description from our Wharf here, on the most advantageous terms. TAYLOR and CO. 9, Bankside, Southwark.

BRICKS.—Mr. RYDON, having made more bricks than he requires for the builders on his estate, High-lane, New-park is willing to make arrangements for supplying Builders and others requiring first class STOCK or RED BRICKS on advantageous terms.—For particulars, apply at the Estate Office, Delf's-farm, Stoke Newington green.



BRICKS.—Excellent hard-burnt RED BRICKS, of good colour and shape, suitable for facing or other purposes; also Malms, good Stocks, and a quantity of Grey Stock Place. J. C. W. TRICES Agricultural Drain-ing Tiles, from 1½ inch to 6 inches in the bore, and Arch Bricks suitable for culverts. The whole of the above may be inspected in large quantities on the Brentwood Railway Brick and Tile Work, and Wharf, Brentwood, Essex, adjoining the goods station of the Eastern Counties Railway Company, where they will be loaded into the trucks for any station on the line.—Address, Mr. LEVETT, Brentwood, Essex.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented!

HENRY COUNT, Sec. 37, King William Street, City.

THE PRIZE MACHINES of the UNIVERSE—CLAYTON'S PATENTS.—CLAYTON'S PRIZE BRICK and TILEMAKING MACHINES will be EXHIBITED in OPERATION, during the Show of the Royal Agricultural Society of England, at Chelmsford, on the 15th, 16th, 17th, and 18th day of this month (July).—Manufactory, Atlas Works, Upper Park-place, Dorset-square, London.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES.

For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.

SOLE AGENT.

J. B. LAWES, 1, Adelaide-place, London-bridge.

This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large piece of roofing, effecting a saving in slates, time, and. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.

Price 4d. each, tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge includes tiles ordered in Agent's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Ruby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Mancester-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufacture second to none as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

H. and R. HAYWOOD, Brownhills Blue Metallic Tileries, near Burslem, Staffordshire; London Depôt, 15, South Wharf, Paddington, Manufacturers of improved Plain, Ornamental Roofing, Ridge, and Flooring Tiles, for Churches, &c.; also Metallic Plain and Socket Sewerage Pipes, &c. adapted for sanitary and Railway purposes. They are extensively used on the Lancashire & Western, Great Western, Trent Valley, North Staffordshire, and other Lines of Rail, and highly approved. Warranted impermeable, and to resist all acids and exhalations.

*** A FIRST-CLASS MEDAL was awarded to H. and R. HAYWOOD, by the Jury of the GREAT EXHIBITION.

WILLIAM GILBERT, Manufacturer of all kinds and colours of Tiles, Quarries, Drain-pipes, Moulded Bricks, Backets, Vases, Chimney-pots, Stoneware Glazed Sewerage Pipes, Ornamental Quoin Blocks, &c. Tividale, Staffordshire.

HOGG'S GARDEN EDGE TILES.—The attention of persons engaged in laying out Gardens for Public Institutions is solicited to these Tiles, as an elegant, cheap, and permanent substitute for box edging. In a fair they resemble Bath stone, are very hard, easily laid down, afford no shelter for vermin, and act as a drain to the paths. Price 1s. per lin. or about 40l. per rood run. Full particulars on application to R. BLACKLEY, Witham, Essex.

PAINT, certified by the Government Engineers and Contractors to be the CHEAPEST and BEST ever discovered for wood and iron, price 28s. per cwt. Apply to the London Anti-Oxide Paint Company, D. WALKER, Secretary, 29, New Bridge-street, Blackfriars.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without the least change. These Paints have been tested for five years, and are now being used in various parts of the Royal Arsenal at Woolwich, and have also been made use of in the Government Dockyards at Devonport, Portsmouth, and Pembroke, and in many of the Government Steamers, and have given the greatest satisfaction. Testimonials can be seen of the above, and of the Admiralty Contractors, who will certify that coats of Wolston's Torbay Iron-Paint will effectually cover as much surface as 3 lbs. of either White or Red Lead, and that it will protect atmospheric action better than Lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all priming purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

GREAT REDUCTION IN PRICE OF DOULTON'S DRAIN-PIPES.

HENRY DOULTON AND CO.

Beg to inform Builders, Contractors, and others, that they have made a considerable REDUCTION in the PRICES of their

GLAZED STONEWARE DRAIN-PIPES,

STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B Prospectuses, with Prices and Testimonials, forwarded post-free, on application. Persons in want of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

THE BRANKSEA POTTERY,

NEAR POOLE, DORSET.

GREAT REDUCTION IN PRICES OF DRAIN-PIPES.

TO THE METROPOLITAN BOARD OF WORKS, DISTRICT BOARDS, BOARDS OF HEALTH, TOWN COUNCILS, IMPROVEMENT BOARDS, SURVEYORS, AND BUILDERS.

THE BRANKSEA POTTERY and CLAY COMPANY are prepared to supply a Description of Glazed Drain-pipes, Bends, Double and Single Junctions, Closet-pans, &c. Also, Terra-cotta Chimney-pots and Fire-bricks of a very superior quality at moderate prices.

N.B. A LIBERAL DISCOUNT TO THE TRADE. A LARGE ASSORTMENT OF GOODS CONSTANTLY ON SALE.

The clay obtained from the pits on the island of Branksea is of the finest quality, and the goods are manufactured by men of long experience in the trade, with the aid of powerful machinery. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.

A list of prices forwarded free on application to Mr. T. G. BECK, at NEW WHARF, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTS, at the Works, Branksea Island, Poole, Dorset.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO., 2, DOWGATE-HILL, LONDON.

THE SEVRES GLASS COMPANY.

STEAM-ENGINES for SALE.—First-rate London-made horizontal STEAM-ENGINES, from 6 to 25-horse power. These engines are constructed with great care and attention to economise fuel, attain great speed and power, and are twelve months' warranty given. For prices and further particulars, apply to JOHN MUSTO and CO. Engineers, Millwrights, and general contractors, Old London Iron Works, Wapping.

N.B. Gentlemen requiring any kind of machinery are respectfully invited to inspect the capabilities of the above works.

STEAM-ENGINE and STAND-PIPE.—TO BE SOLD, at the PREMISES of the WATER COMPANY, at Brighton, a 20-horse power STEAM-ENGINE, boiler, and fittings; also an arrangement of cast-iron stand-pipes, consisting of four 9-inch and one 12-inch pipes, 50 feet high. The above are not worked in consequence of the recent alterations. To be seen on the spot, or a drawing of the stand-pipe to be inspected at the office of Messrs. EASTON and AMOS, to whom TENDERS may be sent.

Grove, Southwark.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 29, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

Sold by all the principal Stationers in town or country.

THE EXTENSIVE SHIP-BUILDING ESTABLISHMENT AND IRON WORKS OF MR. C. J. MARE, AT BLACKWALL.

MESSRS. FULLER and HORSEY, in conjunction with Messrs. PULLEN and SON, are instructed by the Assignees with the consent of the Mortgagees, to OFFER for SALE by AUCTION, at the AUCTION MART, London, on the 30th of JULY next (unless an acceptable offer be previously made by private contract), in four lots, the extensive SHIP-BUILDING ESTABLISHMENT and IRON WORKS of Mr. C. J. Mare; together with the whole of the valuable fixed PLANT and MACHINERY. These works, which together occupy a site of 14a. 2r. 30p. are situated at Blackwall, on the opposite banks of Bow-creek at its junction with the Thames, a portion of the works having a direct frontage near the Thames. The land frontages abut on Trinity-road and Orchard-place, Blackwall, and on the North Woolwich Railway, near the junction of the Victoria Dock Line, by means of which and the North London Railway, direct communication with the northern and midland districts is established. The approach from the City is easy and frequent throughout the day, by the Blackwall and North Woolwich Lines, from their joint terminus in Fenchurch-street, by means of which the northern and southern division of the works are reached within half an hour; there is also a ferry across Bow-creek for the facility of communication. The resources of the establishment for the purposes of ship-building, conversion of iron, and general engineering works are unequalled in the world, upwards of 6,000 tons of shipping having been built and launched in the years 1854 and 1855 from the yards, while the building, repairing and iron works are capable of 17,000 tons of iron have been hammered and rolled within the same period, and from the four fine upon its of machines of castings delivered. The high character of the work executed has gained for the firm a world-wide reputation. In the ship-building Department, vessels have been built for the English, Turkish, Russian, Spanish, and Sardinian Governments, for the Peninsular and Oriental, the General Screw, and the General Steam Navigation Companies, the Dover Mail Packet Company, the South-Western Railway Company, and others, many of which have attained a high character for speed and freedom from failure in any one case. Among others may be named the renowned *Himalaya*, of 3,550 tons burthen, the *Pera*, the *Prince*, the *Candia*, the *Hydaspes*, the *Argo*, the *Cressus*, the *Golden Fleece*, the *Inkerman*, the *Adventure*, the *Dover Packet*, the *Dover Pilot*, the *Dover Telegraph*, with many others; also yachts for the Emperor of Russia and his Highness the Viceroy of Egypt; and such are the appliances and facilities afforded by existing arrangements, that the rapidity with which the works are carried on is perfectly surprising. The works executed at the forge have been equal in magnitude, including crank shafts of vessels of 800 tons in weight, and forgings of the largest description for the principal engineers in London, the total weight of hammered iron produced in one year exceeding 2,000 tons. The Engineering Departments have executed a considerable portion of the Britannia Tubular Bridge, upwards of 1,000 tons of wrought-iron bridges for the East India Railways, the wrought-iron bridges for the North London Railway, the beautiful iron roof for the terminus of the Blackwall Railway, and the portion of the iron work at present completed for the new bridge at Westminster; while in the Boilermakers' Department, marine boilers, equal to 4,000-horse power, can be produced annually.

The prime pal buildings are on the freehold portion of the property, and have been erected in the most substantial manner; they include the hammer and rolling-mills, the foundries, engineers' and ship-wrights' shops, pleasant pattern-makers' shops, with numerous sliding doors from 6 feet to 12 feet wide, and are fitted with five Nasmyth's hammers from 2 cwt to five tons, the two larger ones having double cranes and furnaces, thus affording a two-fold capacity; two tilt hammers, three sets of rolling mills for plates and bars, worked by condensing engines of 100 horse power equal to 500 horses, with vertical shearing and punching presses, bending rolls, planing and slotting machines, drilling machines, numerous screw cutting lathes, to one of which are adapted for the heaviest work; smiths' forges, plate, angle, and balling furnaces; fitters' and turners' shops, fitted up for the use of makers, and with all the modern improvements. A considerable part is now within three years, a spacious boiler-makers' shop, fitted with fine furnaces, shearing, punching, and drilling machines, steam riveting machines, travelling cranes, &c., a plumbers' shop, with extensive sloping plate furnaces, &c.; a carpenters' mould loft, a saw mill fitt d with timber and deal sawing frames, planing, moulding, and mortising machinery worked by a 60-horse power steam-engine. In the ship-yard are twelve ships for building; vessels of the largest class can be launched into the river from the ship-building and block-making shops; and two capacious sheds, measuring 300 feet long by 60 feet wide, afford ample room for building vessels of the largest class, and also for the fitting out of an extensive establishment of great extent, embracing the highest reputation for the character of the works performed, possessing facilities for the transaction of business unequalled by any, and containing within itself all the necessaries requisite to command a large and lucrative trade. The tenure of the property is partly freehold and partly leasehold

The works may be viewed till the sale, by cards only, which may be obtained shortly, together with printed particulars, at the Offices of the Official Assignee, Aldermanbury; of Messrs. LAWRANCE PEARCE, and BOYER, Solicitors, Old Jewry; of Messrs. BOYER and HAWKINS, Solicitors, Warnford-court, Throgmorton-street; of Messrs. FULLER and HORSEY, Auctioneers, Cripplegate; and of Messrs FULLER and HORSEY, Billiter-street, London.

SOUTHALL, MIDDLESEX. IMPORTANT to BUILDERS.—An excellent Freehold Residence, seated in park like grounds, and sixteen acres of rich meadow land, having valuable frontages to the high road, situate close to the station, with immediate possession.

CHINNOCK and GALSWORTHY have been favoured with instructions to SELL by AUCTION, on THURSDAY, JULY 24th, at TWELVE, at the MART (unless previously disposed of by private treaty), the important FREEHOLD and LEASEHOLD ESTATE, late the residence of Mrs. Serjeant Lawes, situate near the high road at Southall, comprising a good square-built family house, stable, double coach-house, detached pleasure-ground and kitchen gardens, fish-pond, park-like grounds, well timbered, and seventeen acres of superior meadow land in high cultivation; the whole lying in a ring fence, and having very valuable building frontages. Descriptive particulars, with plans, may be obtained of Thos. Browning, Esq. Solicitor, 1, Hatton-court, Threadneedle-street; of Geo Wales, Esq. Surveyor, Great St. Helen's, and at the Auctioneers' Offices, 28, Regent-street, Waterloo-place.

FREEHOLD BUILDING LAND, four miles from the City, close to the Forest-gate Station, Stratford, Essex

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, on MONDAY, JULY 28th, at TWELVE, in seven lots, eligible and desirable offer be previously made), TEN ACRES of eligible FREEHOLD BUILDING LAND, situate close to the Forest-gate Station, on the Eastern Counties Railway, near Wanstead Park, and admirably adapted for the erection of villas and moderate-sized houses. The lots will have frontages varying from 60 feet to 80 feet each to well-made roads. May be viewed, and printed particulars had at the Eagle and Child, Forest-gate; of D. B. Sladen, Esq. 2, King's Arms-yard, Moorgate-street; at the Mart; and of Messrs. H. Brown and T. A. Roberts, 23, Throgmorton-street.

FREEHOLD BUILDING LAND CARSHALTON, SURREY, near the Railway Station.

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, on MONDAY, JULY 28, at TWELVE, in Ten Lots (unless an acceptable offer be previously made), about TWELVE ACRES of FREEHOLD BUILDING LAND, situate within a few minutes' walk of the Carshalton Station, on the Croydon and Epsom Railway, about eleven miles from London. The lots will have frontage varying from 300 feet to 600 feet each, and extending half a mile to two acres each. The land stands on an eminence, commanding extensive views, is very dry, and desirably situate for first-class residence, the neighbourhood being particularly healthy.—May be viewed, and printed particulars had at the M Bourne Hotel, Carshalton; of D. B. Sladen, Esq. 2, King's Arms-yard, Moorgate-street; at the Mart; and of Messrs. H. Brown and T. A. Roberts, 23, Throgmorton-street.

NO. 5, CASTLE-STREET, HOLBORN-BARS.—120,000 feet of VENEERS ABSOLUTE SALE.

MESSRS. HARDY have received instructions to SELL by AUCTION, on the PREMISES, on THURSDAY, JULY 24, at TWELVE o'clock, without reserve, in lots, suitable to all classes of buyers, about 120,000 feet of very superior WALNUT, Mahogany, Rosewood, Bird's-Eye Maple, and Dyewood Veneers.—Catalogues on the Premises; and of the Auctioneers, 32, Castle-street, Holborn-bars.

TO SHIP-BUILDERS, TIMBER-MERCHANTS, and OTHERS.—Important Sale of valuable Oak Timber, in the parishes of Farnham, Shereham, Chelsfield, and Farningham, Kent.

MR. WM. HODSOLL is favoured with instructions from Sir P. H. Dyke, Bart. and Wm. Waring, esq. to SELL by AUCTION, at the BULL INN, DARTFORD, Kent, on THURSDAY, JULY 24th, 1856, at THREE o'clock, 663 very superior OAK TIMBER TREES, including many of large meitings and excellent quality, lying in various woods in the above-named parishes. Also 131 oak tellers, 3 capital larch, and 3 large beech trees. 60 stacks of oak cordwood, about 4,000 oak-top faggots, 2,030 bavins, 830 bundles of spray, &c. The timber and underwood above named may be viewed at any time previous to the sale, and will be shown by Richard Packman, Crockenhill, Eynsford; Philip Taylor, of Mount Hall, Chelsfield; and James Dunnage, of Bull-street, near Farningham. Catalogues may be had eight days previously at the Inns in the neighbourhood; at the Place of Sale, of the persons who will show the timber; and of Mr. William Hodsoll, Auctioneer, &c. Farningham, Kent.

TO BUILDERS, WHEELWRIGHTS, CARPENTERS, and OTHERS.—Saw Mills, Eynsford, Kent. Sale of a large quantity of valuable Surplus Stock of Timber, &c.

MR. WM. HODSOLL is instructed to SELL BY AUCTION, at the EYNSFORD SAW-MILLS, on FRIDAY, JULY 25th, 1856, a large quantity of exceedingly useful TIMBER of various sizes, suitable for builders and a variety of purposes; comprising some excellent oak, sole, elm, ash, and deal boards, birch, and wheelwright's stuff, and English scantling, quantity of English fir, cut into halvings, &c. a variety of slabs, fencing stuff, rails, ash bats, useful wheelers' wax, many lots of firewood, &c. &c. May be viewed three days previous to the Sale, and catalogues had one week previously, at the Inns in the neighbourhood; at the Place of Sale; and of Mr. William Hodsoll, Auctioneer, &c. Farningham, Kent.

N.B. An Omnibus leaves the Dartford Station on the arrival of the London from Gravesend Station, for Farningham, which is 11 miles only from the Saw Mills.

Building Materials of Eleven Houses, No. 115 A and 116 A, High-street, Shoreditch, and Parish's court.

MR. GAIRDNER will SELL by AUCTION, on the PREMISES, on THURSDAY, JULY 17, at TWELVE, the MATERIALS, comprising 250,000 bricks, pan and plain tiles, timber flooring, lead and Zinc gutters, fittings and fixtures, plate-glass shop-front, and useful effects.—May be viewed the day prior and morning of Sale. Catalogues had at the Offices of Messrs. J. B. and H. Clutton, Whitehall-place; and of Mr. Gairdner, 159, Tottenham-court road.

TO IRONMONGERS, CABINET-MAKERS, and OTHERS.

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on TUESDAY, the 22nd of JULY, at ELEVEN, at the SALE-ROOMS, No. 28, Leadenhall-street, in lots, without reserve, removed for the convenience of sale, a STOCK of IRONMONGERY, including 500 locks, wrought and cast hinges, an assortment of cabinet brass work, two tons cast and sheet steel, Sheffield and Lancashire tools, sixty Bristol grindstones, two tons castings, 200 fenders, register and Rumford stoves, black bollis-ware, two gas chandeliers, and a general assortment of ironmongery.—To be viewed on Monday previous to the sale, when catalogues may be had at the Rooms; and of Messrs. Fuller and Horsey, Billiter-street, City.

KENSINGTON-PARK, NOTTING-HILL.—Most important and eligible Plots of Freehold Building Land, in this admired Locality; the Roads and Sewers formed.

MR. ROBINS is instructed to SELL by AUCTION, at the MART, on THURSDAY, JULY 31, at TWELVE, in several lots, FREEHOLD BUILDING LAND, of an extremely attractive and important description, intended to form both sides of the Sussex road, leading from the Ladbroke-terrace, at Kensington-park, Notting-hill. The great beauty and advantages of this much admired locality have been most happily developed by the architect originally directed to prepare the plan for a building operation, which is now rapidly advancing towards successful completion, by the much-admired new church, now nearly finished, being in the vicinity. Residences of a superior character have been erected, and are in course of being finished. A glance at the plan will at once convey the intimate connection of the land with the whole of the most beautiful part of the estate, and the advantages to be derived from assisting to carry out the original scheme. The land will be offered in lots of moderate size and value, capable of being divided with advantage and profit; and the building public are invited to inspect the plans, and co-operate. The roads and sewers are already formed at great expense.—May be viewed, and plans had at the Mart; at the Clarendon Hotel, close to the land; of Messrs. H. and W. Lake and Kennall, Solicitors, 10, Lincoln's-inn-square; at the Mart; and at Mr Robins's Offices, Covent-garden.

TO CARPENTERS, BUILDERS, CABINET-MAKERS, COACH-BUILDERS, and OTHERS.—Timber Merchant's Stock.—Charles-street, Hungerford-road.

MR. W. R. GLASIER is instructed to SELL BY AUCTION, on the PREMISES as above on TUESDAY, JULY 22nd, at TWELVE for ONE, the capital dry and well-seasoned STOCK; comprising 1,100 best and second yellow pine planks, 1,200 feet wide pine deals and battens, 300 Christiana yellow and white deals; 5,500 feet Cuba and Honduras mahogany in various thicknesses, 2,000 squares white and yellow floor boards, 1,200 feet wide pine panel boards, pine and spruce quartering, &c.—May be viewed the day prior and morning of sale, and catalogues had on the Premises; at Garraway's; and of the Auctioneer, 41, Charing-cross.

MARBLE.

MESSRS. EVERSFIELD and HORNE are instructed by Mr. Farrarotti to announce that the SALE of MARBLE BLOCKS at CARRARA WHARF, Thames-bank, Chelsea, which, from the unfavourable state of the weather, was obliged to be postponed on Tuesday last, will take place on WEDNESDAY, JULY 23rd. — Catalogues may be had on the Premises, and of the Auctioneers, 40, Parliament-street.

Note.—Approved Bills will be taken in payment.

WEYMOUTH.—TO BE SOLD BY AUCTION, BY

MR. MILLEDGE, on WEDNESDAY, the 27th day of AUGUST, 1856, at Luce's Royal Hotel, Weymouth, at THREE o'clock in the afternoon (unless an acceptable offer shall be previously made by private treaty), by direction of the executors of the late William Thomson, Esq. a compact MARINE VILLA RESIDENCE, with garden, coach-houses, and greenhouses adjoining, forming a most unique and retired residence, combining the advantages of a small family, and combining the advantages of entire seclusion and privacy in the midst of the varied society of this salubrious watering-place. The house, which was built fifty years ago, is substantial and replete with convenience, stands in a pleasure-ground of above an acre, elegantly laid out with well-selected flowers and shrubs. One of the sitting-rooms opens into a conservatory, about 41 feet by 21, stocked with choice and rare plants. The furniture and plants may be taken at a valuation, at the option of the purchaser. The property adjoins Gloucester Lodge, formerly the residence of George III and his Court.

At the same time will be Sold, in separate lots, a Dwelling, with spacious store-rooms, used as a gardener's residence, and Sittings in St. Mary's Church.

The residence and pleasure ground are held in fee, the garden for one life, and the dwelling-house, premises, and sittings for terms of years. The property may be viewed by written orders only, to be obtained of Messrs. Jenkins, Phelps, and Bennett, 14, Red Lion square, London; or Mr. Milledge, auctioneer, &c. 4, Fisherick-place, Weymouth, from whom further particulars may be obtained.

TO BUILDERS.—Thirteen capital Brick-built Carcasses, in an excellent position, at Battersea-rise.

MESSRS. SPILLMAN and SPENCE will SELL by AUCTION, at the MART, on THURSDAY, JULY 24, at TWELVE, thirteen capital sound CARCASSES for ten and eight room houses, six having shops; also the Brunswick Arms, a substantial and imposing structure, nearly complete, well situate in Brunswick-place, Brunswick-road, and Whitton-road, in the high road, Upper Holloway, near the Archway Tavern—an undeniable locality—severally held for 99 years, at low ground-rents.—Particulars and conditions of sale at the Mart; of G. Cannell, Esq. Solicitor, 3, Basinghall-street, Fleet-street; and at the Auctioneers' Offices, 43, Bell-yard, Temple-bar.

Final Portion of the Valuable Stock of Messrs. Browne and Co. University-street, including Marbles, Bronzes, Mosaics, Chimney-pieces, Sculpture, Pedestals, a Stained Glass Window, Architectural Casts, &c.

MESSRS. RUSHWORTH and JARVIS beg to announce that the SALE of the final portion of the valuable STOCK of Messrs. Browne and Co. will take place on WEDNESDAY, the 30th of JULY, and two following days, at the GALLERIES, University-street, and will include VASES, STATUES and GROUPS, in marble and stone, adapted for gardens and pleasure grounds; two mobile marble baths (from Verona), a quantity of Italian paving-tiles, of mosaic and other description, many very beautiful statuary and pure coloured marble chimney-pieces, designed with great taste, and sculptured by first-rate artists, including two of superb character; fine specimens of sculpture in pedestals, candelabra, brackets, and ornaments; a collection of valuable architectural casts, from celebrated originals, worthy the attention of builders and architectural pupils; also a variety of objects of taste and utility, being the last portion of this well-known and tastefully-selected assemblage.—May be viewed two days prior to the sale, and catalogues had, on the Premises; and at the Offices of Messrs. Rushworth and Jarvis, Saville-row, Regent-street; and 19, Change-alley, Cornhill.

IRONMONGERY BUSINESS.—FOR DISPOSAL, a first-class BUSINESS, doing an extensive and lucrative Trade in Wines, and furnishing Ironmongery. The returns are about 15,000l. per annum, a considerable proportion of which is for cash. The premises are in a commanding situation, in one of the leading thoroughfares in London, and a large sum of money has been expended within a few years in rendering them externally attractive, and in adapting the interior commodiously for the various branches of the business. The stock is all modern, and of the best description. About 6,000l. will be requisite to purchase and carry on the concern, 5,000l. of which may remain on mortgage for a few years; and to two or three active young men, who can command that sum, an opportunity is thus presented of purchasing a business, which is of the first class, of a permanent character, and capable of still further extension.—Apply (by letter only) to Messrs. FULLER and HORSEY, 13, Billiter-street, City.

TO UNDERTAKERS, CABINET-MAKERS, and UPHOLSTERERS.—WEYMOUTH.—TO BE DISPOSED OF, in the above line, a highly respectable BUSINESS, many years established in its fashionable and daily improving seaport. The business being resigned in consequence of the decease of the proprietor, affords a desirable opportunity to any young man with capital and energy, being capable of considerable extension and improvement.—Apply to Mr C HANCOCK, Executrix, 62, St. Thomas-street, Weymouth.

TO BRICKLAYERS and PLASTERERS.—TO BE DISPOSED OF, for cash, an established, well-paying JOBBING BUSINESS, situate near the Regent's park. Any person wishing to enter the above line will find this worthy their attention, as every facility will be given for leaving the same. Address, A. B. Mr. Matthews, 19, Frederick-place, Hampstead-road.

TO MANUFACTURERS, particularly those engaged in Building.—CAPITALISTS have now a good OPPORTUNITY of EMBARKING in an OLD-ESTABLISHED CONCERN, in full work, principally a ready-money trade. The affairs will bear the fullest investigation, and, from circumstances, the concern is now to be disposed of. A capital of about 25,000l. will be required, the party taking to stock, machinery, and debts; but the amount would be considerably reduced, if the stock and debts were retained on account of the vendors.—Further information may be obtained by application to Messrs. WOODHOUSE and PARKIN, 8, New-square, Lincoln's-inn; or to Messrs. WARRY, ROBINS, and BARGES, 7, New-inn, London.

BUILDER'S BUSINESS TO BE SOLD. Has been established thirty years, and has a good jobbing trade. Coming in about 600l.—For full particulars apply to Mr. C. BROWN, House and Estate Agent, West Croft-place, Hammersmith.

TO FURNISHING IRONMONGERS, WHITESMITHS, BELLHANGERS, GASFITTERS, &c.—TO BE DISPOSED OF forthwith, an ELIGIBLE CONCERN, in the above trades, with convenient workshop and good trade accommodation, in a populous village, about twenty miles from London; in an excellent neighbourhood, with a prospect of immediate railway extension, and a consequent increase of building. In the first instance a large letter of inquiry to A. Z. care of Mr. WEAKLIN, stationer, No. 9, St. Paul's-churchyard, London.

TO PLUMBERS, PAINTERS, and GLAZIERS.—A genuine but small old-established BUSINESS, a short distance from London, producing 130l. per annum profit. The premises are small, but in good repair, and rent 15l.—Apply at the Pipe and Window Lead Warehouse, 52, Tottenham-court-road.

TO GLASS-CUTTERS, PLUMBERS, GLAZIERS, &c.—TO BE DISPOSED OF, a first-rate BUSINESS in the above branches, situate in a populous neighbourhood, and established nearly 30 years, with good connection. Rent and taxes only 30l. per annum. Full particulars may be obtained at the Savoy Glass Company's, 4 and 5, Savoy-street, Strand, or of Mr. THOMAS ENGELBACH'S, Glass-bender, Thrawl-street, Spitalfields.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, July 12, 1856.

JOSEPH J. JENKINS, Secretary.

EXHIBITION of ART-TREASURES of the UNITED KINGDOM, to be OPENED at MANCHESTER on the 1st MAY, 1857.

PATRONS.

Her Majesty the QUEEN.
His Royal Highness Prince ALBERT.

PRESIDENT.

The Earl of ELLESMERE, K.G. Lord lieutenant of Lancashire.

EXECUTIVE COMMITTEE.

Thomas Fairbairn, esq. Chairman.

The Mayor of Manchester.	Joseph Heron, esq.
Thomas Ashton, esq.	Edmund Potter, esq.
William Entwisle, esq.	Sigismund J. Stern, esq.

GENERAL COMMISSIONER.—John P. Deane, esq.

The object of the proposed exhibition is to secure a collection of the choicest and most instructive works which illustrate the Ancient and Modern Schools of Art: Oil Paintings, Water-colour Drawings, Engravings, Sculpture in Marble and Stone, Carvings in Ivory and Wood, Bronzes, Coins, and Works of Artistic Excellence in Gold, Silver, Steel, or Iron, in Glass and Earthenwares, Terra Cotta and Plaster, will necessarily constitute the main features of the Exhibition.

The Executive Committee respectfully invite communications from possessors of Art Treasures who may feel interested in the success of a scheme which aims at the worthy illustration of the art-wealth of the United Kingdom.

From the known catalogues of the resources of the country, thus extended, the committee propose, with the assistance of officers of acknowledged competency, to make such a selection as will enable them to place before the world an Art Exhibition not less valuable to the student from its chronological arrangement, than attractive to the public from its beauty and completeness.

The committee do not desire to elicit from manufacturers specimens of their productions, either for competition or sale.

The Exhibition Building will be erected on a site adjoining the Botanic Gardens, distant about two miles from the centre of the City, and quite free from atmospheric impurities. Great consideration has been given to the mode of lighting the halls for the display of pictures and sculpture, and every precaution will be taken to protect the works of art from injury.

In all cases where desired by the owners, the Committee will insure the art treasures contributed.

There will be railway communication from all parts of England, direct to the Exhibition Building, and contributions will be received from, and returned to their owners, free of expense.

Communications may be addressed to the Chairman, 100, Mosley-street, Manchester.—By order of the Executive Committee,

CHARLES H. MUNCHIN, Secretary.

Offices of the Exhibition, 100, Mosley-street, Manchester.

CHESHIRE AGRICULTURAL SOCIETY.

Patron and President for the year, Field-Marshal the Viscount COMBERMERE, G.C.B. &c.

ANNUAL MEETING at NANTWICH, SEPTEMBER 4, 1856.

The following PREMIUMS, the competition for which is not restricted to members of the society, will be given for the best ESSAYS on the following subjects:—

1st (given by E. D. Broughton esq.) for the best Essay on the most advantageous way of Wintering a Dairy stock.

2d, or Plate of that value, or the Society's Silver Medal, for the best Essay on the most profitable way of Managing a Clay Farm of 200 statute acres, consistently with good husbandry and the due maintenance of the freehold.

3d or Plate of like value, or the Society's Silver Medal, for the best Essay on the Construction of a Farmhouse, Cottages, and all other requisites necessary for a Dairy Farm of 200 statute acres, such Essay or Paper to be accompanied by a plan or model, together with a specification and estimate of the probable cost of erecting the same.

The Essays are to be sent to the Secretary on or before the 14th AUGUST next, and the writer of each Essay is requested to distinguish the same by a motto, and to enclose a sealed envelope therewith, containing a duplicate of the motto, and his name and address. These envelopes will not be opened until the prizes are awarded by the Chairman of the Committee.

RICHD. T. BECKETT, Secretary.

Oulton Farm, Tarporley, July 14, 1856.

ARCHITECTURAL EXHIBITION.

Exhibitors in the Department of Materials and Inventions connected with building, should apply immediately for space (by letter stating all particulars) to Mr. EDMESTON, junr. as the committee are ready to allot the same as soon as a sufficient number of applications are made, and those who defer applying will be disappointed as on the last occasion. The Exhibition will open in DECEMBER next, at the Galleries, Suffolk street.

JAMES FERGUSSON, F.R.A.S.,
20, Langham-place,
JAMES EDMESTON, Junr.,
5, Crown-court,
} Honorary Secretaries.

COMPETITIONS.

PARISH of BRIGHTON.—To ARCHITECTS and OTHERS.—The Brighton Burial Board are desirous of procuring DESIGNS for the ERECTION of TWO CHAPELS, RECEIVING HOUSE, SEXTON'S LODGE, and MEMORIAL GATEWAY accompanied with detailed working drawings, specifications and estimates. The outlay must not exceed 2,250*l*. The Board will award to the author of the best design in their judgment, subject to the approval of the bishop of the diocese, the sum of 20 guineas; and to the author of the second best design the sum of 10 guineas. Designs for which premiums are awarded will become the property of the Burial Board, who will not bind themselves to employ the author to superintend the carrying out the works. The Board will not pay either of the premiums unless a sufficient Tender be made for the actual execution of the works at or within the stipulated sum of 2,250*l*. If the Board employ the author of the design to superintend the execution of the buildings the premium will merge in the commission, which is not to exceed 5 per cent. on the lowest Tender accepted, including travelling and other expenses. A plan and section of the land may be inspected, and general instruction be obtained, at the office of the Burial Board, Parochial Offices, Church-street, Brighton, on application to Mr. MAYNARD, the Surveyor. Designs must be deposited at the said Offices, free of all expenses, on or before 4th day of AUGUST next, marked with an emblem or motto, and accompanied by a sealed note, having the same emblem or motto on the outside, and enclosing the name and address of the author. The designs not approved will be returned to the authors on application. By order of the Board.

July 4, 1856. SOMERS CLARKE, Vestry Clerk.

CONTRACTS.

CONTRACTS.—WAR DEPARTMENT.—To BUILDERS and CONTRACTORS.—The Commanding Royal Engineer at Aldershot hereby gives Notice, that sealed TENDERS will be received by the Director-General of Contracts, War Department, Pall Mall, London, until TEN o'clock, on SATURDAY, 9th AUGUST, 1856, from parties willing to Contract for the ERECTION and CONSTRUCTION of

Two wooden Buildings for chaplain's quarters.
One ditto for commissariat storekeeper's ditto.
Two Rocket and Fives Courts.
Foundations for two Iron Stores.
Wooden Fitments to Barrack Store (to form one Tender); and
Two large Iron Stores, exclusive of Foundations (to form a separate Tender).

Plans may be seen, and specifications and forms of Tender obtained, on application at the Royal Engineer's Office, Aldershot, on and after the 18th instant.

The War Department reserves the right of rejecting the whole or any of the Tenders.

NOTICE to BUILDERS and CONTRACTORS.—ROYAL ENGINEER CONTRACT.—The Commanding Royal Engineer of the Woolwich District hereby gives Notice, that sealed TENDERS, in one sum, will be received at the Office of the Director-General of Contracts, Pall-mall, London, up the 9th of AUGUST, 1856, from such persons as may be desirous of CONTRACTING for the ERECTION, at Shoeburyness, of a HOSPITAL, with the necessary out-buildings, enclosure wall, &c. 24 quarters for the hospital servants and four for staff sergeants, and of a quarter for the Assistant Superintendent of Experiments; also for an extension of the present Guard-house, and the erection of contiguous thereto, of a store and offices. The specifications and drawings may be seen, on application at the Royal Engineer Office, Grand Depot, Woolwich, between the hours of TEN and FOUR, up to the 29th AUGUST, 1856, inclusive. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Grand Depot, Woolwich,
18th July, 1856.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London district hereby gives Notice that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall-mall, up to 9 o'clock of the 8th of AUGUST next, for BUILDING a STABLE and SUPERVISING a TANK, to contain 150 gallons of water, at the Wellington Barracks, St. James's-park. Printed schedules and forms of Tender may be obtained at the Royal Engineers' Office, No. 1, Somerset Place, Bath-street, between the hours of TEN and FOUR, from the 23rd of JULY to the 8th of AUGUST next inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineers' Office, 11, James-street, Pimlico,
16th July, 1856.

TENDERS are required for the proposed TAKING DOWN, REMOVING, and REBUILDING of a RAILWAY STATION, and the ERECTION of a SHED to same, for the Stockton and Darlington Railway Company, at Stockton-on-Tees. Parties willing to give in Tenders, may inspect the drawings and specifications, on application at the Railway Station, South Stockton, or at my Office in Bradford on and after WEDNESDAY, the 23rd instant, until WEDNESDAY, the 6th day of AUGUST, on or before which day, sealed Tenders are to be delivered at my Office aforesaid. The company do not pledge themselves to accept the lowest or any Tender.

E. MILNES, Architect, Bradford, Yorkshire.

CONTRACTS.

BOROUGH of LEEDS.—WANTED, by the Town Hall Committee of the Council of this Borough, plans, specifications, and estimates for WARMING and VENTILATING the TOWN HALL at present erecting in the said borough. All plans, &c. to be sent to the Town Clerk's Office, not later than THURSDAY, the 24th JULY next, addressed to "The Chairman of the Town Hall Committee—plans, &c. for warming and ventilation." A ground plan of the building may be seen, and any information obtained, at the Office of the Architects of the Work, but the Committee do not bind themselves to adopt the lowest estimate, or any plan which may be sent in.

By order,
JOHN A. IKIN, Town Clerk.

Leeds, June 27, 1856.

WARE LOCAL BOARD of HEALTH.—CONTRACT for PAVING, SUPPLYING MATERIALS, &c.—The Local Board of Health are prepared to receive TENDERS from parties willing to CONTRACT for LAYING DOWN PAVING, CURBING, and other WORKS required in forming Paths, &c. in the Town of Ware, and for supplying best Aberdeen Granite, Curb Stone, and Wick Rockhill Flagging for the same. Plans and specifications may be seen, and particulars and other information obtained, by applying to the Clerk, between the hours of ELEVEN and FOUR. Tenders to be sent to, or delivered at, the Office of the Local Board, at Ware, on or before MONDAY, the 21st of JULY next. The Board do not bind themselves to accept the lowest, or any Tender.—By order,

NATH. COBHAM, Clerk to the Board.

Ware, June 24, 1856.

TO BUILDERS.—The Burial Board for the Parish of Tottenham, in the County of Middlesex, hereby give notice, that they are prepared to receive TENDERS for the ERECTION of TWO CHAPELS, with vestries and lichgate, on their new burial ground adjoining Tottenham Cemetery, in addition, and bill of quantities, will be open to inspection at my house for in the morning of TUESDAY, the 15th, till the evening of FRIDAY, the 25th instant. Copies of the specification, together with a bill of quantities, may also be had on payment of 2s. 6d. or 2s. 8d. if sent by post.—Sealed Tenders, upon printed forms (copies of which and specification, will be received not later than SATURDAY, JULY 26. Any further information may be had on application to the Architects, Messrs. PRICHETT and SON, Darlington.—Recd pt.

W. B. HUNNINGS, Clerk to the Board.

Tottenham, July 9, 1856.

WIGAN LOCAL BOARD of HEALTH.

WATERWORKS.—Contract No. 8.—TO EXCAVATORS, PIPE LAYERS, and OTHERS.—Persons willing to CONTRACT for EXCAVATING, PIPE LAYING and JOINTING WATER PIPES, SLUICE VALVES, HYDRANTS, &c complete, for the Local Board of Health for the district of Wigan, may see the Plans, Specification, and Forms of Tender, at the Office of the Local Board, in Wigan, or at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster, and obtain duplicate copies of the Schedules, Bill of Quantities, and Forms of Tender, on the payment of the sum of Five Shillings, on and after the 16th day of JULY, 1856. Sealed Tenders must be delivered at the Office of the Local Board, Wigan, before TWELVE o'clock, on TUESDAY, the 22nd day of JULY, 1856, indorsed, "Tenders for Pipe-Laying, &c."

By order,
WILLIAM ACKERLEY,
Wigan, June 30th, 1856. Solicitor to the Local Board.

NEWCASTLE-UPON-TYNE. — QUAYSIDE IMPROVEMENTS.—To BUILDERS, CAPITALISTS, &c.—The Corporation of Newcastle-upon-Tyne having purchased, by virtue of an Act of Parliament, the whole of the property on the Quayside, damaged by the late fire, also a large portion of the surrounding property, for the purpose of improving that part of the town, and having laid out the same into several new streets, which, when built, will form the best business-streets in the town, are now prepared to receive TENDERS for the purchase of the whole or any of the SITES on such parts of the interal street, No. 1, and also a great portion of the parallel street, according to plans and conditions approved of by the Council. The great demand for offices, shops, for wholesale and retail purposes, and warehouses, in this particular part of the town will ensure to capitalists a safe and valuable investment. Plans and conditions may be seen on application to the Town Clerk, the Town Surveyor, or JOHN DOBSON, Esq. Architect, Newcastle-upon-Tyne. Tenders, marked "Tenders for Sites on Quayside," addressed to the Town Clerk, will be received until the 28th inst.

N.B.—A large quantity of old building materials on the ground will be sold to such purchaser of sites as may require the same.

TO BUILDERS, CARPENTERS, and OTHERS.—COUNTY POLICE STATIONS.—The Magistrates for the county of Berks are willing to receive TENDERS for the ERECTION of POLICE STATIONS at the several places following, viz.:—

Abingdon,	Newbury,
East Ilsley,	Wallingford,
Farringdon,	Wantage.

Persons desirous of Contracting for the works may see the plans, specifications, and particulars, and obtain bills of quantities, at the County Police Stations, Farringdon, as my Office, Bradford, Reading, and hereinafter specified, viz.:—

Abingdon ..... At the COUNTY GAOL.
East Ilsley ..... At the Office of Mr. HUBERT.
Farringdon ..... At the Office of Mr. GODWIN.
Newbury ..... At the Office of Messrs. GRAY and GODWIN.
Wallingford .... At the Office of Messrs. HIDDENS.
Wantage ..... At the Office of Mr. ORMOND.

after WEDNESDAY, JULY 16th inst. at, between the hours of TEN and FOUR. Separate Tenders for each station, sealed, and properly endorsed, to be sent under cover, addressed to the Chief Constable, Berks Constabulary, Reading, on or before SATURDAY, JULY 26th instant. The lowest Tender will not necessarily be accepted.—By order of the Magistrates,

J. B. CLACY, Architect, County Surveyor.

Reading, July 4, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

THE CONSERVATIVE LAND SOCIETY.—
Trustees.
Vyse and Ruscoe, Esqs.
Right Hon. B. B. R. A. C. N. Hamilton, M.P.
Hon. C. L. Lawrence, M.P.
J. C. Cobbold, Esq., M.P.

TO ROAD CONTRACTORS &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS, DRAINAGE, and FENCING of the COUNTY of SURREY HEATH ESTATE, Tunbridge Wells, Kent. The drawings and specification may be seen at the Offices of Mr. N. E. STEVENS, Architect, Clement's Inn, Strand, London, and of the Surveyor, Mr. GEORGE MORGAN, 3, Norfolk-street, Strand. Letters, addressed after WEDNESDAY, 9th JULY, 1856, between the hours of ELEVEN and TWO, to be delivered at the Office of the Estate, by TWELVE o'clock, on FRIDAY, JULY 25th, to the Surveyor, at his Offices as indorsed "Tenders for Roads, &c. Tunbridge Wells Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN,
38 Norfolk-terrace, Strand, London.

GUILDFORD UNION.—To BUILDERS and CONTRACTORS.—EXTENSIVE ADDITIONS and ALTERATIONS to the GUILDFORD UNION WORKHOUSE.—The Guardians of the Guildford Union, in the County of Surrey, hereby give notice that they are desirous of receiving TENDERS for BUILDING NEW SCHOOL and DORMITORIES, a NEW HOSPITAL and other Alterations in the Workhouse, according to the plans and specifications prepared by Mr. H. HOWELL, Architect of Godalming, Surrey, and of the Norwich Union Insurance Office, Pall Mall, Bridge-street, London. The plans and specifications may be seen at the Architect's Office, in London (entrance, 1A, Union-street, New Bridge-street), after FRIDAY, the 11th JULY inst., and a copy of the bill of quantities, may be obtained from Mr. CHARLES POLAND, Superintendent, Margaret-street, Cavendish-square, upon the payment of 1l. 1s. The Guardians do not pledge themselves to accept the lowest or any of the Tenders. Tenders, indorsed "Building Tenders" must be sent to me by SEVEN o'clock in the evening of FRIDAY, the 25th JULY instant.

By order of the Board,
W. HAYDN SMALLPEICE, Clerk.

Guildford Union, 1856.

THE VESTRY of the PARISH of ST. MARY, LAMBETH, TO SEWER CONTRACTORS and OTHERS.—The Committee for Sewers &c. hereby give Notice, that they are prepared to receive TENDERS for the necessary Contracts, and will be willing to enter into Contract for LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING, Part, or the whole, of the BRICK SEWER, together with other Works in connection therewith, in Norwood-lane, in the Parish of Lambeth, and the maintenance thereof in complete repair, for twelve calendar months. Plans, sections, and a specification of the above works, may be inspected, and a form of Tender and further particulars obtained from Mr. HUGH WINTOUR, Surveyor of Sewers, at the Offices of the Vestry Hall, Kennington-green, between the hours of TEN a.m. and FOUR p.m. where sealed Tenders, addressed to the Clerk of the Vestry, and endorsed "Tender for Works in Norwood-lane," are to be delivered, on TWELVE o'clock on MONDAY, the 28th day of JULY. No Tender will be received after that hour. The Committee do not hind themselves to accept the lowest Tender, and two sureties will be required for due performance of the works.—By order,

THOMAS LOFFEY, Clerk to the Vestry.

Offices, Vestry Hall, Kennington-green, July 17, 1856.

TO BUILDERS and OTHERS. — The Directors of the Commercial Gas Company will meet on FRIDAY, the 1st of AUGUST, to receive TENDERS for the ERECTION of a HOUSE and other BUILDINGS at Sneyd. Plans and specification may be seen, and further information obtained, on application to the Company's Inspector, at the works, between the hours of TEN and FOUR o'clock.

By order of the Board,
GEORGE JAQUES, Secretary.

Sneyd, July 15, 1856.

NORTHAMPTON IMPROVEMENT COMMISSIONERS.—Notice is hereby given, that the commissioners for improving the Town of Northampton will at their meeting to be held at the Guildhall, on WEDNESDAY, the 6th day of AUGUST, at HALF-PAST SIX in the evening, receive sealed TENDERS for the SEVERING, the ROADS, and remaining sewerage works, of that portion of the said town, for the speedy carrying into operation the Act of AUGUST next. Sealed Tenders to be delivered at the Office of the Surveyor, and the persons making such Tenders will be required to attend at the said meeting, if they desire to enter into Contract for the due performance of the contract. The Commissioners do not bind themselves to accept the lowest or any Tender. Specifications, &c. may be seen at the Offices of the Surveyor, Wellington-street, Northampton, on and after the 21st day of JULY, and Tenders are to be delivered to the Surveyor at the Offices aforesaid, on or before TWELVE o'clock at noon of WEDNESDAY, the 30th day of JULY.

THE PUBLIC HEALTH ACT, 1848.—To CONTRACTORS and OTHERS.—The Local Board of Health, [illegible] district of Leamington, are prepared to receive TENDERS for the CONSTRUCTION of TWO COVERED RESERVOIRS and a suitable [illegible] of containing five hundred thousand gallons each. [illegible] LAYING the WATER MAIN [illegible] Leamington without the [illegible] and all necessary and other works connected therewith. Plans [illegible] may be seen, and further particulars thereof obtained, on application to Mr. J. FOX SHARP, Surveyor to the Local Board, at his Office, Town-hall, Leamington, [illegible] Tenders, and Form of Tender may be [illegible] of the Surveyor, at his Office aforesaid, on or before MONDAY, the 28th day of JULY, 1856, to whom Tenders must be forwarded, endorsed "Tender for Reservoirs on Newbold-hill," on or before MONDAY, the 28th day of July, 1856. [illegible] to be bound to accept the lowest or any Tender.—By order,

R. H. DAVIES, Clerk.

Town Hall, Leamington, June 17, 1856.

TO BUILDERS and OTHERS.—Notice is hereby given, that [illegible] CHURCH at ALMSHOUSE, [illegible] to be erected in the Parish of [illegible] Somerset, [illegible] MILLS, of [illegible] on MONDAY, the 28th of JULY, at [illegible] and persons willing to CONTRACT for the execution of the [illegible] WORKS, are requested to send [illegible] Tenders, addressed to Mr. MILLS, [illegible] square, Bristol, on or before 12th of AUGUST next, ensuring the [illegible] Tenders. [illegible] contractor will be required to enter into the usual bond, with two [illegible] sureties, for the [illegible] Works.

TO BUILDERS.—HIGHBRIDGE CHURCH.—Plans and specification for ROOFING of above CHURCH, may be seen on application to Mr. SAMUEL SANDERS, at Highbridge, from WEDNESDAY the 23rd to SATURDAY, the 26th inst.; or at the Office of the Architect, Mr. NORTON, 24, CHURCH-street, Weston-super-Mare, from MONDAY, the 28th, to SATURDAY, the 2nd of AUGUST. All persons wishing to CONTRACT for the execution of the [illegible] WORKS, are requested to send [illegible] Tenders, addressed to Mr. MILLS, [illegible] square, Bristol, on or before 12th of AUGUST next, ensuring the [illegible] Tenders. [illegible] contractor will be required to enter into the usual bond, with two [illegible] sureties, for the [illegible] Works.

TO BUILDERS.—ABERSYCHAN SCHOOLS, PONTYPOOL.—The Iron and Coal Company hereby invite Builders to submit TENDERS for the ERECTION of SCHOOLS, to [illegible] CHILDREN, with TEACHERS' RESIDENCES attached. Plans, elevations, and specifications may be seen at the Office of Mr. ROPER, architect and surveyor, Abersychan, from MONDAY next, and [illegible] TUESDAY, the 29th of JULY, on or after which day Tenders are to be sent, sealed and addressed, to the Architect, Mr. NORTON, 24, Bedford-street, London. The Company is not bound to accept the lowest or any Tender, as the satisfactory to their Architect.

CONTRACTS.

TO GAS CONTRACTORS and OTHERS.—The Commissioners and Contractor for Lighting and Watching the Town and Common with Gas, is willing to TREASPER the CONTRACT to any responsible party or parties who will contract with the necessary works, and erect all the requisite Lamps, Lamp-irons, and a contract has been entered into with the Gas Authorities for lighting the public lights for twenty years at the rate of 7s. 6d. per 1,000 cubic feet. The private consumers will pay [illegible] per 1,000 cubic feet. The price of coke will not exceed 20s. per ton.—Address, C. E. [illegible], Lodgers, Edenbridge, Kent, Post Office.

TO WELL-SINKERS.—VESTRY of CLERKENWELL, PENDLES are invited to SINKING a SHINING WELL, to be situate in Clerkenwell-green, agreeably to a specification which may be seen at the Vestry hall, Upper Rosoman-street, daily, from TEN till TWELVE o'clock. The Vestry do not bind themselves to accept the lowest Tender. Tenders to be sent to the Clerk's office sealed up.

By order, THOS. CROWELL, Clerk.

July 14, 1856.

TO BUILDERS and CONTRACTORS.—Builders selected to CONTRACT for the ERECTION and COMPLETION of a NEW EXCHANGE and MARKET-HOUSE, as proposed to be built in the Long Sale Ring in the County of Lincoln, can now see the drawings and specifications at the Office of Messrs. MOSSOP and WRIGHT, Solicitors, Lincoln, until the 26th instant, inclusive, and from the 17th to the 26th, inclusive, at our Offices, Spalding, between the Hours for such like plans, &c. to be left. Tenders to be addressed "Tenders for Corn Exchange and Market-house" to be delivered at the Offices of Messrs. MOSSOP and WRIGHT, Solicitors, Lincoln, on or before the 28th instant, not later than ONE o'clock, p.m. The Purchasers do not hold themselves to accept the lowest Tender.—By order,

BELLAMY and HOLT, Architects and Surveyors.

Offices, 16, Bridgate, Lincoln, July 11, 1856.

TO CONTRACTORS.—The Council of the City of Worcester acting as the Local Board of Health of the said City, hereby give Notice that they are prepared to receive separate TENDERS for the FOUR following intended CONTRACTS for WORKS:—

1. IRON PIPES, from 24 inches diameter, downwards (about 17 miles).
2. PIPE LAYING, about 17 miles.
3. TWO STEAM ENGINES and other APPARATUS.
4. SEWERS and WORKS connected therewith, about 15 miles.

Drawings and specification may be inspected by Mr. HAWKESLEY, Civil Engineer, Great George-street, Westminster, and may be seen at the Town Clerk's Office, Guildhall, Worcester, where bills of quantities and other particulars may be obtained, on and after MONDAY, the 21st day of JULY instant. Sealed Tenders, addressed to the Clerk of the Local Board, Guildhall, Worcester, under cover, must be delivered at the SAVOY-HALL, Worcester, on the 2nd day of AUGUST next, at one o'clock precise, when the Council will accept the lowest or any other Tender or Tenders.

Guildhall, Worcester, 10th July, 1856.

PIRACY of the MARKS of MOSELEY and SON.

"London, June 11th, 1856.

"Messrs. MOSELEY and SON, of London, having filed a Bill in Chancery against me, praying an injunction to restrain my selling their name and trade mark thereon, not made by them, and I having purchased the same in ignorance thereof, hereby express my regret at having done so, and of using such spurious articles, and undertake to cease such name and mark from all places on my premises, and not to use any plates so marked, engraved, and I agree to pay the costs of the said suit.

"Dated this 11th day of June, 1856.

"Witness, J. G. Lewis, 8, Leicester-place." "RALPH LAZARUS.

CAUTION.—We do hereby give notice, that legal proceedings will be forthwith commenced against all persons who shall strike any mark or marks referred to in the bill as used by us, and also against all parties who shall sell plates or other articles of cutlery, as Cutlery Manufacturers, 1, and 3, Newstreet, Quadrant, London.

ESTABLISHED 1810.

WILLIAM HARMER'S SMITHS' WORK, STOVE and RANGE MANUFACTORY, and IRONMONGERY, METAL, and ZINC WAREHOUSES, 19, Horseferry-road, and 1 New Peter-street, Westminster.

WARMING and VENTILATING.—ALFRED MAY begs to call the attention of Architects, Builders, and others to his system of WARMING by HOT WATER, Lunatic Asylums Workhouses, Churches and other Public and Horticultural Buildings, Mansions, and Offices.

A. M. having had great experience in the above, is enabled to guarantee the efficiency of such work as may be intrusted to him, by those persons he has just completed, to the entire satisfaction of the such testa; the warming and ventilation of the Baron's and Sir Anthony Rothschild's new mansions and conservatories.

Manufactory, Eagle-court, Dean-street, Holborn; and at 50, Dover-street, Piccadilly.

A Patent for tapping for drying linen on a very economical and effective system.

GERISH'S PATENT HARDENED PIVOT STRAP HINGE.

Suitable for Gates, Doors, &c. &c.

Architects, Builders, and the Trade in general, will find this a superior article, both in quality and cheapness, to any hitherto offered to the public, carrying the heaviest weight with the greatest ease, and no king-bolt or hardened pivot required to run double. The Hinges are made from 6 inches to 40 inches long, and in every variety of pattern.—Lists of Prices may be had of the Patentee and Manufacturer, F. W. GERISH, Eagle-road, Cityroad, London; and of all Factors and Ironmongers in the United Kingdom.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be hung off and replaced in an instant. Rising and double acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth," Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO ARCHITECTS, &c.—The IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most efficient yet invented, is made by J. SMITH, of 16, Queen-street, Oxford-street, near Argyll-street, where a working model can be seen or will be sent for inspection at the shortest notice.

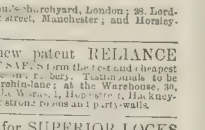
N.B.—Espagniolette Bolts of a superior quality, at reduced prices.

IRON CHURCHES, STORES, &c.—For SALE, Substantial Corrugated Iron Stores, Churches, Dwelling-houses and every description of Buildings, adapted to all climates. Iron Roofs constructed for all parts of the world. An Iron Church of 600 sittings, complete for hire or sale.—To be viewed, or further particulars apply to SAMUEL HEMMING, Cliff House Works, Bow, London.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure locks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 35, High Holborn.

CONTRACTORS requiring CASTINGS, WROUGHT IRON GIRDERS, &c. with despatch, and punctuality, MATTHEW T. SHAW has such arrangements that deliveries are made in a few days. Contractor for Plant and Store of every description. 64, CANNON-STREET.



TO CONTRACTORS and BUILDERS.

WROUGHT-IRON GIRDERS for BRIDGES and BUILDINGS, manufactured and guaranteed as to strength.

CAST IRON GIRDERS for BRIDGES and BUILDINGS.

CAST IRON COLUMNS of every description.

WROUGHT-IRON PLATE GIRDERS, for trussing between timber.

Orders executed in three days.

SCREWS, BOLTS & NUTS, SPIKES, RIVETS, CUT-NAILS, Wrought ditto, SCREWS, BOND HOOPS, CHAIN, &c.

CONTRACTORS' PLANT, RAILS, EARTH MOVING and IRON WORK, for Works Abroad, &c.

MATTHEW T. SHAW,
64, CANNON-STREET (late with C. J. Mare and Co.)

WROUGHT IRON GIRDERS, Steam Boilers, Gas Holders and Gas Apparatus, General Castings, Columns and Roofing, Iron Work, Manufactured by M. SUTCLIFFE and SON, Bow Works, Tarrant, near the London Docks, E. Hatt-street.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had of CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 9, Market-street, Manchester; and Horsley-hill, Wednesbury.

JOHN TANN'S new patent RELIANCE Locks and FIRE-PROOF SAFES are from the best and cheapest sale in the world against housebreakers. Detailed lists to be had of Messrs. Waterlow, Birchin-lane; at the Warehouse, 30, WILLIAM-STREET, City; and at the Works, Hackney-road, London. Iron Doors for strong rooms and party-walls.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition 1851, and the same distinction has been awarded to Messrs. Bramah and Prestage, for the Stock of their Locks of all descriptions; Coins, Glass, and Wood Fasteners of all kinds, with Patent shifting Spindles; Dr. Arnott's Ventilator, 18s.; and the new registered Venetian Ventilator, which admits light, &c. 9d. each.

BRAMAH and PRESTAGE, 124, PICCADILLY, and BOOBBYER, established nearly 50 years, for the supply of Goods from the best Manufactories, at the lowest prices.

124, Stanhope-street, Clare-market, London.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—35 and 36, High Holborn.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	1¼	7s. 6d.
17	1½	7s. 6d.
16	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by a tooling at intervals of 1¼ inches, and turning one side of each alternate succession in a contrary direction to the reverse series of the iron, thus forming REVERSED CLAWS, which have at least their first bend crain of the iron is presented longitudinally, and when become when built into the brickwork, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of everyone.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 19, York-buildings, Adelphi.

FOUNDRY AND IRON WORKS,

65, DRURY-LANE, and CHARLES-STREET, DRURY-LANE

GLOVER, BROS.,

solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornaments Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and O G Gutters. Air bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors Book safes and Strong Rooms, Tanks and Boilers, and every description of Ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,

162, DRURY-LANE, and CHARLES STREET.

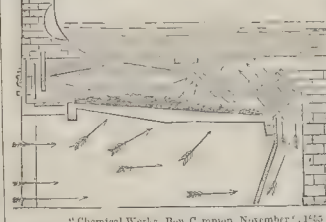
London.

VANES, CROSSES, &c.



First-class Prize Medal, Paris Exhibition, 1855.

Specimens at the Hardware Court, Crystal Palace, Sydenham. Illustrated Price-list free on application.

LESS FUEL, MORE STEAM, NO SMOKE.

GARDNER'S PATENT SMOKE CON-

SUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 1, 1855

"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patent apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I now have to state that we are enabled without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coal. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.

"I remain, dear Sir, yours truly,

"To E. V. GARDNER, Esq." "FREDK. ALLEN.

Apply to the PATENTEE, 84, Norfolk-street, Middlesex Hospital; or to Messrs. BEARDOW and BEALY, 113, Great-street, Fleet-street; or Z. D. BERRY, Albion Works, Victoria-road, Pimlico.

Bakers' Ovens fitted for 5l. license included.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY,

PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

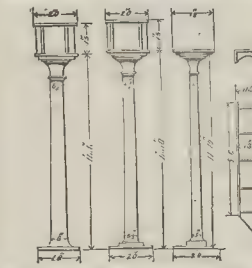
UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

WOOD-CUTTING MACHINERY,

JOHN M'DOWALL and SONS,



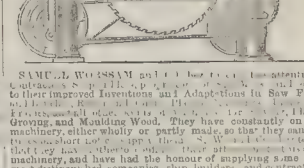
WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow,

MANUFACTURERS OF VERTICAL SAW-FRAMES

(driven by steam).

For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.

Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached; circular cross-cut radial sawing machines; patent inward and outward cross cut sawing machines, for heavy timber; planing machines, for working boards from a ½ of an inch thick to 6-inch deck plank; revolving cutters, for squaring and shaping heavy timber, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power mortising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; sanded board machines, for hat-boxes, &c.; patent silent feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr M'Dowall is the inventor and sole maker of the best improved vertical saw-frame for cutting the heaviest timber, and for the last 24 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders he has had (as well from the British and other European Governments and private establishments in almost all parts of the world, and from their large and commodious premises, and first-class plant made for every department of the work with great speed, the largest contracts can be executed with a regularity, accuracy, and despatch, which could not be excelled by any other firm in Europe. Applications as above for further particulars, will be promptly attended to.



TO ARCHITECTS and BUILDERS,—TO

BE SOLD, a rare Bargain, together or separately, 78 CAST-IRON COLUMNS, 9 inches in diameter, 9 feet 6 inches high, and 9 inches in diameter, 10 feet 6 inches high, of each size, adapted for a warehouse of three floors, or for any other purpose. For particulars apply to WARNERS and LOVEDAY, Auctioneers, 61, Cannon-street, London.

MACHINERY for SAWING, PLANING,

MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Cabinet Makers, Builders, Engineers, Shipbuilders, and others, to their improved Inventions and Adaptations in Saw Frames, Planing, Moulding, Tenoning, Mortising, Dovetailing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times execute orders at short notice. Working drawings and estimates of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in Europe; also by eminent Contractors, Builders, Shipwrights, Machine-makers, and other workmen in wood. Their machines are in every respect perfect, either for home and foreign use. One of their Saw Benches and also a smaller one, with Boring Apparatus, &c., are now at work at the Great Exhibition.

A descriptive Catalogue, with Drawings, may be had on application.

KING'S ROAD, Chelsea.

PATENT MACHINES for WORKING in

WOOD.—These celebrated Machines have been awarded a prize medal at the Great Exhibition, 1851, and have also been awarded by the Juries, Members, and Exhibitors present from all parts of Europe; also by eminent Contractors, Builders, Shipwrights, Machine-makers, and other workmen in wood. Their machines are in every respect perfect, either for home and foreign use. One of their Saw Benches and also a smaller one, with Boring Apparatus, &c., are now at work at the Great Exhibition. [illegible] Working drawings and estimates of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in Europe; also by eminent Contractors, Builders, Shipwrights, Machine-makers, and other workmen in wood. JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system which give superior tone and facility for ringing.

AT the LOWEST PRICES.—SAMUEL PUTNEY invites the attention of buyers to his large and well-selected Stock of the various descriptions of Deals, commencing at the following low prices:—

Yellow Deals, from	£20	0	per 120
Spruce ditto, from	16	0	"
Yellow Battens	12	0	"
Dry Pine Plank, from	22	10	"

Prepared Flooring, &c. at equally low prices. A list forwarded on receipt of a postage stamp.—N.B. All sawn goods delivered within two miles free of cartage.—Borough-road, Southwark, and Elm-street, Gray's-inn Lane.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

MACHINE CARVING WORKS (Patent).
Ecclesiastical and every other description of CARVING. A magnificent Gothic Screen, Carved Glass Frame, and other specimens. Tables, Chairs, Lecterns, &c. Designs and estimates at the Works, Belvedere-road, Lambeth, foot of Hungerford-bridge.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shop-fitters to his carefully selected MAHOGANY, suitable for Counter Tops, and to his seasoned Materials for builders, cabinet and blind makers, &c. Delivered, cartage free, to any of the London railway stations, or within three miles from Kennington Church.

MAHOGANY and WAINSCOT seasoned by Symington's New Patent Process. JOHN COUMBE solicits an inspection of his stock. The above process enabling him to season his wood in a comparatively short space of time, he sells at prices generally charged for wet wood.—Address, PATENT WOOD SEASONING WORKS, Lady Lake's-grove, Mile-end-gate.

ANOTHER GREAT REDUCTION.—Yellow Deals, 3s. 3d.; Pine Plank, 3s. 6d.; Spruce Deals, 3s.; Mahogany, 6d.; 24 Yellow Battens, 12. 10s.; F. Walnut, 7d. Cartage free in town.—T. FORMAN, 1, Walnut-tree-walk, Lambeth-walk.

NOTICE of REMOVAL.—EDWARD SIMMS begs to inform his customers and friends that he has REMOVED his business from Wilton-road, Pimlico, to the KING'S-ROAD, CHELSEA, where their orders will be promptly executed as heretofore.—Please address, E. SIMMS, King's-road, Saw-mills, Chelsea, opposite Manor-street.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory the first of its kind ever established, a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned and ready for use, from ¼-inch to 1½-inch thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses. Slating Battens, Pantile Laths, Oak Sills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

MOULDINGS BY MACHINERY.
Capping, Sash-bars, Beads, &c. to any Design, carefully packed and sent to all parts of the Country. A Pattern List sent on application to
E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
KING'S ROAD, CHELSEA.

ACORN TIMBER WHARF and SAW MILLS,
CANAL BRIDGE, OLD KENT-ROAD, LONDON.
A Monthly Price Current forwarded on application.
RICHARD MAY, Proprietor.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER KNIFE-CUTTING MILLS, Commercial-road, Lambeth. The Proprietors beg to announce to the Trade that they have completed their extensive arrangements, and will be happy to execute all orders entrusted to their care with dispatch and punctuality. Wet and dry docks, and powerful cranes for landing heavy goods, offer facilities not to be obtained elsewhere. A large assortment of seasoned prepared flooring match boarding, &c. &c. always in stock at reduced prices.

SUN SAWING, PLANING, and VENEER-CUTTING MILLS, Canal-road, Kingsland-road.—A. COX and SON beg to call the attention of Builders, Timber Merchants, and the Trade in general, to the above Mills, and to inform them that they are now prepared to execute any amount of work with promptness and despatch, at the lowest possible prices. Full particulars may be obtained on application by post or otherwise.
The Premises abut on the Regent's Canal, and afford every facility for landing and piling goods.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. An extensive stock of Dry White Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths Oak Sills, Sash Sills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

FLOOR BOARDS, &c.—R. SLADE begs to inform Builders and the Trade, that he has now on hand a large assortment of FLOORING and MATCHED BOARDING, from ¼ inch to 1½ inches thick, seasoned, and ready for use; also, Mahogany, Moulding, Wainscot, and all kinds of Timber required for Building purposes.—Address, R. SLADE (late E. Simms), Flooring Manufactory, Wilton-road, Pimlico.

A SUBSTITUTE FOR PAINT, AND AT HALF THE COST.
STEPHENS' DYES or STAINS for WOOD:
The following extract from a letter the Proprietor has obtained leave to make public:—"Northgate, Colchester, Feb. 5, 1855.—Sir,—I have just finished a new church with your Oak Stain, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.—I am, Sir, your obedient servant,
"SAMUEL GRIMES, Builder.
"To Mr. Henry Stephens, 54, Stamford-street, London."
Samples and prospectuses free to any part of the kingdom.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, Old St. Pancras-road.—GEORGE NOKES and CO. invite the attention of Builders and the Trade generally, to their STOCK of DRY FLOORING, at the following prices, for cash:—
¼-inch white, 13s. 6d. per square; ¾-inch white, 15s. per square; 1-inch white, 18s. per square; 1-inch yellow, 15s. per square; ¾-inch yellow, 16s. 6d.; 1-inch yellow, 20s.
Timber, deals, planks, &c. at the lowest remunerative prices. A liberal discount allowed on mouldings for exportation. Book of designs forwarded on application.

IMPORTANT to BUILDERS and PAINTERS.—Genuine White Lead, 23s. per cwt.; Linseed Oil, 3s. per gallon; Boiled Oil, 3s. 3d. per gallon; Turpentine, 2s. 7d. per gallon;

RAILWAY ACCIDENTS ALONE
may be insured against by the journey or by the year as heretofore.
Railway Passengers' Insurance Company, empowered by a Special Act of Parliament.
WILLIAM J. VIAN, Secretary
Offices, 3, Old Broad street, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

Second Edition, with Ten Thousand Additional Words, price 12s. 6d. cloth

THINGS NOT GENERALLY KNOWN, FAMILIARLY EXPLAINED. A Book for Old and Young.
By JOHN TIMBS, F.S.A.
"A remarkably pleasant and instructive little book; a book as full of information as a pomegranate is full of seed."—*Punch.*
"A very amusing volume, and as instructive as it is amusing."—*Notes and Queries.*
"Every reader of this book will find that a good idea has been cleverly carried out."—*Tait's Magazine.*
DAVID BOGUE, 86, Fleet-street.

Fourth Edition, with Additions, post 8vo. 7s. 6d.

THE PRINCIPLES of HYDROSTATICS; an Elementary Treatise on the Laws of Fluids and their Practical Applications.
By THOMAS WEBSTER, M.A. F.R.S. Trin. Coll. Cambridge.
By the same Author, 8vo 9s.
The THEORY of the MOTION and EQUILIBRIUM of Fluids.
London: JOHN W. PARKER and SON, West Strand.
Cambridge: DEIGHTON.

Forwarded on receipt of thirty postage stamps,

ARCHITECTURAL BOTANY; setting forth the principles of Symmetrical Construction in Foliage, Flowers, Fruit, &c. with Practical Applications to Decorative Designs for Cornices, Spandrils, Crosses, Corbels, Capitals, Bosses, Panels, &c.
By W. P. GRIFFITH, F.S.A. F.L.S. &c.
Author of "The Botany of Creation," &c.
Published by the Author, 4, St. James's-square, London.

The Second and Concluding Volume of Dr. Doran's
THIRTEENTH VOLUME of HOUSEHOLD WORDS, conducted by CHARLES DICKENS.
Complete sets of Household Words may always be had either in Weekly Numbers, Monthly Parts, or in Half-yearly cloth Volumes.
Office, 16 Wellington-street North. Sold by all Booksellers.

TO MEMBERS OF LAND SOCIETIES
Now ready, with upwards of Forty Plates, price 5s. or post free, 5s. 6d.

DESIGNS, SKETCHES, and PLANS, for VILLAS, with specification and Estimates of Cost.
By GEO. WM. ROBINS, Architect.
"This work is admirably adapted for the use of persons engaged in building: is highly illustrated with a variety of Designs for Ornamental Villas and Cottages."—*Bell's Weekly Messenger.*
London: J. R. HALE, 6, Tavistock-row, Covent garden; or by post from the Author, Lea-bridge-road, Leyton, Essex.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Duke-lane, St. Clement's, Strand.

FREEHOLD GROUND, CHANCERY-LANE. The Commissioners of Sewers of the City of London hereby give Notice, that they will MEET in the GUILDHALL of the said City, on TUESDAY, the 22nd of JULY next, at TWELVE at Noon precisely, to receive PROPOSALS for taking on BUILDING LEASE for EIGHTY YEARS, at a Ground Rent certain, PLOTS of GROUND, situate on the west side of Chancery-lane, and near Fleet-street. Further particulars may be had, and plan seen, on application to Mr. HAYWOOD, Engineer to the Commission, at the Sewers Offices in the Guildhall, where forms of proposals may also be obtained. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for their approval, and do not hold themselves to accept any proposal unless deemed advantageous. Persons offering proposals must attend on the above day, and the party whose proposal is accepted will be required to execute an agreement at the time.
JOSEPH DAW, Principal Clerk.
Sewers Offices, Guildhall, June 3, 1856.

FREEHOLD LAND TO BE LET, on the River Thames, between the river and the Victoria Docks, being very near the new entrance, on building leases for ninety-nine years. This land has not only the advantage of river frontage but it is bounded on the land side by a branch of the Eastern Counties Railway, into which sidings can be made. Plans of the property may be seen, and particulars had of Mr. JOHN OAKLEY, Land Agent and Surveyor, No. 60, Coventry-street, and of Messrs. KINGSFORD and DORMAN, Solicitors, No. 53, Essex-street, Strand, London.

FREEHOLD BUILDING LAND at Norwood, Anerley-avenue, and Palace-road Estates—TO BE LET, or SOLD, eligible BUILDING SITES in close proximity with the Crystal Palace and its railways.—At Hackney, within three minutes' walk of the Victoria-park station for ninety-five years at FORTY PLOTS, at ground-rents from 15s. per plot per annum upwards, being nearly equal to freehold. Roads and sewers on all the estates complete and liberal advances to responsible builders.—Apply to Mr. JAS. BRAGG, Devonshire-wells, Rotherhithe, at No. 68, Stanstead-terrace, Edgware-road; and Valecottage, Anerley, near the land opposite the Crystal Palace Railway station.
N.B.—A Plot of Freehold Land, in an eligible situation, with about 200 feet of building frontage to be Let for two years at one shilling per foot per annum, nearly 200 feet deep, with privilege of purchasing the freehold.

FREEHOLD PLOT of LAND TO BE SOLD, situate at Peckham rye, in the county of Surrey, five miles from the City, containing a little over eight acres beautifully situated, lying high, and commanding extensive views of the surrounding country. Good road drainage, and can be well supplied with water. Suitable for the erection of a public school, or other building; or for a pair of semi-detached villas, requiring good pleasure and garden grounds. For particulars, apply to Mr. W. H. SKYRING, Coal and Corn Offices, City.

REIGATE.—Sixty-four ACRES of excellent LAND Freehold, within a ring fence, and in the proximity to the Junction of the four railways. This estate comprises a substantial stone and brick house with garden and fruit orchard, coach-house, &c. two parcels of capital grass land, and the surface undulating, lying chiefly on the slopes of a gentle eminence and commanding extensive and beautiful views over Gatton park and woods, and the rising Surrey Hills beyond. A belt of young fir shelters the north and east side. Its salubrity is well known and has been attested by the report of the Registrar-General, consequently it is admirably adapted for a public institution or other genteel element, as well as for private residence, where health is a consideration. There is an abundant supply of pure water, and the soil and subsoil are very great. A thick stratum of building stone underlies a considerable part of the estate, and there is also marl in one field at about five acres of excellent brick-earth. The Reigate Junction station, which is only two yards off, presents unrivalled facilities, as 52 trains arrive and depart daily from the various parts of the east, west, north, and south, and the communication with London is performed in about thirty-five minutes. It may be safely said that no situation near London combines in so large a degree the advantages of convenience and healthfulness. Land in this neighbourhood is in great and increasing demand, that in proximity to the station at this moment is limited in extent, and is let or sold. Further particulars may be had of Messrs. SCOTT and PEARSON, Solicitors, Reigate; or the Property will be sold privately on application to be made to R. ALSOP, Esq. 1, Royal Exchange-buildings, or to Mr. WM. J. CONNOR, Estate Agent, Reigate.

NEW WINDSOR ESTATE.—Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences with Stabling, which are much needed in this beautiful locality. The situation is the finest in or near Windsor, adjoining the Park and Long Walk, and commanding a splendid view of the Castle. Within ten minutes of the Great Western and fifteen minutes' walk of the South Western Railway Stations. Apply to Mr. W. H. DEVEY, Civil Engineer and Surveyor, Stratford, or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

STRATFORD, ESSEX. — FREEHOLD LAND, within three miles of London, exempt from land-tax and free of tithe. TO BE LET on Lease, for a long term of years, in large or small plots, suitable for manufacturers or building purposes. Apply to Mr. W. H. DEVEY, Civil Engineer and Surveyor, Stratford, or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

FINCHLEY.—LAND fronting the Regent's Park road, and East-end road, TO BE LET on Building Leases for ninety-nine years, with power of extension, in Plots from one to four acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. H. HINXMAN, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, Solicitors, Lincoln's-inn-square.

ALDERSHOTT.—An eligible BUILDING ESTATE, that is to say, 40 acres, in the immediate vicinity of the Queen's Encampment recently formed. To be SOLD by auction, in lots for the convenience of purchasers, in the course of the ensuing month. The main road passes through the land. Purchase-money may remain on mortgage, if required.—Apply to Mr. W. C. BIRCH, Architect and Surveyor, 16, Essex-street, Strand, and Farnham, Surrey.

FARNHAM, SURREY.—TO BE SOLD, an old established BUILDING YARD with upper part in Lodge and extensive detached premises in the centre of the town of Farnham, and a number of Cottages in the Hop and Barracks at Aldershot. The property is freehold, and possession may be obtained immediately.—For particulars, apply to Mr. W. C. BIRCH, Architect and Surveyor, 16, Essex-street, Strand, and Farnham, Surrey.

WATERSIDE PREMISES between Waterloo and Blackfriars-bridges, with an area of about 1500 feet, an unrivalled position for the timber trade, wharf, and a frontage communication with the Commercial-road.—To Merchants, Coopers, Shipbuilders, Merchants, and others. This important Property TO BE LET on Lease for the term of twelve years, together with the Buildings and Machinery thereon. It presents a valuable opportunity for the carrying out of any extensive undertaking of steam power, and the building of ships is required. The Lessee will have the power of erecting Warehouses adapted to his requirements, agreeing to adhere to covenants with the option of purchase during the term.—Apply to Mr. CHARLES PEATY, Estate Agent, Auctioneer and Surveyor, 11, Sherborne-lane, City.

TO TIMBER MERCHANTS, BUILDERS, MANUFACTURERS, and OTHERS.—TO LET on LEASE, EXTENSIVE PREMISES, near Mile-pond Hospital, consisting of a large Dwelling-house, Workshops, large Yard and Offices.—Apply to J. BALLINGALL, 34, Brook-street, New-road.

TO CAPITALISTS

TO BE LET for BUILDING, in the first instance about EIGHT ACRES of GROUND, admirably adapted for the formation of a Marine Watering-place, on a much frequented part of the boast of South Wales. A good road has recently been made to the property, which is situated about six miles from a large town and station on the South Wales Railway. It contains excellent quarries and springs of water, the bathing is good, and the scenery is celebrated for its beauty. The deficiency of a watering-place upon this coast has long been felt by the numerous families that resort to it from the whole west of England. Distance from London by railway about six and a half hours.—For particulars apply by letter only, to S. T., at Mr. Calder's Library, 1, Batt urst-street, Hyde-park gardens, London.

REGENT'S-PARK.—AS STUDIO, a lofty Room, with Residence. TO BE LET, well calculated for music lessons, artists, or manufacturing purposes, recently fitted up with gas and other conveniences. For particulars and orders to view, apply to Mr. LEREW, Auctioneer, Cardington street, Hampstead road, near the Euston Station.

TO BUILDERS and OTHERS.—WANTED, to PURCHASE a VILLA or COTTAGE RESIDENCE, with a Garden. It must contain two sitting-rooms and four or five bed-rooms, and within twenty miles of London.—Particulars to be sent to Mr. JOHN TOZER, Auctioneer, 14, Walbrook, City.

BUILDING LAND TO LET.—A PLOT of FREEHOLD GROUND, of about two acres, situate about 2½ miles south-west of Hyde-park corner, having a frontage to a street, TO BE LET, for the erection of a school, institution, chapel model lodging-house, or other large building, the same not being a factory or a nuisance to the surrounding houses.—Address, VITRUVIUS, 9, Parliament-street, Westminster.

GROUND-FLOOR, Hanover-street, Hanover-square, TO BE LET, suitable for architects, artists, or other professions; comprising two front offices, and large room behind; now used as a picture-gallery.—LAHEE, 65, New Bond-street, agent also.

BEAUTIFUL VILLAS, delightfully situated, with splendid views, in the Lawrie-park, TO BE LET. They are fitted up with every modern convenience, are well drained, and within a few minutes' walk of the Sydenham Railway Station.—Apply to Mr. W. WEST, Rock Cottage, Sydenham.

WANTED to PURCHASE, a BUILDING SITE or PREMISES in London, west of Temple-bar (either freehold or long leasehold), or near a leading thoroughfare in a central situation, suitable for a charitable institution.—Letters (post paid), stating full particulars, to be addressed to Mr. E. GOULD, 8, Craig's-court, Charing-cross.

WHARF PREMISES TO LET for Sawmills, or Engineers or Builders, with 8-horse engine and boiler sheds and counting-house; also adjoining, a house fitted up for three horses, carts, &c. with all requisite stabling. The Regent's Canal, 100 Loads of Ceiling Lath for Sale, price 23s. per load, net.—Inquire of T. N. Norway Wharf, Hertford road, Kingsland-basin.

HAMPTON COURT.—About Eight Acres of BUILDING GROUND TO BE LET, on 99 years' lease, or SOLD, in small or large plots, near the above Palace and Railway, at moderate prices. An advance of say 5 per cent on the outlay would be made to responsible parties taking a considerable frontage.—For terms, &c. apply to Mr. F. LEET, Architect, Essex-street, Strand.

TO UNDERTAKERS, CABINET-MAKERS, and UPHOLSTERERS.—WEYMOUTH.—TO BE DISPOSED OF, the above line, a highly respectable BUSINESS, many years established, in the fashionable and daily improving seaport. The concern being resigned in consequence of the decease of the late proprietor affords a desirable opportunity to any young man with capital and energy, being capable of considerable extension and improvement.—Apply to Mrs. C. HANCOCK, Executrix, 32, St. Thomas-street, Weymouth.

TO FURNISHING IRONMONGERS, WHITESMITHS, BELLHANGERS, GASFITTERS, &c. TO BE DISPOSED OF, forthwith, an ELIGIBLE CONCERN, in the above trades, with convenient work-shops and good trade accommodation, in a populous village, about twenty miles from London, in an excellent neighbourhood, with a prospect of immediate railway extension, and a consequent increase of building. To the first instance address letters of inquiry to A Z, care of Mr. WARKLIN, Stationer, No. 31, Farringdon-street, London.

BUILDER'S BUSINESS for DISPOSAL. TO BE DISPOSED OF, by order of the Executors, an old established BUSINESS, with a first-rate connection, situate in a small market town about twenty miles from London. The whole has been conducted by the late proprietor for a long period, and has gained for the concern a high reputation, they have included the erection and restoration of the churches and schools of others, both of a substantial and ornamental character. The premises are very complete in their arrangements: the rent nominal, and the stock well selected. The amount required will be from £1,200 to £1,500. There are several advantageous contracts in hand, which will be included in the purchase. The business has been conducted by the late proprietor and his ancestors for more than half a century, and to any practical man of business a more favourable opportunity can rarely be met with. For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO PLUMBERS, GLAZIERS, and OTHERS. TO BE DISPOSED OF, an old-established BUSINESS in the above trades, lately carried on for many years by the late proprietor for nearly forty years; offering an eligible opportunity to any one again wishing to commence. For particulars apply to Mr. MANSELL, Auctioneer, &c. 8, Cement's-lane, Lombard-street.

TO PLUMBERS, GAS-FITTERS, and OTHERS.—TO BE DISPOSED OF, the BUSINESS of an HYDRAULIC ENGINEER, established nearly twenty years, in good repute, and with a tolerably extensive connection. The premises are in a first-rate situation at the West end of London, and are well arranged for the business. Coming to, and for further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO CARPENTERS, BRICKLAYERS, and OTHERS.—AUCTION BUSINESS, with a capital Building Speculation and Jobbing Business.—An active party with capital may purchase or join the same. Building up-wards of 150 freeholds, and constantly employed for the last few months. Coming to, and for further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

ARTESIAN WELLS, Boring for Water, Sinking Pumps, &c. The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers of every description, may be supplied with any quantity by DAVID GREENLEES, Civil Engineer and Patentee of Boring Tools, 10, Charing-cross, Pedlar's-acre. Pumps and machinery for raising water from deep wells, boring tools, and well-pipes for exportation. Mines and Tools supplied to more for railroads, minerals, &c.

The Builder.

VOL. XIV.—No. 702.

DURING the week, we have been requested to give some further information as to the actual state of the case with respect to the new Westminster Bridge, and willingly comply. On the 31st of March last, the Chief Commissioner of Works and Public Buildings requested Mr. Rendel and Mr. Simpson, engineers, to report to him on the works of New Westminster Bridge. The instructions were in the following terms:—

"The first Commissioner requests that you will report to him on the following points:—

1. The cost of the works up to the date of your report, or as near to that period as you can.
2. The progress which has been made in the work.
3. The time in which the first half of the bridge may be made ready for traffic.
4. The time necessary for the completion of the whole structure, and its probable cost under existing circumstances (also the probable cost of suitable approaches).
5. Your opinion as to the original scheme, and the exact nature of that scheme; and,
6. The desirability of proceeding with it.

Should your opinion be unfavourable to the prosecution of the present plan, I have to request that you will set forth most fully the reasons which induce you to arrive at such a conclusion, and that you will advise as to the course which you think it would be most desirable to adopt, taking into consideration all the various circumstances of the case, and bearing in mind that the object to be attained is to have a bridge of a permanent character."

Their report, dated June 28th, is now printed, and shows, with reference to the first inquiry, that the sum of 76,988*l.* 12s. 9d. had been paid on account of the new bridge up to May 31st, and that the works done, materials delivered, and plant, amount in value to 85,009*l.* 1s. As to inquiries 3 and 4, they consider that the first section now in progress will demand at least eighteen months from the resumption of the works, and the completion of the second section not less than four years from the opening of the first. The cost of completing it, in addition to what has been already paid, they put at 200,000*l.*; and the cost of approaches, including 70,000*l.* for property already belonging to the Bridge Estate, and 170,000*l.* for clearing away the block of houses on the south side of Bridge-street, at 384,800*l.* In reply to No. 5, they describe at some length the nature of the scheme, and arrive at the conclusion that it is defective in many of its details, especially in the construction of its piers below water. As to the desirability of proceeding with it (inquiry 6), they say the total loss which abandonment of the plan would occasion, would be about 42,000*l.* To found the piers of the bridge as now arranged, 85 feet wide, in the clay, and provide a temporary bridge, not contemplated in the present arrangement, would make the cost of the bridge above what has been paid, 304,000*l.* the cost of the approaches remaining the same. They then, however, go on to suggest that a diversion of the traffic is desirable, and recommend the construction of a second bridge from the Horseferry-road to Church-street, Lambeth, 60 feet wide, and the reduction of the new Westminster-bridge to that same width. The cost of this second bridge and approaches they estimate at 415,000*l.* The saving in Westminster-bridge and approaches by the reduction of width, is called 170,000*l.*; and placing this sum to the credit of Lambeth-bridge, together with the estimated cost of a temporary bridge then not required, would reduce the cost of Lambeth-bridge, they say, to 210,000*l.*

Let us look back to the objections which Messrs. Rendel and Simpson take to the present scheme. The new bridge is to occupy the site of the existing bridge, but is to be double the width. The addition, our readers will remember, is wholly on the south side; and this section is being built first in order to avoid the necessity for a temporary bridge, pending the construction of the other half of the new bridge on the site of the old.

"Again: the present scheme is devised with a view to the avoidance of the use of cofferdams or caissons for founding the piers and abutments. This is done by forming the piers below low water of a series of wooden piles, surrounded by a sheeting of cast iron, the space inclosed by this sheeting being filled in with concrete.

With a view to prevent the cast-iron piles being laid bare by the scour of the river beyond a fixed limit, namely, three feet below low water, it is proposed to surround them up to that height with a bank of concrete; and in order to guard the piers, masonry, as well as cast-iron piling, from accident by the fouling of barges, steamers, or otherwise, they are to be protected by floating fenders or booms."

On examination of the mode of construction, they consider that the foundations, on which the permanent character of the bridge will rest, are dependent on the combined action of several classes of materials, differing in their strength, as well as in the manner in which they are applied. Farther, the strength of each part is liable to suffer by the failure of any one, and in especial the fracture or the improper execution of any portion of the outer cast-iron casing might be productive in the end of very serious results. In fact, they say, supposing the principle on which these foundations are constructed to be a sound one, it is one that peculiarly requires a cofferdam; for this alone would ensure that careful supervision which is demanded by a class of work dependent for its permanence on its faultless execution. Again, they think it probable that the bottom of the river would not retain the peculiar form intended to be given to it; and that should this be the case, the concrete banks round the piers must in no long time be broken up, and the piers be weakened, first, by the increase of their unsupported height, and, secondly, by the diminution of the depth and solidity of the material through which the piles of which they mainly consist are driven.

Looking to the changes which have taken place in the bed of the Thames, and the disturbance of it especially at the site in question, in the various attempts to keep up the old bridge, they do not consider that any plan which does not comprise solid stone piers and abutments, carried down deep in the London clay, can be regarded as possessing a "permanent character." Further, that it specially demands the aid of cofferdams, and that the saving of the cost of a temporary bridge is not a sufficient compensation for the trouble, risk, and extra cost of constructing the bridge in two sections, as now proposed. At any rate they say, and justly, that if the present design be carried out, the foundations, masonry, and iron superstructure of the two sections, except the plates which carry the roadway, should be built entirely independent of each other, so as to reduce the consequences of unequal settlements in them, to the least possible evil.*

It will be seen that this is a very serious affair. Mr. Page should have the fullest opportunity afforded him for explanation and demonstration.

* A view of the proposed bridge and details will be found in vol. xiv., pp. 409.

THE ARCHITECTURAL MUSEUM.

THE annual *conversazione* in connection with this institution, took place on Wednesday evening, at the Museum, in Canon-row, Westminster. The Right Hon. Earl de Grey presided, and there was a very large attendance of visitors.

The chairman, in opening the proceedings, congratulated the meeting on the large assemblage he saw before him, which, he said, was a proof that the institution was increasing in interest, and therefore he hoped increasing in utility. Although it was started under less favourable auspices than many other institutions, it had been steadily progressing. He would not attempt to give any account of what the institution had already done, but would at once call upon the Treasurer to read a statement of the proceedings of the past year.

Mr. Scott (treasurer) read the report, from which we take the following:—

"Our great and primary purpose, and that which embraces all the others, is to promote the advancement of all the branches of decorative art which are connected with, and subsidiary to architecture. It would be worse than idle to attempt any concealment or extenuation of the fact that these arts had generally sunk, in this country, to a *very low ebb*. The inveterate love of cheapness had either banished decorative art altogether from our buildings, or placed it in the hands of a humble class of artizans, whose limited education and means rendered it impossible for them duly to study the arts they were called to practise, and even *their* works being considered too costly, they were rarely used fresh from their hands, but were mechanically repeated by casting or by machinery, till what merits they possessed became nauseating by continual repetition. Painting and sculpture, in their higher branches, had long been severed from their sister art, and the humbler branches, which yet deign to unite themselves with architecture, are of necessity left in the hands of workmen who from time to time emerge through their own talent and exertion from the ranks of the mechanical artizans, and these had no opportunity of visiting and studying works of former periods, nor of perfecting themselves in their respective arts. It was to aid this humble but meritorious class of artists that this museum was founded; and its purposes are to bring together within their reach specimens of the arts of various periods and styles, as carefully selected as our opportunities will permit; and further, to do all in our power, by courses of lectures and other means, to aid and encourage them in the study of what we place before them.

Let it not, however, be imagined that by bringing before them specimens of the arts of former periods, we wish to make these the models on which their own works should be founded. It is absolutely necessary to advancement that the artist should have a reasonable degree of knowledge of the attainments hitherto reached. Without this he has no foundation to go upon; he is ignorant of the levels already attained, and from which his own progress should commence; but once knowing what has been reached, and having made sure his own footing on that level, his motto must ever be 'Excelsior;' and to aid him in building upon the foundation laid by the works of former ages, we are constantly urging, in every possible way, that his own works should not be mere dead imitations of those of the past, but that he should only use them to aid and guide him in obtaining ever fresh supplies of taste and beauty from the fountain-head—the works of nature herself—that museum of art which belongs alike to all ages of the world, and to every family of man."

The progress of the society was referred to, the various donors named, and special reference of course made to the present of 50*l.* from Prince Albert, and to the fact that H.R.H had consented to become the patron of the Institution. The report concluded with an urgent appeal to the public for support.

The report having been adopted,—

The Rev. Dr. Wordsworth moved that a vote of thanks be given to the contributors of specimens to the museum, and in doing so dwelt at some length on the proper use to be made of those contributions which had been so liberally bestowed upon them: a great deal would depend upon the view taken by those for whose benefit these contributions had been made. But there must be something besides specimens,—there must be the infusion of a master-mind into them; if they were to be of any use, they must have cast around them something of the dignity of the profession of an architect. When they looked around them in that building, they were, so to speak, surrounded by dry bones, into which it was necessary to infuse a spirit, and make them live, as it were, before them. Casts and moulds would be of little use, unless they were presided over by a genius to regulate their application; for it was a source of great indignation to the true lover of the profession to see the gross misapplications of some of the finest specimens of his art. They sometimes saw casts from the most beautiful portions of sacred edifices abroad, applied to the most secular purposes at home. There was great reason to be alarmed at the prospect of the arts in this country now before us; and unless we cleared up our own views in regard to the application of the specimens such as he saw around him, much

mischief, instead of advantage, would be derived from their misappropriation. He could not too strongly condemn the want of sense and propriety exhibited at the present day in all branches of architecture; and considered, that in order to profit by the institution in which they were assembled, it was necessary to have genius presiding over the whole of it, in default of which, their collection of casts and specimens would be worse than useless. In returning thanks to those who had contributed these specimens, he would express a hope that those upon whom they had been bestowed would prove worthy of them.

Mr. Sydney Smirke seconded the motion, and expressed a hope that the contributors to that institution would not consider the reception they were enabled to give to the contributors as any measure of the gratitude felt; and he looked forward to the time when they would be able to leave the place in which they were assembled for one more fitted for the purpose for which the Institution was founded.

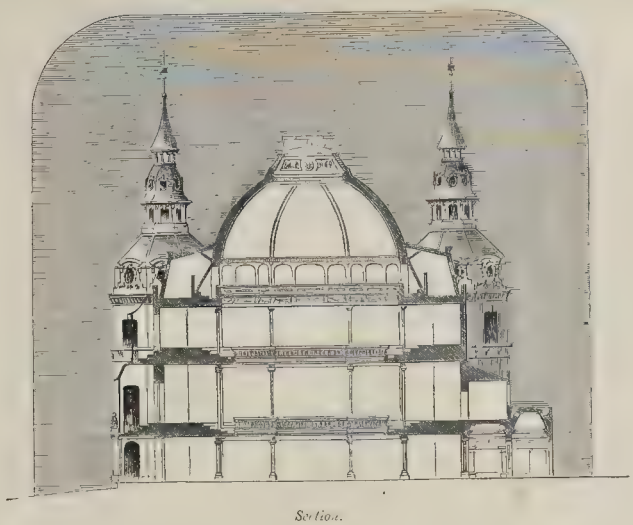
The motion was carried unanimously.

The Chairman said, that having thanked those at a distance from them, for the assistance they had given to the institution, it was their duty to come a little nearer home, and return thanks to those individuals in connection with the Institution without whom they would not have been able to go on at all. They had been kind enough to give their time and their energies to the undertaking, and were entitled to the most cordial thanks of all who took an interest in its success.

Mr. Cole then moved that the warmest thanks of the meeting be given to Mr. Scott, the treasurer, and to the other officers of the museum for their valuable services during the past year. He proceeded to draw a contrast between the new Houses of Parliament and the houses near the Abbey, in that locality, with the extremely humble building in which the architects of Great Britain, who produced that architecture, had thought fit to commence an Architectural Museum. For his own part, he rather approved the contrast; but still he could sympathise with Mr. Smirke in looking forward to the time when they should be in a more commodious and appropriate building. The officers of the institution had been most untiring in their exertion for its welfare and success during the past year; and, as had been pointed out in the report which had been read to them, their exertions had not been without much fruit. Mr. Scott had succeeded in procuring the assistance of Government in their undertaking; and although he (Mr. Cole) was rather averse to accepting such assistance in institutions of that nature as a principle, he considered that we are all so intent upon our own business, and so little disposed to undertake that which is not remunerative, that for some years to come the Government of this country must pay something out of the public purse towards promoting the interests of science and art. He wished it were otherwise; but it was a fact, that the largest amount of support given to the institution came from the public purse, through the hands of the Government, and it would depend very much upon the pressure from without whether that amount of assistance were increased or not. He was disposed to hope that the utility of that institution would become more widely recognized throughout the whole country, and that every art-workman would contribute his one shilling or his five shillings per annum to the support of an institution which has for its object the spreading a knowledge of that art by which he gains his daily bread; and that the very humble institution which they saw within those walls would expand into an institution which would be a credit to Europe. At the present moment he was not aware that there existed in any country of Europe an institution exactly analogous to that. It only required an extension of the spirit which had called together the collection which he saw around him for that institution to attain to the happiest results. They might hope that the foundation was laid of a great institution which would be of the utmost importance in aiding the progress of architecture, and inspiring its professors with a strong sense of that propriety which a previous speaker had alluded to as being wanting at the present day. But in order to get an institution which should stand at the head of all others of a similar nature in Europe, he did not think they should rely so much upon Government as upon the exertions of those who were more directly interested in the profession of architecture themselves. He had much pleasure in testifying to the most valuable services the officers of the institution had rendered, and he was sure the meeting would unite with him in returning them sincere thanks.

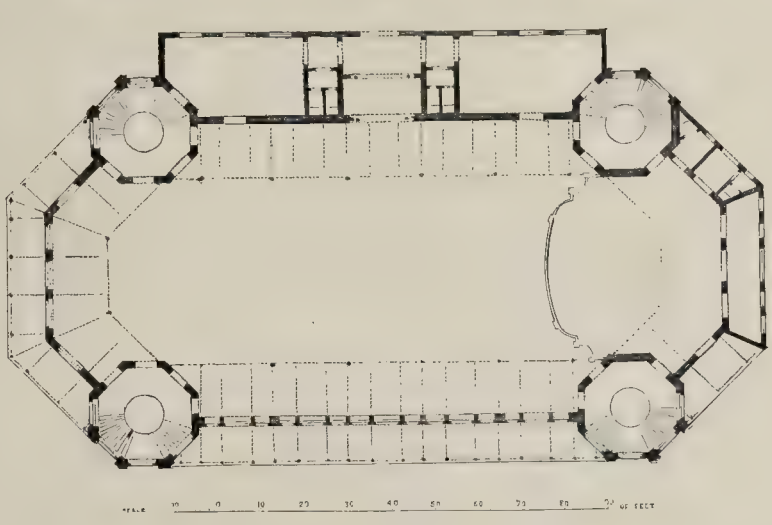
The Rev. Mr. Boutell seconded the motion. Having had an opportunity during the past year of becoming acquainted with the practical working of the institution, he could bear strong testimony to the claim of its officers to their warmest gratitude. The collections around him were by no means complete in themselves, but their real value very mainly depended upon the guiding spirit which presided over the institution itself; and he was quite sure he should have the acquiescence of the meeting when he said, that they had in their presiding spirit exactly what was required to infuse a life into the dry casts themselves. The art of architecture was safe under their direction. He had the greatest hope of the future success of the Museum, under the safe keeping to which it was entrusted. They desired to assemble their collection in that spot, in the first instance, in order that it might expand, and call for a more commodious receptacle; and that by showing what had been done in times past in that great art, and how these different results had been obtained, they might awaken a kindred spirit in our own time.

The resolution was carried unanimously.



Mr. Scott, in returning thanks on behalf of himself and his collegues said, in reference to the assistance received from Government, he would indulge in the hope that the Department of Science and Art, under the Board of Trade, would, from the experience they had of those connected with the Museum, believe that they were most anxious to do all they could in return for that assistance, and he believed that practical value had already been given for such assistance.

Mr. Godwin rose to propose a resolution, which he was sure they would receive with acclamation, "that the thanks of the meeting be given to Lord de Grey, for his conduct in the chair." He had had the privilege for a number of years of experiencing the advantages of Lord de Grey's assistance at the Institute of Architects, of which, as they knew, he was president, and where he had always been ready for a long period of time, to aid any views which might seem promising for the advantage of their art, or even of the members. He (Mr. Godwin), could recognize in the manner in which his lordship had already taken up the Architectural Museum, an intention of pursuing precisely the same course there with precisely the same advantageous results to those connected with it. He did not know that he ought to detain them at that advanced period of the evening, as there were very many things to be seen, but still he would take the liberty of adverting, in two or three brief sentences, to some points that had occurred to him during the business of the evening. He thought it must be apparent to every architect that the advantages of the Museum were beginning to be felt out-of-doors. He had himself, on one or two occasions suggested to workmen in the country who were about to commence operations of importance the advantage of visiting that Museum; and on two special occasions—one in which a man had travelled 100 miles, and the other in which 140 miles had been travelled—he had seen the effect which a visit there for two or three days had had upon the workman. Every one could do something to assist the Museum—the churchwardens, the incumbent of every church in the country, could send something which would be of value; every architect in his own practice, if he would but bear them in mind, would be able to extend the usefulness of that Museum. Such extension could not possibly result from the exertions of a small number. They wanted a widely varied collection of casts. He was disposed to think we must look to eclecticism for progress in their art, recombining existing materials. The necessity for spreading abroad a knowledge of art was obvious. What a falling off was there in the arts of decoration in this our nineteenth century! Wonderful as it is in the way of electric telegraphs and steam-engines, still in point of decoration, no one could look at the works of past centuries without feeling that we had, in an extraordinary degree, deteriorated. Without enumerating other instances, let them glance even at the tombstones of our day, which, generally speaking, are of the plainest possible description, being quite devoid of anything in the shape of decoration—and form a striking contrast, not merely to the wonderful works of the mediæval artists, but to those even of the last century. The same remark applied to ironwork, as might be seen in a walk through the old parts of London. It was equally important to lead the public to appreciate as it was to induce the workman to strive after something better in art; because, as the patron so is the artist. If the public looked for beauty of form and harmony of colour, artists to produce these would not be wanting, and those who did produce them would be well remunerated by the public. Some allusion had been made to Government. He was not quite certain that our own Government always did exactly what was right in those things; in fact, he thought they often did what was very wrong. Mention had been made recently in Parliament of the manner in which English sculptors had been treated; the expression with regard to that had been so universal, that it needed no comments. There was not room for sculpture in our ordinary houses, and it needed State aid. To say that English artists were not capable of successful competition was absurd, remembering, as they did, what members of their own body had done at Hamburg and at Lille, against all Europe. Look at, if he might touch so delicate a subject, the structures now being erected at Brompton, to contain the Vernon Gallery and the Marlborough House collections. Those wretched, boiler-like erections that are now being put up there, he considered a reproach to our time, a great error on the part of the commission, and one which they ought to take immediate steps to rectify. However, he found he had wandered somewhat from the purpose for which he had risen, which was to move a vote of thanks to their noble chairman, which he was sure would meet with a hearty response.



Mr. Parker, of Oxford, seconded the resolution. They all knew the valuable services their chairman had rendered to the cause of architecture, and it was unnecessary for him to refer to them. He supposed he had been called upon to second the motion as the representative of the Oxford Architectural Association, which institution, he believed, was the first to contemplate a collection such as they saw around them, and was being productive of very good results.

The Chairman said it was perfectly true that he had been attached to the science of architecture for some years. He professed no science; he did not understand anything about it in a deep scientific point of view. He had the eye of a scene-painter, he believed; he knew what pleased him, and in that respect he had an architectural turn, and an architectural taste. Some years ago he was requested to take a part in the Institute of Architects, which had given him a certain degree of celebrity which he did not think he deserved. Believing that in such cases the mixture of different classes of society was of service, he accepted the office, and he had endeavoured to the best of his ability to discharge the duties of that office, and had done all he could to be of service to the noble art of architecture and its professors. The Architectural Museum was founded on the same principle as the institution to which he had just adverted; but there was this difference, that the humblest follower of the art might participate in the advantages offered by the Museum. They had heard from high authority that it was an institution peculiar to this country. There was not in France (although there might be many good institutions there) an institution to which the lowest workman—a man literally in his apprenticeship—might come for a mere trifle and be able to see collected together all the best specimens of every style of architecture in which it is possible for him to be employed. He

CONCERT HALL, SURREY GARDENS.—MR. HORACE JONES, ARCHITECT.

Section.

Plan.

(the chairman) recollected urging on one occasion, that those who were interested in the institution should not confine their specimens too much to one class. The Mediæval style was then coming into vogue in the country, and a larger collection of casts in that style had been made perhaps than in any other by private individuals. At that time he stated that an institution of that nature ought to be general. He believed that suggestion had been acted upon. It was perfectly true that the largest number of the specimens around them referred to the Mediæval period, but they were not exclusive. They were now confined for want of space; they had hardly the means of showing what they could do. They were, however, stimulating fresh individuals to come forward to assist them, and he hoped the time would come when they would stand in a more advantageous position. He strongly recommended that no effort should be spared to insure a continuance of the support received from the hands of Government; and concluded by thanking the friends of the institution for their past support, and calling upon them to increase rather than diminish that support, for the future. For himself, he could only say, that nothing on his part should be wanting in promoting the welfare of that excellent institution.

THE MUSIC-HALL AT THE SURREY GARDENS.

THE Surrey Gardens Concert Hall, which was opened with the first of a series of musical performances on Tuesday last, is a building of unusual dimensions and considerable constructional merit. As shown by the plan and section, it consists of one great hall, with three tiers of galleries, and the orchestra at one end, covered by an arched ceiling, with four stair cases octagonal on the plan, and the requisite refreshment and retiring rooms. At one side of the building, access is gained from two of the internal galleries, by numerous window openings, to external covered galleries looking towards the lake. The ends of the plan, it will be seen, are semi-octagonal; and the projections of the main front, the towers with the somewhat Eastern appearance of their terminations, and the high roof curved in section externally as internally, and surmounted by a continuous lantern with louvre boarding and iron railing at the top, combine to produce a certain effect. The materials are grey stock bricks, and red brick for the towers and window openings, Portland cement for mouldings and ornaments, and cut slates and zinc for the roof coverings, the latter material being also used for the dressings to the lucarne openings

of the towers, and the dormer windows of the curbed roof. The prominence of the roof, together with its main form, realize somewhat the expression of the feature in Palladio's Basilica at Vicenza. The material, zinc, laid with rolls, contributes its own peculiar character to the design; and where used turned up into ornamental work, suggests the possibility of an extensive application of this material for decorative enrichments. Zinc, of course, has, comparatively speaking, but moderate durability; but it is extensively used by the French, with whom it would seem to be not only better laid, but as material, to have much greater power of resistance to atmospheric changes. The question is certainly well worth special investigation; for, though galvanized iron has been used over large areas of roofing, as in the Houses of Parliament, the great difficulty which there is in preserving the edges from rust is a matter of serious consideration. The use of lead for the several roofs and flashings to the buildings now under notice, would, it is thought, have increased the cost about 1,000*l*.—At night time when the interior is lighted up, the effect from the exterior is one which is novel in London.

When there is some difficulty in describing a building through terms belonging to recognised styles, the chances are that the very difficulty arises from that which is part of the merit. Again, it is possible to use a bad style, as the leading one, and yet to gain effect in masses, and in general design. Some credit of that kind is due in the present case. The architect's favourite style seems to be the degenerate Italian, with a large infusion of French taste. Natural ornament is freely introduced. Piers at the base of each tower at the angles, however, support small groups of figures and ornament of very indifferent character. Some difficulty with the design of the towers is also obvious in certain window openings, where the stairs come in the way. But, full consideration of details by an architect himself, is impossible under the present system of executing works. The architect is not placed in a fair position; and happy may he feel, if, as in the present case, he can gain a measure of success in the decorative effect, and can escape a fatal omission or error as to his structure.

The general plan here, indeed—though not involving many requirements—must be considered as well chosen for effect, and as conducing to the structural sufficiency of the building. The only exception calling for serious regret, is that of the narrowness of the treads of the stairs next the hand-rail. Some alteration will, we fear, be required to prevent all likelihood of accidents. On the other hand, the provision of a large amount of staircase accommodation calls for especial praise. The staircases are each 21 feet in the clear, and the stairs are 6 feet wide, with a 9-feet well-hole. The landings are partly supported by tiers of iron columns,—precautions which, in long lengths of landing, are too often omitted.

The main entrance to the body of the hall is in the centre, where the principal refreshment-rooms are placed,—forming a projection from one side of the building of one story in height, the cornice of which will have placed along it a line of gas jets, and being surmounted by flower-vases. The dimensions of the hall itself are in the clear 153 feet 6 inches by 68 feet 6 inches, and the external dimensions, galleries and refreshment-rooms included, are 173 feet 6 inches by 99 feet. The external galleries along the side are in width, the lower one 8 feet 6 inches, and the upper one 5 feet 9 inches. The internal galleries of the hall are in width 16 feet 6 inches, except in the case of the upper gallery, which does not project in front of the general line of columns. The height of the hall is 77 feet in the centre, to the underside of the glass of the lights, and 70 feet deducting the lantern.

The iron columns to the upper tiers are hollow, and are reeded, and with a spiral band; and have enriched capitals, over which a shell is fixed on the front of the girder. The columns of the ground story, from the difficulty in getting other castings executed, are of the cross form of section, and are finished in cement. The capitals here are connected with the girder by a group of trusses. The curved fronts of the galleries are in ironwork, cast in patterns exhibiting musical instruments and other devices.

The divisions of the galleries and roof are into five bays. The roof-framing is composed of main and intermediate ribs, which spring from the floor level of the top gallery, and are cut to the curve, the main ribs being 13 inches by 6 inches, in four thicknesses of 1½ inch stuff, breaking joint and bolted together, and with a rib of wrought iron rivetted, in the centre—an addition which is perhaps not necessary. The upper ends of these ribs are notched or tenoned to a strong sill, at the base of the external lantern, and which sill running all round it, forms part of a system of framing after the manner of a queen-post truss. This system of roof is a modification of the well known arrangement revived at the Exhibition building in Hyde-park, the Great Northern Railway station, and other important works, and has been employed by the architect of the Surrey Music-hall in many instances, and successfully. It will be seen that particular care would be required as to the sufficiency of the sill or continuous member at the heads of the ribs, and to the manner of notching or tenoning to it; and which care in the present case has doubtless been taken. There is, however, a further important distinction between this roof and such as have the ribs built to compass the whole span. In the Hyde-park building the arched ribs were thought not to exercise thrust; and abutment, if provided, was, we believe, regarded only somewhat as a measure of precaution. In the other case, however, there being no tie, abutment is obviously the sole dependance for the safety of the structure. This the architect here has provided by bracing from the towers—that is by a system of framing, within the thickness of the gallery floor, and which may be compared to a trussed partition laid flat. In some degree, the contrivance resembles one used in iron, at the Crystal Palace at Sydenham. Further, the framing at the opposite sides is connected at the ends; and the whole principle and arrangement might seem free from objection. The district surveyor, however, thought that tie-rods were still necessary, and these now detract much from the effect of the interior. The main and intermediate ribs are covered with rafters laid purlinwise,—every fifth or sixth rafter being a deep one running through the whole thickness, and to these last the ceiling rafters cut to the curve are fixed. The purlin rafters are of course boarded for the zinc. The ceiling is relieved only by mouldings on the main ribs, and along the centre; but the apsidal form of the ends gives it a good effect. The central portion, from end to end, it will be understood, is flat,—here there are three deep octagonal apertures, panelled with perforated zinc, and glazed at the top. The lighting by night is by a line of gas jets round the main cornice, and by chandeliers under the galleries. The chandeliers, brought in a hurry from the glass warehouse, should be exchanged for something from the architect's own design. *Art* in such things will tell more than committees are aware of. A more serious deformity in the interior is supplied by two hideous boxes thrust into the lower gallery next the orchestra; and which we venture to assert the architect has had nothing at all to do with. Architects, however, should more frequently protest against things seriously detrimental to their work; and so, most unfairly injurious to their reputation.

We should state that the orchestra, as arranged for the opening, to accommodate 1,000 performers, has what we may call an upper story. The front of this is hung by iron rods from a strong truss above. Adjacent to the orchestra are refreshment and retiring rooms for the performers. Over all, is a great sounding-board,—the cornice decoration, which is of festoons and trusses, ranging across it. The orchestra generally is too plain in effect; but for decoration in colour in any part of the building there has been no time. Decorative painting should go ultimately further than the gilding of a few enrichments. Considering that four months have sufficed for what has been done, the architect, Mr. Horace Jones, deserves some praise. The work is creditable to Messrs. Scott and Cornwall, the contractors.

Exclusive of the orchestra, the building will accommodate about 10,000 persons; and 12,000 can be accommodated in all parts, and inclusive of the external galleries. The building was contracted for at 17,000*l*.; and 1,200*l*. more may be the cost of certain additions in the way of refreshment-rooms, ordered by the directors.

The gardens have been drained and altered under Mr. Forest's direction: Mr. Danson has painted a view of Constantinople, looking down the Golden Horn, and a representation of mountainous scenery; has contrived some elaborate machinery for allegorical representations; has completed a kiosk, in the gardens in an Eastern style, with some aid from particulars furnished by Mr. l'Anson; also an imitation of stalactite caverns, and a novel system of garden illumination,—the lights being placed along the borders of the grass, in oiled and painted canvass shades. M. Jullien holds the *bâton*, and we can only say that the company appear to well deserve success. How the management may handle their materials, however, has yet to be seen.

LODGING-HOUSES FOR THE INDUSTRIOUS CLASSES.

THESE foundations, having their origination in our time, and now assuming a national importance, have become essential to an improving generation. Based on philanthropic principles, their aim and object ought to be, to furnish dwellings for the labourer and his family, *in quality better than* those hitherto attainable, and *in cost more suitable to his means.*

To strike in at once upon the very best possible mode of arrangement and distribution of structure, or to afford accommodations at the lowest possible rates, could hardly be expected: it requires time, and application, and experience, to consummate these objects; and the wonder is, that so much has been so well done in so short a period.

It is manifest that, in order to be permanent and really utilitarian, all such institutions must be *self-supporting;* and as the abodes of the toiling millions—their hearths and homes whereat the manners and morals of their children are fashioned,—involve all that is valuable to humanity—their comfort, their self-respect, their independence—nay, their immortal interests,—it behoves the citizens of this wonderful metropolis, as well as the Government charged with the country's destinies, to encourage and promote the movement.

Some reference to what has been already done is necessary to determine what remains yet to be done: and if it happen that any fault be found with the realization of good intentions, it is not because there exists the smallest taint of suspicion as to the pure motives of the first benevolent and distinguished founders: no, their object was to do good, and *they* will not object to him who would do better.

The first model lodging-house, founded within seven years, was projected for the residence of *single men;* it stands in George-street, St. Giles's, is a solid building of five stories with *a basement*, having a frontage of 78 feet. There is no *curtilage in the rear*, which is built up solid, without windows, save in the staircase, the construction being (what is called) fireproof: every floor is bisected by the staircase, and forms two great chambers or lofts, plainly plastered, each chamber being about 32 feet by 25 feet, and 9 feet high: these are partitioned off by wainscoting, about 6 feet 6 inches high, into two ranges of chambers or forms, measuring 9 feet 6 inches by 1 feet 6 inches! Each chamber has a 3-foot bed, a chair, and washstand; and a corridor of 7 feet wide divides the two ranges: thus there are fourteen lairs in each of the ten rooms, making sleeping quarters for 140 men.

It rarely happens that there are two beds vacant at a time, and there are generally supernumerary candidates for an empty room. This is the best argument for the great utility of the establishment and for the sufficiency of its provisions, *quoad* bachelors; but the chief points of advantage are to be found in the large kitchen and its ample fire, always in full action for the service of every individual,—the warmth, cleanliness, and ventilation, together with gaslight, and not least in the consolation of a spacious reading-room, not ill provided in periodicals,

which answers as a saloon for the whole community.

By this mode of laying out, each room is open, above the height of 6 feet 6 inches, to the breathing supply of fourteen inmates. If there should be any one unruly, the system of the house corrects it: the minor grievances are compounded for,—2s. 6d. a week, *paid in advance*, being the total charge per head.

A single man, whatever be his earnings, must find great facilities under such a regimen; and seeing the difficulties which beset a workman or mechanic, ay, or a clerk on 70*l.* a year, when he incurs the expenses of matrimony; the support of a wife, with only *one child*; with the incertitudes of employment, and the misfortune of sickness sometimes superadded, we cannot wonder that all these berths are full.

A visit to the single rooms of married labourers, crowded with half clad, ill fed, and, perhaps, worse taught children, must certify to the political economist of London, how unhappy is the case of the father, how wretched that of the mother, who, yielding to the natural, the laudable, the virtuous impulses of our nature, have committed the mortal error (in their sphere) of canonized matrimony.

Accommodate, then, the bachelors: "make it comfortable to" them. From the above remunerating summary it will appear that a return must be obtained for the capital expended.

There are several other establishments since built by the Metropolitan Association for improving the Houses of the Industrious Classes, which company has obtained a royal charter, and has already completed five large concerns,—one at Bermondsey, one in the City, one in St. Giles's, one in New-street, Golden-square, and a very fine building in St. Pancras-road, all for families: of these, the last is decidedly the best as to healthful situation and construction. Standing on high ground in an open thoroughfare, it has a reserve of space (paved), in the rear, for drying linen, &c. and in the front for open air exercise, and the recreation of children. On inspecting the various houses, the difference in the infantine aspect is most remarkable. While at Golden-square (New-street), the poor nurslings have a wan complexion, and more subdued deportment; here they are animated, and although little better in attire, they seem less constrained. The purer air and larger range may have this influence, as upon the wild flowers, when transferred from laughing meadows to the smoked window cill. The little ones of Golden-square do look dislocated; for there there is no reserve of play-ground, except a courtyard, built around to 50 feet in height, like a Parisian hotel. There is an internal quadrangle, receiving sunlight at an angle of 45, and all around narrow lanes, athwart one of which the colossal brewery rises in obnubilated majesty. From the brewery a reek of fermenting vapours perpetually issues, and the stone vaults for 1,000 tuns traverse the basement of the lodging-house throughout: in fact, the inmates complain of the *incense* thus offered, and keep their windows close to exclude it.

Far be it from us to utter one word unjustly to the prejudice of any private interest; still the fact must be admitted that it was precisely here that the cholera raged with such unwonted violence, and the ranges just opposite to the model house were those where the heaviest visitations were felt.

The great barrack (for that is its character) erected here is 126 feet by 90 feet: it has frontages to four streets or lanes, is five stories, or about 60 feet in height, and encloses a paved court-yard, 72 feet by 30 feet. The entrances are all *internal*, which gives a gloomy and prisonlike aspect to the place. The breeze, if any, is denied access, and all aëration is from above. Still it cannot be denied but that these tenements are a vast improvement upon the former habitations of workmen who had been tenants of single rooms. The sets are arranged in suites of two and three rooms, with a scullery and water-closet to each tenement, the sitting-room being about 12 feet square and 8 feet high (8 feet 9 inches in the centre), and the sleeping-rooms about 10 feet by 8 feet 6 inches. The rent of three rooms is weekly, paid in advance, 6s. 4d.; and of two rooms, 5s.

There are in this building wash-houses in the basement, but the ventilation is so imperfect that the poor occupants are constrained to *dry their clothes in their rooms!* This is a hiatus in the precautionary care requisite for such an accumulation of mortality.

The central position of this house, and the paramount necessity which compels the artizan to fix in a location near to his employment, keeps it always full, even at these charges; but every one who will reflect that *twenty-five shillings a week* is about the standard wages of the workman (whatever be his trade), must admit that 6s. 4d. is more than can be spared from the staple support of, say, a wife and two children.

A good tradesman may earn 2*l.* or commonly 35s.; but is he not subject to the vicissitudes of ill-health, as well as change of employment? He must therefore reserve 5s. or 7s. a week for contingencies. This is, we fear, only done in exceptional cases; but set his income down at 30s. and then the rent is more than he can spare. The way, however, in which the excess of rent-charge is met is simply this: the frugal wife furnishes a bed-room—lets it, say at 2s. 6d. a week, and thus becoming landlady, shares her family's sitting-room, and saves thereby 2s. 6d. sitting down at a rent of only 3s. 10d.; but this arrangement brings down the lodger to the position of an occupant of only one room, and that in association with her family and guest.

That the committee of management know this is pretty clear, for a stranger on his *first* inquiry could not find it out unless it were palpable. There is nothing to blame in it, for it is a relief to the party making so great a sacrifice to imperious necessity,—but it proves that the rents are too high, and it also proves the more important fact that the "*Royal Metropolitan Association" does not answer the end for which it was chartered.*

The *Builder* proved, in various articles published long since, that lodgings for workmen ought to be had, and could be provided, for 1s. 6d. per week each room; and that, too, with all the accessories supplied by the company.

It is not the province of the investigator to inquire into the expenses of management of the company, what is the number of *employés*, nor what their salaries; nor what interest they allow for principal moneys laid out; much less, what may be the profits divided amongst subscribers to those admirable institutions: but it is his duty, and his anxious desire, to inform the public that *lodging-houses of a substantial and clean character, embodying all the comforts and improvements* (which he freely admits exist in the model-houses) so requisite for the English workmen and families of our day, *can be provided at the rate of 1s. 6d. per chamber*, and then leave seven per cent. to be distributed to shareholders or capitalists.

In order to fix beyond cavil the fact that such rents are sufficient, it is only requisite to *restate* that eight-roomed houses (the chambers being larger and better finished than those in lodging-houses) are to be had everywhere for 30*l.* a-year, which is 1*l.* 4s. under the charge of 1s. 6d. per room weekly; and these houses, be it understood, have gardens and fore-courts, together with neat fitments and register-stoves, &c. &c.

Pancras-square House, being remote from the business centre, is tenanted for the most part by persons less dependant on labour, and evidently above the class of operatives: some of the suites are handsomely and tastefully furnished: still, as in the others, handicrafts are carried on there also, and numerous families of four or more children, with their parents, are crowded together; in some cases with a lodger inmate also: the superior arrangements, however, of the building, its ventilation, clean staircases, with all the accessories of health therein provided, place it, even under such circumstances, far above the ill-constructed, tottering, and filthy dens of this, or the more central lodging streets of the old regime.

The area occupied is large, and the dimensions of the building are 222 feet frontage to Platt-street, 108 feet to St. Pancras-road, and about the same to Goldington-street, a reserve being paved and walled in at the rear, for a drying-ground. It has five stories, and contains 110 sets of chambers, being divided into eight houses: the rents vary here from 4s. for a long narrow room in the *basement*, to 7s. for the best set, the average price being 6s.; which would realize, provided all were let, an annual rental of 1,716*l.* Notwithstanding the eccentric position, all the chambers are occupied at present, save only fifteen, leaving ninety-five sets paying rent, leaving 1,482*l.* net.

Supposing that the structure, which is fire-proof, had cost 15,000*l.* and that the expenses of management were set down at the liberal allowance of 2½ per cent.; and that, after making allowance for a surplus of fifteen chambers, as unlet and unproductive, then still there would remain *seven and a half per cent.* as interest for the shareholders; no bad return this for money invested on a philanthropic association!

Lastly, for this occasion, comes the lodging-house for families in George-street, Holborn, which is erected much on the plan of the others, being five stories in height, with 174 feet frontage by 72 feet in depth, an internal space being reserved at the back, of 70 feet by 40 feet, which is paved and open above 20 feet: this, also, has a *basement*, opening to a narrow back area, and the rooms therein *are let!* The open-railed galleries, covered at top, which range along every floor, give a lightness and airiness that relieve its otherwise shut-in position. These conduct to the various locanda, as in an Italian Albergo, and divest the place of the barrack character; but the front is too close upon opposing houses, which darken the rooms, especially below; yet this house, from its vicinity to business haunts, is much in request, and *always full*. It contains fifty-six separate suites, and there are at this moment nearly as many *candidates for any vacancy that may occur!* So much as to the necessity for these establishments. Now for the profits.

Suites of apartment, in size and height similar to the Company's other houses, let say at 6s. each set, would produce 873*l.* 12s. per annum. On a calculation, hazarded in parity with the larger house, this establishment ought also to have a dividend, after paying all expenses of management, of 7½ per cent.!

Of the minor domestic advantages enjoyable by the inmates, such as a warm-bath and the use of a washhouse, at a very small charge per hour, little need be said: but the great object of such foundations, is, or ought to be, the providing of homes combined with every possible social advantage, and at the smallest possible cost, consistent with a fair return for interest on capital expended. Is this done? We say no. The struggling artizan, the poor labourer, the porter, and numerous others, subject to casual vacations, *cannot find an asylum there:* in truth, we discover that many persons with incomes fixed, and ranging far above the grades contemplated by the patron and founders of these Institutions, are the actual tenants, and have handsomely furnished domiciles therein.

What is wanted more particularly is that which is found only in the Bachelor's Home, in Endell-street, *a good kitchen*, supplied with a constant fire and hot water: there families and individuals might learn of each other the art of domestic and of *economic cookery;* and by this simple and useful appendage, large fires might be saved in private sitting-rooms, at all times sufficiently crowded, while the amenities of life should be preserved; thus transforming the private kitchen into a parlour, *tolerable in summer* for the family, or even for visitors; if, indeed, we can venture to foreshadow to that extent the ceremonials of conventual life amongst the humble.

One word on the subject of *Wild-court*,—the modernization of that formerly foul nest of lairs which had been cleared out; and the plan whereof was given in the *Builder*.

A commencement certainly was made to remodel these old houses, fourteen in number, occupying the whole range of the court, about 120 feet long: the outside was washed: closets were erected on every floor of each house: the interior also was washed, *painted woodwork and all, in distemper colours;* and they were let, as before, the front rooms at 3s. the back rooms at 2s. or 2s. 6d. weekly. Nothing, or very little, was done to the floors or staircases, which are in a state bad as any hay-loft. The old panelled

wainscoting covers still most of the walls, and affords an effectual shelter for the insect tribes that "multiply exceedingly" therein. The walls of many of the halls, kitchens, and staircases are of rough brick, old, and not plastered! And the basements, although unoccupied, are heaped with rubbish, and unusable! It is true that in the larger front rooms (at 3s.) a sort of bin for a bed is fenced off by a boarded partition 6 feet 6 inches high. This, too, has been washed in distemper colour! Surely, in their present state these houses cannot be considered complete, nor fit for the residence even of the poorest.

QUONDAM.

THE MANCHESTER EXHIBITION BUILDING.

THE five competitors, to each of whom the committee forwarded a cheque for twenty guineas, were—Mr. Owen Jones, London; Mr. H. A. Darbishire, London; Mr. J. E. Watson, Newcastle-upon-Tyne; Messrs. J. Holden and Son, Manchester; and Messrs. Hayley, Son, and Hall, Manchester.

The first named, as our readers know, whose design was in the first instance selected, returned the cheque. The selected design presents a repetition of the three steam-boilers, side by side, with which Brompton is disfigured, with an ornamental brick "front" attached to one end.

Prince Albert, in his letter to Lord Ellesmere, touching the exhibition, says,—"If the collection you propose to form were made to illustrate the history of art, in a chronological and systematic arrangement, it would speak powerfully to the public mind, and enable, in a practical way, the most uneducated eye to gather the lessons which ages of thought and scientific research have attempted to abstract; and would present to the world, for the first time, a gallery such as no other country could produce, but for which, I feel convinced, the materials exist abundantly in private hands amongst us.

As far as painting is concerned, I enclose a catalogue exhibiting all the different schools, with the masters who illustrate them, which able hands have compiled for me, and which was communicated to the National Gallery Committee of 1853, and printed by them with the evidence."

It is a very admirable suggestion, but whether or not it can be efficiently carried out, must, of course, depend on the extent to which owners of choice pictures respond to the invitation of the committee.

CHURCHES STRUCK BY LIGHTNING.

IN your last number you give two cases of considerable damage being done to churches by lightning, but no mention is made of lightning conductors. It would be very satisfactory to ascertain that churches and other buildings so struck have not been protected by conductors; or, if they have had any, the substance and material of the conductor, and where and how applied, would be valuable information. Facts of the kind gathered together, if they establish the advantage of applying conductors to large buildings, would lead to their more general adoption, and impart a confidence in their use, which can only be duly appreciated while the storm is thundering over our heads.

A few weeks ago the chimney of St. Jude's parsonage (Southsea) was struck, some of the slating shivered, and a sulphurous smell left in the house. The chimney was about 100 feet from the spire of the church, which is about 150 feet in height, and has a copper wire rope secured to the iron stem of the vane, passing downwards through one of the tower windows, and thence by a ¾ iron rod to and into the ground. It was thought that the presence of a conductor on a ofty building so near would have protected the parsonage, but it did not.

T. E. O.

GASWORKS AT BUENOS AYRES.

THESE extensive works were brought into operation for the first time on the occasion of the festivals, on the 23rd of May and two following days. On the evenings of these three days the streets were lighted by the gas-lamps intended for ordinary illumination, and the Plaza was brilliantly illuminated by ranges of gaslights, protected from the wind by glass globes, and the numerous arches of the Cabildo, or Casa del Justitia, had handsome chandeliers suspended therein. The contract for the buildings, machinery, mains, and lamps, amounting to nearly 50,000*l.* was entrusted to the firm of Messrs. Edward T. Bellhouse and Co. of Manchester, in June of last year, and is being completed under the personal direction of Mr. Wm. Bragge, engineer to the company. The inauguration of gas on the occasion mentioned was most satisfactory, and will prove an era in the march of civilisation and improvement in the regions of the Rio de la Plata.

NEW CONGREGATIONAL CHURCH AT DORCHESTER.
MESSRS. POULTON AND WOODMAN, ARCHITECTS.

NEW CONGREGATIONAL CHURCH, AT DORCHESTER.

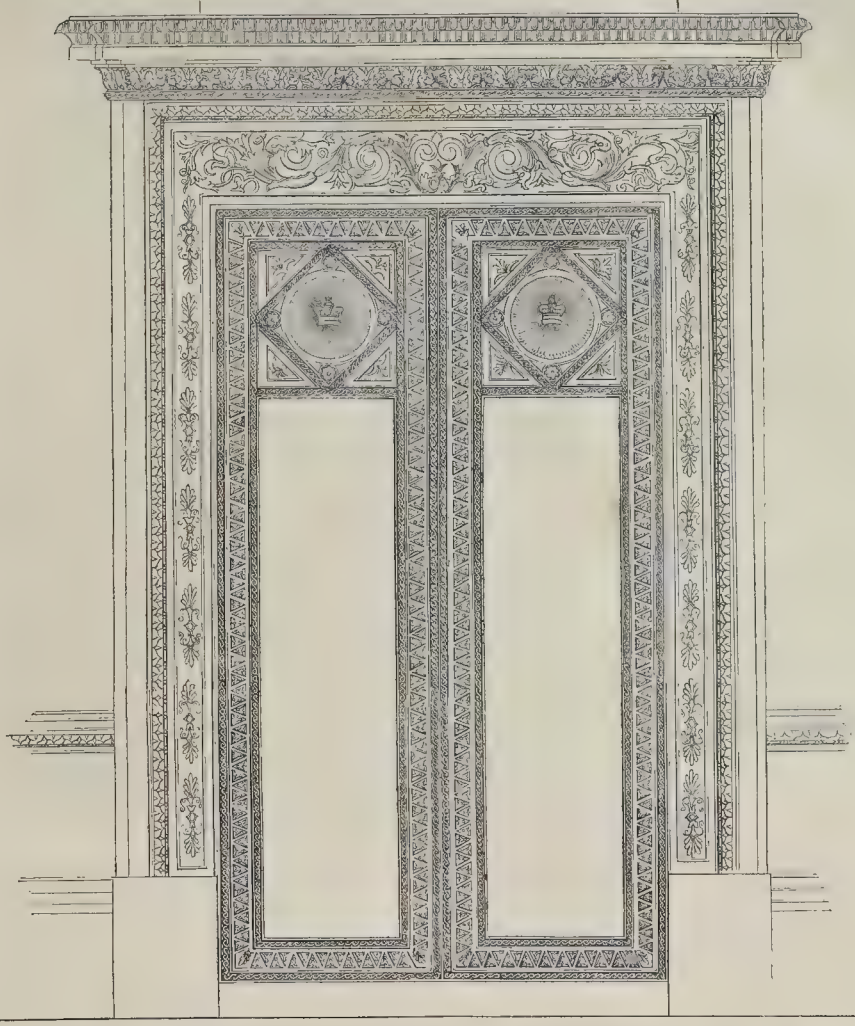
THIS edifice is to be erected in South-street, Dorchester, from the designs of Messrs. Poulton and Woodman, architects. The walls are to be constructed of Ridgeway random walling, with Bath stone dressings. The edifice is 37 feet wide in the clear, and 65 feet from the front wall to the front of the chancel arch, and 76 feet from the front to the back wall of the chancel. The fittings are to be deal, stained. The pulpit is to be a raised rostrum, with iron railing round it. At the front of the church is the west gallery, which will accommodate the children. In the recess behind the pulpit stands the organ. The school-room, 26 feet 6 inches by 39 feet in the clear, is at the extreme end of the site; and the vestries, heating apparatus, and offices lie between the church and the school.

THE RIGHT TO THE NEW-RIVER WATER.

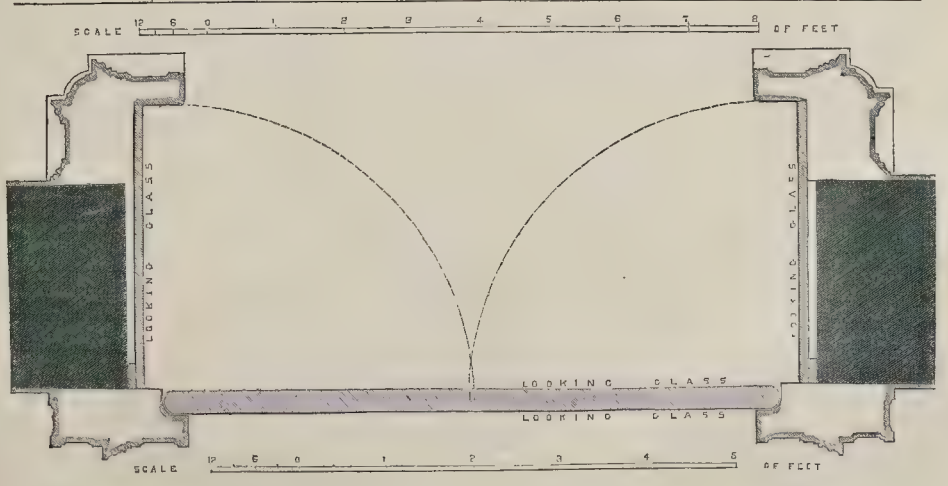
COMPENSATION CASE.

THE New River Company requiring 1a. 2r. 38p. of land forming a portion of an estate at Wood-green, near Hornsey, let on lease to Miss Harris for twenty-one years, for the purpose of constructing a tunnel or new cut from the Southgate-road to Wood-green-common, and the claimant and New-River Company not agreeing, the claimant called a jury before Mr. Under-Sheriff Burchell, in Red Lion-square, on the 9th inst. to assess the damage she would sustain. The amount claimed was 690*l.* being for the lessee's value in the land, for inconvenience of access to the common, and for residential damage by reason of the water being withdrawn from the present channel, and diverted into the proposed new cut. The counsel for the claimant were Serjeant Parry and Mr. Prentice; for the company, Mr. Hawkins. The claimant and other witnesses were called, and Mr. G. Prickett and Mr. J. Barnett, surveyors, supported the claim. The company did not call witnesses. The jury, after a lengthened inquiry, awarded 375*l.* exclusive of the claimant's right to the New-River water being supplied as heretofore enjoyed.

THE NEW APARTMENTS IN BUCKINGHAM PALACE.



DOORWAY.



FOLLOWING up the description of the new state-rooms in Buckingham Palace, erected from the designs of Mr. Pennethorne, and the view of the ball-room, which have already appeared in this journal, we have engraved a view and plan of one of the doorways in the Supper-room. It will be observed, that when open the doors fold back in the reveal. The doors, with the jambs and soffit, are of mahogany: all the enrichments are of metal, gilded; and the upright panels are of looking-glass.

The door dressings are executed in Martin's cement, highly rubbed: the ornaments are of composition. They stand out as white and gold against a marble wall; but some little colour has been introduced.

TITLED LECTURERS.—The Earl of Caithness lectured on the 26th June, in the Free Church at Canisbay, on the steam-engine.

DOORWAY, NEW SUPPER ROOM, BUCKINGHAM PALACE.—Mr. Pennethorne, Architect.

TILE AND PORCELAIN WORKS OF MINTON AND CO.

IN describing an excursion recently made by the Liverpool Architectural Society, the Liverpool *Journal* gives some interesting particulars of Messrs. Minton's works, from which we take the following:—

In 1840, Mr. Prosser, of Birmingham, discovered that if the material of porcelain (a mixture of flint and fine clay), be reduced to a dry powder, and in that state be subjected to strong pressure between steel dies, the powder is compressed into about a fourth of its bulk, and converted into a solid compact substance of extraordinary hardness and density, much less porous and much harder than the common porcelain uncompressed and baked in the furnace. This curious, and, as it has since proved, very important discovery, was first applied to the manufacture of buttons, to supersede those of mother-of-pearl, bone, &c.; and the applicability of the process to the manufacture of tesseræ for pavements soon afterwards occurred to Mr. Blashfield, who made arrangements with Messrs. Minton and Co. for a supply of small cubes, made according to the new process. These he submitted to various trials and experiments; and, having found them in every respect suitable for the purpose, the invention has been since carried out on an extensive scale. Tesseræ of various colours and forms,—red, blue, yellow, white, black, brown,—quadrilateral, triangular, rhomboidal, hexagonal, &c.—have been manufactured on this principle in large numbers. Pavements of considerable extent have already been constructed with them, and they have been found to possess the following advantages:—First, being formed in similar steel dies they are of uniform size and shape, so that they can be fitted together accurately in the laying down of the most complicated designs: secondly, being all composed of the same material, variously coloured, they are of precisely equal hardness, so that pavements made with them are not likely to fall into hollows by use: lastly, owing to the effect of the intense pressure under which they are made, they are quite impervious to moisture, of a flinty texture throughout, and, in a word, to all intents and purposes absolutely imperishable.

The first department into which they were introduced was what is technically termed the "slip-making." Here were several men and boys engaged in grinding the clay which had been dug out of the natural soil in the neighbourhood (in some instances there is a compound of different qualities of such matter obtained from different soils). Mixed with water, and ground so as to become thoroughly incorporated, it is made to the consistency of cream, which, after being strained through sieves of fine silk lawn, in order to separate all gross particles, is allowed to rest until the earthy matter subsides to the bottom of the receptacle: then so much of the water as remains at the top is drawn off, leaving the earthy material in the state of soft mud, from which the redundant moisture is expelled by subsequent evaporation, until only so much of the water is retained as will, after it has been duly kneaded, leave the earthy matter in a plastic state, fit for the operation of being moulded or formed by the hand of the potter into the article intended to be produced in earthenware, porcelain, or encaustic tile.

After having been so formed of plastic clay, the moulded article requires to be effectually dried, in order to dissipate all remaining moisture before it can be submitted to the usual operation of firing; and during such drying the article always contracts in bulk, but with an extent of contraction which is uncertain. This is a difficulty appertaining to the potter's art which is avoided by Mr. Purser's patent of compressing the powdered clay into metal moulds. The machine for this purpose, in great part, is an ordinary screw press, such as is commonly used for cutting and compressing metals.

The manufacture of encaustic tiles is, however, the great attraction of the establishment. The substance of the tesseræ made by Messrs. Minton and Co. by the new process, is very similar to the celebrated Jasper ware invented and introduced many years ago by Mr. Wedgewood, the earthy material being a composition of alumina, silex, and barytes, with some suitable metallic oxide for colouring matter. The tesseræ are coloured throughout their whole substance, and with perfect uniformity of tint of the same colours.

The pattern, after leaving the designer's room, is moulded in plaster of Paris in such a manner as to make the groundwork of the cast a raised surface—the coloured figures, ornamentations, or letterings, as the case may be, remaining hollow. The squares being thus prepared, material of the same component parts reduced to the consistency of cream, and coloured with the requisite metallic oxide, is carefully poured into the interstices: the surface is then planed to remove inequalities, and the pattern appears in the same perfectitude presented from the designer's hands.

The next step in the progress of the work is the "firing." In the composition of the earthy material for forming the tesseræ, and also in the management of the kiln, great care is taken to avoid carrying the vitrification beyond the stage of semi-vitrification, in order that the tesselated pavement composed of such tesseræ may not be slippery to the feet. But, in case of similar tesseræ being made expressly for the purpose of ornamenting walls with tesselated work, the vitrification may be carried further, or they may be glazed, whereby greater brilliancy may be given to the colours than would be consistent with the condition of getting a firm footing on pavement.

In the several departments there are not less than 2,000 persons employed by the firm.

THE CANYNGES SOCIETY, BRISTOL.

THE annual meeting of this society established to aid in the restoration of the Church of St. Mary Redcliff, was held on the 8th inst. on which occasion the experiment was tried of substituting a *soirée* for a public dinner, and proved very successful. In the afternoon, the members of the society went to service in the church, the mayor also attending in state, and an admirable discourse was delivered by the Rev. Dr. O' Brien. The meeting in the evening was held at the Victoria-rooms, and was opened by the performance of a number of glees, in excellent style, by the Orpheus Glee Society.

The president of the society, Mr. J. G. Shaw, then made an interesting address of some length, in the course of which, referring to the want of support by the society, he said,—I cannot believe that we are about to allow the disgrace to attach to our age, which would accrue, if we permitted that noble structure, at once the pride and ornament of Bristol, to crumble into dust. What was Bristol, it was very properly asked by the preacher of to-day, what was Bristol when St. Mary Redcliff church was built by Canynges, as compared with what she is in the year 1856? Look at the extension of her borders in all directions. Remember her population; consider the accumulation of her wealth; reflect upon the advance she has made in the arts and sciences; view the increase of her manufactures, the extension of her commerce, and the addition to her trade; and am I to be told, that with all these superior advantages she is about to allow that great building for want of funds, to be neglected and become a ruin? I will not allow such a stigma to rest upon the citizens of Bristol, even in imagination, for one moment, for it is not the character of our city that she should allow any such reflections to fall upon her. She has earned, and she has richly earned, the appellation of a city of churches and charities. Whatever there be that could be produced for the benefit of the human race, is to be found in her streets, in her alleys, and in her courts. Where will you go and not find some building erected by the munificence of her people, and devoted to the great objects of kindness, benevolence, and charity? Has she not her hospitals for the sick, her infirmary for the maimed, her almshouses for the aged, her educational institutions for the young, and her reformatory schools for the outcast? In whatever direction you survey our city, you will find evidences of the sacrifices, the genius, and the kindness which have been displayed both in former days and by the present generation of our fellow citizens; and it is not to be conceived,—it is not to be expected,—it is not to be suffered,—that the citizens of Bristol should allow the committee of the Canynges Society to dissolve and give up their present proceedings. Great encouragement has been given to the committee, and great satisfaction to myself, by a new effort which has recently sprung up amongst the Commercial Travellers in this part of the country. I have had a great deal of practical knowledge of that class, and I believe the commercial travellers will do you great service in reference to the restoration of this church. They already talk about having a portion of it allotted to them, and I believe it will be found to be no very mean portion of that building which, to their honour, will be restored by the commercial travellers of England. The President, continuing his observations, said, seeing this room so well filled by ladies, I am bold enough to propose,—impudent enough to demand almost,—that they should claim a portion of this building for their own. I am not going to advise what proceedings they should institute, but I am going to request, as president for the year, that they lose no time in forming a ladies' association, and that they may speedily send in a claim, and that the committee may soon hear from them as to the portion of the building they may select for restoration.

Mr. Alderman Proctor then read the report of the committee, showing that the society had contributed since its last meeting 800*l.* to the restoration, but part of this sum was made up from the balance of former years, and the committee felt that unless a liberal response were made to their present appeal, they would be under the painful necessity of resigning their duties.

Mr. Wm. Powell next read a report from the Commercial Travellers' Committee, from which it appeared that "a few friends met on the 22nd February, 1856, and arranged rules for the guidance of this association. At that time they were able to report the amount of cash collected 60*l.* 17*s.* 6*d.* At the first quarterly meeting, on 29th March, 1856, the treasurer reported the cash collected (including the former sum) to be 90*l.* 16*s.* 6*d.* and at the second quarterly meeting, on 28th June last, the total amount to be 158*l.* 11*s.*"

Mr. Powell afterwards said that since the report had been drawn up he had met with another "*Nil Desperandum*," who proposed to put in the window of the Lady Chapel of St. Mary Redcliff, and that it only rested with the chairman and committee of the Canynges Society to take the necessary steps for the work to commence.

Various votes of thanks were moved and seconded by the Mayor, Mr. Alderman Phippen, Mr. R. P. King, Mr. Proctor, and the Rev. Canon Madan.

Mr. W. P. King, in seconding a vote of thanks to Dr. O'Brien, said that Dr. O'Brien, in one of his observations, had stated that he considered the building in a state of something approaching to decay. Now, he felt the truth of that remark, but still he did not consider that it was in such a desperate state of decay as would at first sight appear to a stranger, who was not aware of all they had been doing and of what the church had suffered for some years. They had been going on for years repairing the church, and had, in a great measure, arrested the decay, made good the foundations, and many parts of it, which had served to keep up the structure of the church, had been added, so that now they had no dread of an immediate downfall, as when they first began the work. The restoration had been a bit-by-bit concern, first at one point, and then another, and had not been proceeded with as a whole, which gave it more the appearance of a ruin than it was. He wished he could persuade their architect to join together all that he had been doing for many years. This was to be done by means of colour. On going into the church they saw the effect of their bit-by-bit operations, by finding a part restored adjoining another part covered by dust—a bright window in one place, and a dusty one in another, giving the church the appearance of a ruin. He would, therefore, advise their architect, with the first available funds that should come into his hands, to lay out as much in colour as would show uniformity in the building. He did not mean to advise anything like the meretricious colouring which adorned the Cathedral of Notre Dame, of Paris, but something like that which was adopted in the cathedral in Canterbury,—merely such a colouring as would give quite another idea of the building to strangers than what their eloquent preacher had that day conceived.

After a short pause for conversation and refreshments, the architect of the restoration, read a paper on St. Mary Redcliff Church. He gave a short his-

torical sketch of the building, and having pointed out many of its architectural beauties, referred to the admirable suggestion thrown out by the president, and which he hoped the ladies would act upon. Should they do so, he would recommend their taking that portion of the building which at once addressed itself to them—the Lady Chapel—the position of which was most prominent, and which he was sorry to say, was in a very bad state. In reference to the remark of Mr. King, that colouring should be used to tie together those parts of building that were finished, so as to give a complete aspect to the church, all he could say was, that he should be exceedingly glad to do it, if he only saw the way. They had heard of whitened sepulchres, and he was afraid the attempt to colour those portions of the church which needed restoration would rather retard the efforts of the committee, since the need of restoration would not be so apparent. He was afraid, too, that Mr. King took a somewhat too encouraging view of the condition of the church, which was still, he could assure them, in many parts in a positively dangerous state, and demanded not care when they could give it, but at once. The architect complimented Mr. Rice, the foreman of the works, on the manner in which he carried on the work of restoration. He trusted the committee would be provided with sufficient funds to carry on the restoration with renewed vigour, and that before long with the aid of the Commercial Travellers' Association, and with the Lady Chapel restored to its original beauty by the ladies, there would be no further reproach to the inhabitants of this city, and that they would see that glorious monument of their forefathers in a state fit for being handed down for another lengthened period.

A very satisfactory list of donations was announced, and the Orpheus Glee Club agreeably wound up a very pleasant evening.

PROVINCIAL NEWS.

Horncastle.—The new Corn Exchange here was opened on 3rd inst. The building is erected on the site of the Old Three Maids' Heads Inn, in High-street, where the corn market used to be held. The street front is of dark red brick, with stone dressings, and is formed into three compartments by pilasters on the ground floor, and columns with carved capitals on the upper one, above which runs an enriched cornice and balustrade. On each side of the entrance, which is in the centre of the building, is a broad segmental arched window. Over the doorway in the first floor is a large circular-headed traceried window, and in each side compartment there are two smaller windows. The first-floor of the frontage premises contains two rooms, which have been taken by the committee of the Mechanics' Institution, who propose moving the library, museum, &c. to these more central premises. In the rear is the Exchange-hall, 61 feet long by 33 feet broad, and 35 feet high (to the underside of the lantern). The walls are decorated with arches in low relief, and the roof is of an oblong domical shape, constructed of iron, with wood framing above, to form the covering, and receive the glass lantern, of a size proportionate to the building, and affording facilities for ventilation. The iron girders and other portions of the roof are decorated in diaper pattern, with colour, and relieved in parts with gilding. Across the north end of the room is a gallery several feet in width, which, in front, is ornamented by a bronze railing. The waterpipes for heating the room are placed above the floor, and being painted are rather ornamental than otherwise. The cost of the building will be about 2,000*l.* The works have been executed by Mr. J. Goddard and Mr. W. Hollingworth, jun. of Grimsby. The building was designed by and executed under the superintendence of Messrs. Maughan and Fowler, of Louth, architects.

Chelmsford.—At the last quarter sessions for Essex, the Rev. J. Cox moved a resolution, of which he had given notice at the previous sessions, to the effect, "that the office of county surveyor being virtually vacant, the court do consider the necessity of electing a new one." A letter was handed in from Mr. Hopper, in which he stated that when he became county surveyor, he gave security to the amount of 3,000*l.* and for forty years he had performed the duties zealously and faithfully, the business of the county having in no one instance been neglected: he had now the additional assistance of Mr. Bourne, an eminent architect, and he trusted he might be allowed to continue in the office, as it would be a testimony to his long services. After some discussion as to the state of Mr. Hopper's health, &c. the motion was withdrawn.

Kettering.—The following are the respective estimates tendered on the plan and specification approved of by the trustees for rebuilding the grammar school, master's house, and repairing the school and premises:—Mr. Young, 2,144*l.*; Mr. Wade, 1,898*l.*; Mr. Norman, 1,885*l.*; Mr. Henson, 1,826*l.*; Mr. Clarke, 1,700*l.*; Mr. Boddington, 1,695*l.*; Messrs. Bayes and Fisher, 1,671*l.* The last-named has, it is said, been accepted. The architect's estimated cost was 1,500*l.* and as this sum is not to be exceeded, the work will have to be diminished to meet it.

Henley-on-Thames. — The new schools, connected with the Independent Chapel, Reading-road, are to be erected on a site forming a parallelogram, 106 feet long, and 45 feet wide, at the extreme end of the chapel property, which includes chapel, burial ground, minister's house, and garden, to which will now be added the Sunday and day schools. The school building will contain two class-rooms on the ground-floor, and two over, for youths of both sexes, as a central and prominent feature. The large school-room will be separated from these by a corridor, extending the whole length of the building, containing the staircase, and affording access to all parts of the building under cover. The school-room will be 45 feet long, 25 feet wide in the clear, and 24 feet high to the apex of the roof, which will be open to the ridge. When required, the school-room will be divided by a folding partition, so as to form two school-rooms, for girls and boys, each having its distinct entrance, with yard, and proper offices in the rear. The large room is calculated to seat 250 persons, and will be ventilated on the principle patented by Mr. C. Watson, of Halifax. The buildings are designed in the Gothic style. The cost of the works, including earthwork, boundary walls, stoves, ventilation, &c. but exclusive of fittings, will be about 500*l.* Mr. R. Scott, of Henley, is the builder; and the architects are Messrs. Lander and Bedells, of London.

Ashford. — The new stock market will be opened to the public on the 29th inst. The works are progressing under the direction of Mr. Bulmer, architect. The siding now in the course of erection by the South Eastern Railway Company, will enable stock to be brought to and taken from the market to almost every town in Kent, the siding being in the market.

Cirencester.—The new museum building, recently erected by Lord Bathurst, for the reception of the Roman pavements discovered in 1849, in Dyer-street, will be open to the public during the visit of the British Association to this county next month.

Birkenhead.—The foundation stone of a new post-office was laid in Conway-street, Birkenhead, on Monday in last week, by a son of Mr. J. Craven, the builder and proprietor. The architect is Mr. J. Brattan, and the building will be in the Corinthian style of architecture. The ground floor will be devoted to the purposes of a post-office, and will contain a general office, 28 feet by 38 feet, a messengers' and letter-carriers' room, postmaster's room, and bedrooms. On the first floor there will be accommodation for the Birkenhead Free Public Library and Museum, the large room being intended to be 45 feet long by 32 feet wide, with a room for the librarian behind. The Government have leased the post-office for twenty years, with the option of renewing the lease for fifty years longer.

Stanley, near Liverpool. — The foundation stone of the new schools in connection with the Independents was laid on the 8th inst. The design is Italian. Mr. W. J. Mason is the architect, and Mr. Nicholson, of Stanley, the contractor.

Shields.—The first stone of the new building at the Diocesan Training School was laid last week. These buildings will include a house for the principal, and accommodation for twelve additional pupils. The whole cost will be about 1,500*l.* It is expected that the works will be completed before Christmas.

Elgin.—Our old Trades' Hall, says the *Elgin Courant*, is now among the things that were, and within a day or two the foundation of the North of Scotland Bank buildings will be laid. The directors of the bank have sold a portion of their frontage space to the office-bearers of Trinity Lodge Assembly Rooms, who are to build forward, thus making the Assembly Rooms buildings a complete square, and enlarging the front to the High-street. It was proposed at first to have the front of the new bank 12 feet back from the street; but it has now been resolved to build forward to the street, in a line with the Assembly Rooms, thus forming, as it were, a continuation of the same building, and the whole is to be in one style of architecture. On the other side of North-street the foundation of the Royal Bank of Scotland buildings has been laid, but little progress has yet been made, owing to the scarcity of masons, who appear to have taken advantage of this small stir at Elgin to strike work for an advance of wages, but have resumed work on terms offered, though some had left for Keith and other places.

CHURCH-BUILDING NEWS.

Merton.—Alterations and additions are to be made at Merton Church; Mr. F. Digweed, architect. Tenders have been sent in ranging from Elliott, 899*l.* to S. S. Wilson (accepted), 624*l.*

Croydon.—The consecration of the Church of St. John the Evangelist, Croydon, took place on Thursday in last week. The building is in the Gothic style. It has been erected by voluntary contributions. The entire cost will be somewhere about 5,300*l.* including tower and steeple now erected. The tower forms part of the church, its window facing that of the communion-table. Over the latter is a stained glass window, to the memory of John, Earl of Eldon, who died in 1854, and Louisa his Countess, who died in 1852. The roof of the church is an open one, formed of oak. The whole of the interior walls are formed of Ashlen or Godstone stone: there is no plaster. The building is calculated to accommodate 350 persons.

Braintree.—A tender for the proposed church restoration works from Mr. Parmenter, of Booking, builder (the only one sent in), was laid before the committee at a recent meeting, and, after a long discussion, some reduction having been assented to, was accepted, with an understanding that a portion of the works would be contracted for, and commenced as soon as the sum collected was deemed sufficient to warrant the committee in so doing.

Bury.—A painted window has recently been inserted at the east end of the south aisle of St. Mary's Church, to the memory of the late Mr. James Oakes. The window is of three lights, each light containing two subjects in panels. They are as follows:—The Entombment, the Resurrection, the Appearance to Mary (*Noli me tangere*), the Incredulity of St. Thomas, the Ascension, the Saviour in Glory. The ground of the window is ruby, with vine foliage in various shades of green and white. The ground of the subjects within the panels is deep blue, the border chiefly green and blue: the folintions of the upper part of the window are filled with angels playing on various musical instruments. The inscription runs at the base of the three lights. The subjects are drawn in accordance with the general style of the window, in imitation of the glass of the Decorated period. The artist is M. Gerente, of Paris, to whom the restoration of the painted glass of St. Denis has been entrusted. Some of his painted glass may also be seen in Ely Cathedral. Another compartment of the west window is about to be filled with stained glass.

Shirley.—The new church of St. John the Evangelist, Shirley, was consecrated by the Archbishop of Canterbury on Thursday in week before last. The new church was erected by Mr. Harris, of Croydon, from the designs of Mr. Scott. It is in the Early Gothic style, and is situated immediately to the east of the old building. The new edifice consists of a centre and two side aisles, a nave, and a chancel. Close to the entrance is the font. It is composed of red and grey Cornish marble, from the Lizard Serpentine Company, and is about 3½ feet in height. The

seats are of oak, and are covered with uniform carpeting (specially made by Lapworth). The interior walls are of ashlar work, and the arches of stone of alternate colour. The chancel is large and lofty, and from either side project the pulpit and the reading-desk. The east window, by Mr. Oliphant, was erected in memory of the late Lord and Lady Eldon. The window is of considerable height and width, and is composed of five large panes of glass, the centre one of which represents the Ascension, the two left the Crucifixion and the Agony in the Garden, and the two right, the Resurrection and the Entombment. The pulpit is of carved work. The seats (for 350 persons) are open, and uniform throughout, and all face the east. The flooring is of tesselated pavement.

Tiverton.—St. Peter's Church, Tiverton, was reopened on Thursday in week before last, after the completion of restoration works which have occupied nearly three years. In 1852 a committee was formed for rebuilding a great part of the fabric, and Mr. Ashworth, of Exeter, architect, was called upon to survey and report on the condition of the church, and shortly afterwards to prepare plans for reconstructing with enlargement the greater part of the edifice, the cost to be wholly defrayed by subscriptions. Contracts were entered into early in 1853 with Messrs. Gath and Williams, builders, and Mr. Parish, statuary, of Tiverton, for carrying out the plans, consisting of a new north aisle, 121 feet by 23 feet, from which opens a new organ-chamber, 15 feet by 31 feet, and corresponding with Greenway's chapel on the south side: adjoining the organ-chamber is a vestry. Whilst these works were being executed the construction of the nave and clerestory on new piers and arches of Farley Down stone, amounting to a literal restoration of the old, proceeded. In 1855 a great part of the south aisle walls were rebuilt, and an oak roof, copied from the artistic but decayed remains of the original construction, was completed. The tower underwent an extensive repair: the ruinous buttresses, strings, sculptured devices, &c. were replaced with new material. The west window has also been filled with painted glass. The rebuilding of the chancel, almost entirely, was not commenced till the present year. The original design has been improved upon by the introduction of a flooring to the sacrarium and a reredos of Minton's tiles under the east window, which is shortly to be fitted with painted glass, representing the Ascension, by Mr. Wailes. The whole of the church is now roofed with English oak, and the roofs covered with lead on double boarding. The north aisle pews are of new wainscot oak. The nave and south aisle have the former seating cut down and arranged to a suitable height with increased substance. There is a new pulpit in Caen stone. The church as now arranged is calculated to seat 1,060 persons.

Saltney.—In consequence of the rapidly-increasing population of Saltney, an increase in the accommodation for public worship was found to be requisite, and about six months ago the Wesleyan body commenced the erection of a chapel, which was opened on 29th ult. The cost of the building was about 700*l.* giving accommodation to 300 hearers. Mr. Penson was the architect, and Mr. Hitchen the builder.

Chorley.—On the 4th inst. the ceremony of laying the corner-stone of the cemetery chapel belonging to the Roman Catholics took place. Mr. Banks and Mr. Chester, the contractors, Mr. Derham, architect, Mr. Jowett, and other officials, were present.

Ashborne.—Okeover Church is now undergoing a complete restoration, at the sole expense of Mr. H. C. Okeover, from designs by Mr. Scott. The details of the restoration are a high pitched roof, a new porch on the north side, a carved chancel screen, and the whole building to be furnished with open seats in oak. The contractor is Mr. W. Evans, of Ellaston.

Edinburgh.—The town council have resolved to conclude the purchase of a site for the re-erection of the old stones of Trinity College Church, at Calton-hill Stairs, in the parish of South Leith.

Hamilton. — The mausoleum at Hamilton Palace is now approaching completion. The floor of the chapel has been inlaid with marble mosaic. The immense circular glass slab that crowns the dome, broken by a storm in February last, has been replaced. The ground environing the mausoleum has been terraced, levelled, and laid out.

RAILWAY MATTERS.

North Eastern,—Auckland Branch.—For the following details as to some of the principal works on this new branch line, we are indebted to the *Gateshead Observer*:—Starting at Leamside, where the new station will stand between the trunk and the branch, the latter line runs its course for Durham, and reaches the Wear at a distance of about a mile and a quarter, crossing the river at a height of 130 feet, by the Belmont viaduct, 694 feet long, and having nine arches of 60 feet span and 31 feet rise. The "high seam" of coal had been worked, on both sides of the river, by mines of whose operations no records exist. The ancient workings were carefully explored, and built up with brickwork, set in Roman cement. The masonry of the viaduct is of "rock-work." The interior of the arches is of brickwork, the bricks being made on the spot by steam machinery. The structure of the viaduct comprises,—250,000 cubic feet of ashlar, 119,000 cubic feet of rubble, 34,600 cubic feet of brickwork, 97,200 cubic feet of dry-filling over the arches. The Durham viaduct is the second great work on the line, and is of similar material and workmanship to the Belmont, with a Norman corbel table and parapet. It is 832 feet long and nearly 100 feet high, and crosses the new north road and the mill-burn. Its arches, eleven in number, are of the same span and rise as those of the rival viaduct. It was a most difficult task to obtain a sufficient foundation for this structure. Piles of great length were driven through peat-moss, quicksand, &c. by steam-power: the spaces between the piles were filled with concrete; and a framing of timber, laid upon the piles, carries the superstructure. The Durham viaduct, standing upon 21,300 feet of piling, contains 184,500 cubic feet of ashlar, 56,000 cubic feet of brickwork, 140,000 cubic feet of rubble, and 142,000 cubic feet of dry filling.

Bawtry Viaduct, on Great Northern.—The viaduct carrying the Great Northern over the Idle, a short distance beyond the station at Bawtry, is to be taken down and replaced by one of brick piers, supporting iron girders. The present viaduct is entirely of wood, and nearly a quarter of a mile in length. The contract has been given to Messrs. Holme, of Liverpool (who erected the plant works at Doncaster), for upwards of 15,000*l.* The time required to complete it will be thirteen months; beyond which period the Messrs. Holme are liable to a very heavy penalty per day. It is calculated that nearly 100 men will be employed; and 2,000,000 bricks also required to raise the projected piers, of which there will be sixty five. The work is to be commenced forthwith.

Railway through London.—A new prospectus has been issued of the Metropolitan Railway, a project for some time before the public. The line will be 4¼ miles in length, connecting the London stations of the Great Western, North Western, and Great Northern with the General Post-office, and is to be below the level of the existing streets. Of the capital of 1,000,000*l.* the Great Western Company are to take 175,000*l.* and the Great Northern Company 175,000*l.* leaving 650,000*l.* of which 150,000*l.* have been for a considerable period subscribed by the public. The remaining 500,000*l.* was subscribed and paid upon by the promoters; but these are now to be put forth to new applicants, under a guarantee of 6 per cent. from Mr. J. L. Ricardo, on condition of an equal division of all surplus profits. This guarantee will be secured by 100,000*l.* deposited by Mr. Ricardo in the London and Westminster Bank.

Railway Earnings.—The traffic on railways for the past half year exhibits a remarkable increase, and has resulted in an extraordinary rise in the value of this long-depressed property. Thus, the London and North-Western, with 553 miles of railway, has earned 70,000*l.* more than in the corresponding period of last year; Lancashire and Yorkshire, with 253 miles, 61,000*l.*; London and South-Western, with 258 miles, 52,000*l.*; Great Western, with 319 miles, 55,000*l.*; Midland, with 498 miles, 49,000*l.*; Great Northern, with 283 miles, 40,000*l.*; South-Eastern, with 290 miles, 38,000*l.*; North-Eastern, with 682 miles, 34,000*l.*; London and Brighton, with 173 miles, 33,000*l.*

Iron and Gutta Percha Carriages.—Somebody in Albany, says an American paper, is getting up a railroad car out of wrought iron and gutta percha. Such a car, it remarks, can be jammed but not broken: it may smash up, but can make no splinters, nor can it lacerate limbs.

Cast-iron Sleepers.—We are informed, says *Herapath's Journal*, that the report of the engineers on the cast-iron road laid in the years 1850 and 1851 (when iron was at a very low price), to the extent of 200 miles in England and Ireland, on Barlow's patent, are highly favourable. Wherever they were laid with new rails, amounting to ninety miles on the South-Eastern Railway, and above 100 miles on other lines, the experience is said to be satisfactory. In countries like India, where timber is expensive, and liable to rapid destruction, this system, it is expected, will be extensively adopted.

RECENT PATENTS.

THE following are selected from the lists regularly published in the *Mechanics' Magazine*:—

Page, H. C. An improved method of indurating marble and stone, and of permanently fixing colours therein, with variegated pattern, &c. (No. 2478). To indurate light-coloured stone and marble, the patentee proceeds as follows:—With a soft brush or sponge he wets the surface with a solution of two parts of lime and one pearl-ash: he then exposes the stone to a gradual heat until it is dried through, and has become sufficiently hot to melt white bees-wax, which he next passes quickly over the surface. The process for producing a variegated pattern or device in colours on marble and stone is as follows:—The surface should be clean and fine, but not polished, and the colouring matters are applied according to taste, after which the stone is subjected to a sufficient degree of heat to melt wax, and when wax is so applied the colouring matters become perfectly fixed.

Daines, J. B. An improved mode of treating surfaces of stone, plaster, and cement, for the preservation of the same from decay (No. 1765). This invention consists in coating surfaces of stone, plaster, and cement with a solution formed of one part (by weight) of sublimed sulphur and eight of linseed or other oil. The mixture is placed in an earthen vessel, and heated in a sand-bath to from 226 deg. to 278 deg. Fahrenheit, when the sulphur dissolves. The solution is laid on with a brush. *** The filing of this specification was delayed for more than a year in consequence of opposition.

Gilbee, W. A. Improvements in the application of silicate of potash to hardening and preserving stones and calcareous materials (No. 2343). This invention consists—1. In the process of impregnating stone and other calcareous materials with a solution of silicate of potash. 2. In determining the different degrees of strength to be given to the solution of silicate of potash. 3. In the means of drying the stone, either before or after the saturation, to insure a favourable result.

Hill, D. Preparing a material capable of resisting fire, and especially suitable for the interior of puddling and other furnaces (No. 2085). This invention consists in combining and melting limestone with ironstone, or with the cinder from puddling furnaces, or from ball-mill furnaces, and in running the same in moulds or otherwise.

Bessemer, H. Improvements in metal beams, girders, and tension bars, used in the construction of roofs, floors, and other parts of buildings, and in the construction of viaducts, and suspension and other bridges (No. 2323). The patentee puts refined or pig-iron into a puddling furnace, and there works it in the usual way, but leaves off the operation of puddling before the whole of the carbonaceous matters are driven off; or the metal may be puddled until the whole of the carbon is driven off, and the powdery iron resulting be afterwards converted into steel by cementation. Or the iron may be otherwise decarbonized and reduced to steel. In either case the metal is brought to a complete state of fusion in pots like those used in the melting of steel. The metal having been melted, he casts it into beams or girders, which are afterwards annealed; but when beams, girders, or tension bars are required of great length, or are to be very light in proportion to their dimensions, he casts the fluid metal in iron ingot moulds, and afterwards rolls the ingot to the desired thickness.

Taylor, W. An improvement or improvements in the manufacture of iron (No. 2439). This invention consists in treating iron at that stage of its manufacture in which cast iron is converted into wrought iron. The cast iron is introduced into the puddling furnace, and melted and puddled until it acquires a pasty consistence, and then discharged into a vessel of water. The iron is thus cooled in the shape of a spongy mass, the water at the same time preventing its oxidation by the air. The iron after being removed from the water is reduced to a powder, by being passed through rolls or otherwise, and the powder is separated into portions of different degrees of fineness by sifting. The several powders are then washed, and each portion is separately treated in a furnace, in which the iron is balled. The several powders produce iron of different qualities, the finest producing the best.

Swinburne, T. J. Improvements in furnaces or

apparatus used in the manufacture of glass (No. 2429). Claims.—The constructing of furnaces or kilns for annealing glass with flues or tunnels under their floors, and in the side-walls, for the purpose of admitting the passage of air through them, and causing the furnaces or kilns and their contents to be more rapidly and uniformly cooled.

Burridge, G. Improvements in the preparation of glass for ornamental purposes (No. 2481). By his process the patentee proposes to colour the glass on both sides, each side of a different colour, or he employs two sheets of glass of different colours, pressed together or otherwise united.

Tritton, H. An improved safety-apparatus for the protection of persons while painting the exterior of buildings and cleaning windows, which may be used as a balcony for holding flowers (No. 2387). This invention consists of a portable apparatus which may be readily affixed to a window, so constructed as to be perfectly safe for a person to stand upon, and so guarded as to render it impossible for any accident to occur by falling.

Platt, J. and J. Whitehead. Improvements in machinery or apparatus for preparing clay for the manufacture of bricks (No. 2389). Several arrangements for dividing "crude" or untempered clay into small particles, and for separating stones or other hard materials therefrom, are described by the inventors.

ARCHITECTURE AT UNIVERSITY COLLEGE.

THE distribution of prizes at University College, London, for the Session 1855-56, took place on Thursday, the 3rd of July, when Colonel Sykes, chairman of the East-India Company, presided. Professor Donaldson announced the awards as follows:—Fine Art, first year's class,—prize — George Mills, of London; certificates, E. Ransom, of Ipswich; John S. Daintree. Second year's class,—prize—Edward Lawrence; certificates, A. L. Spencer, W. F. Hooper. Construction, first year's class,—prize—Edward Ransom; certificates, James Schofield and George Mills. Second year's class,—prize—Alfred Spencer; certificates, E. Lawrence, W. H. Hooper.

Miscellanea.

GLASS.—Mr. Lavers has just prepared a very large window, in five lights and tracery, for the new church building at Umballah, East Indies. It contains illustrations of the Conversion of St. Paul, St. Paul healing the Cripple at Lystra, St. Paul preaching to the Athenians, the Raising of Eutychus, and the Imprisonment with Luke. These are large cartoons under canopies, with richly coloured general background and tracery. The church is nearly finished, and will be the largest and most handsome, it is said, in India.

THE EDINBURGH SCHOOL OF ART.—The prizes for the competition drawings, paintings, and models of the students attending the School of Design, under the auspices of the Board of Manufactures, were distributed at the National Gallery, in Edinburgh, on Monday in last week. Lord Murray occupied the chair, and the meeting was attended by many of the principal citizens of Edinburgh, from the Lord Justice General downwards. Mr. A. Christie read the report on the department of architecture and ornament, which stated that the number of students who attended the classes in this department during the session was 411, and the number during the previous session 314; showing an increase of 97. Among the students were—painters, 14; sculptors, 3; architects and engineers, 30; draughtsmen, 4; engravers, 6; house-painters, 8; ornamental painters, 1; general engravers, 10; ornamental engravers, 3; wood carvers, 16; glass stainers, 6; brassfounders, 3; joiners and cabinetmakers, 7; marble cutters and stone-carvers, 3; mechanical engineers, 3; pupil teachers, 37; schoolmasters, 3—total attendance on the male classes, 231. In the female classes there were—amateurs, 87; schoolmistresses, 20; and pupil teachers, 73—total female pupils, 180. The class for practical architecture had suffered from the severe illness of Mr. Christie during the winter, and the drawings were therefore few in number; but during the vacation the students in this class had executed a number of drawings, which Mr. Bryce examined. The report adverted to the want of accommodation in the present rooms. A report by Mr. Bryce was appended, in which that gentleman recorded his approbation of the whole of the drawings in the department of practical architecture. Mr. R. S. Lauder read the report of the antique and life departments. During the session, the number of students in these departments had amounted to ninety. In the antique, the progress of many of them had been very gratifying, and in general was very good. Lord Murray distributed the prizes.

BRITISH SCULPTORS AND COMPETITION.—In reply to Lord Panmure, who remarked, as we have already mentioned, that,—"As to public competitions the noble earl (Harrington) must be aware that the sculptors and artists of this country declined to furnish plans to compete for the erection of monuments,"—the veteran sculptor, Mr. E. H. Bailey, says,—"Can Lord Panmure, Lord Harrington, or any other noble lord, say there was want of response by the British artists for the Nelson Testimonial? Or, can it be said that British architects declined to compete for either the erection of the Parliament houses, or, more recently, for their decoration? Did they not cordially reply to the invitation of the City in the cases of the Peel and Wellington competitions? And lastly, did not two British sculptors out of four selected (one being a foreigner and the other Mr. Gibson) submit designs for the Government Wellington Monument, and, although rejected, offer again and again to provide other works? I, for one, never heard of the Scutari monument until I read in the public papers that it was completed, and I may say that, had I been applied to, I should most readily have met the views of the Government, and have been proud to have done so for the honour of England's arms and art."

ENGLISH DRAINING TILES IN FRANCE.—The *Moniteur* states that the Minister of Finances has decided that the machinery for the fabrication of drainage pipes, which hitherto has paid the entrance duty of machinery coming under the common head of steam-machinery, a duty equal to from 20f. to 25f. per kilogramme, shall henceforth be admitted under the head of agricultural machinery (15f. per kilogramme), whatever may be the weight of the machinery in question; but at same time that the machines for breaking the ground or for preparing it to be made into pipes, or any other accessory machines that do not form part of a complete set of machinery for the fabrication of drainage pipes, shall continue to pay the same entrance duty as machines coming under the head of steam machinery.

THE BRIGHTON BRANCH ASSOCIATION FOR IMPROVING DWELLINGS.—The report of the managing committee of this association states that it is most gratifying to them, on this fourth occasion of meeting the shareholders, to be able to confirm the favourable prospects held out in the last report. The net income since 31st March, 1855, to the same date in this year, after deducting rates, taxes, and all other expenses, amounts to 220*l.* 4s. 1d. From this source the committee recommend a dividend (free of income tax) as follows,—20s. per share payable on all shares excepting to shareholders who have only become such after March, 1855, and to these that a dividend be paid of 15s. and 10s. according to the respective quarter in which the 25*l.* per share has been paid. The committee wish to have it in their power, by an influx of new shareholders, to extend the benefits of this benevolent and useful association. At present there are two blocks of dwellings, one for twenty families and one for fifteen families and five single women. The whole has been constantly tenanted since the opening, and the health of the inmates has been excellent. A washhouse, with suitable coppers, &c. is about to be erected (in the yard in Church-street) for the comfort and convenience of the tenants in both the buildings.

ELECTRO-TELEGRAPHIC PROGRESS.—In course of some experiments with a telegraph invented by a Mr. Duncker, two distinct messages are said to have been sent by the same wire, and read off in an incredibly short space of time. Mr. Duncker has successfully tried his invention on a Prussian government line, and on a subterraneous line of 160 miles in England. The invention is said to be applicable to existing arrangements. It is calculated that the adoption of it would enable the telegraph companies to transmit messages at one-fourth of the usual rates, and with more chance of despatch. As remarked by the *Gateshead Observer*, it would be more correct, perhaps, to say, that while the wire transmits one message, the earth transmits the other; but, practically, one wire is made to do the work of two.

MECHANICAL SCIENCE.—A new feature of attraction has lately been added to the machinery department of the Crystal Palace. It consists of a series of lectures by Mr. Partington, illustrative of the labour-saving machinery of Messrs. Muir and Co. of Manchester. A shaping and planing machine was exhibited on Monday last. Rough blocks of iron were submitted to its action, which acquired, at the will of the operator, almost any imaginable form.

TIMBER-BENDING.—Among the new companies which have started into existence under the vivifying rays of the Limited Liability Act, we observe one for introducing to the English public an American patent for bending timber after a fashion, which, by causing the fibres to interlace, increases the strength of the wood, and, by pressing out the sap, seasons it in the course of an hour or so.

THE CENTRIFUGAL THEORY OF THE MOON.—To this theory we again for a moment revert, in order to adduce a new corroboration of its verisimilitude, which has just occurred to us, from astronomical facts or phenomena till now unaccounted for,—as the hovering of stars on the lunar disc while passing behind it had hitherto been. If the moon really have an atmosphere, with vaporous clouds and other aqueous forms, all centrifugalized to its exterior hemisphere under the influence of the revolving or centrifugal force, as it must act on and oblongate a sphere such as it is, always presenting, as it does, one and the same face or hemisphere away from the centre of its revolution,—can it be that the earth is *never* so situated in relation to that hemisphere, that atmosphere, *and these clouds*,—thus for ever, doubtless, placed beyond the *straight line* of our visible presence,—that, at all events, by some reflexion or refraction of light from the latter, as they float in the lunar atmosphere, these lunar clouds may, at least for a moment or so, become distinctly and actually visible to the earth's inhabitants? In such a case as that of a total eclipse of the sun, for example, by the intervention of the moon between it and the earth, ought not some of the lunar clouds to *appear* by refraction, as coloured streaks, *above* and around the black disc of the moon, and amid the ring of solar light thus left? Now, what else can those auroral or flame-hued, roseate, fantastic, and heretofore unaccountable streaks be which, in fact, *do* appear, above and around the black lunar disc, in the midst of the solar total eclipse, and which have hitherto excited so much astonishment and unrewarded curiosity amongst astronomers of all nations? Can these ruddy streaks be anything else than auroral cloud refractions from the lunar atmosphere, seen above and around the horizon of the hither side of the lunar ball, in a way not unlike those false (yet true) appearances, or simulacra, of ships and towns, above the earth's own horizon, by refraction, while yet in reality completely beyond or below that horizon above which they thus appear? And if these strange auroral cloud-spun streaks shall really prove to be the mere refractions of the lunar clouds, as they float in the lunar sun-lit atmosphere for ever beyond the direct line of our terrestrial vision, who shall, in the face of such proof, any longer doubt the existence of vegetable and even of animal and intelligent life on that far-off sunny side, as we may then poetically call it, of the lunar surface? That the *hovering* of stars ere they disappear behind the lunar disc, and the *appearance* of ruddy streaks just where these stars were known to hover, are both of them due to one and the same optical cause, and that cause the refraction of light in a lunar atmosphere behind and beyond its visible disc,—there seems to be very strong reason indeed to believe, apart altogether from the centrifugal theory which we have now broached,—the verisimilitude of which theory, however, both of these facts or phenomena seem clearly to corroborate, while they are themselves, reflexly, illuminated by its explanatory reasoning. It is precisely the chief merit of a new and truthful theory, that it affords satisfactory explanations of known facts or phenomena till then deemed inexplicable, or at least till then unexplained.

POSITION OF THE "COMMANDMENTS" IN CHURCHES.—The suit against the churchwardens of Tewkesbury, charging them with neglect in not putting up the Ten Commandments in the proper place, in conformity with the 82nd Canon, which had been pending since 1854, has been decided by the Judge of the Gloucester Consistory Court, C. J. Mark, esq. Tewkesbury Church, is an ancient abbey church, in which, it appears, service is performed only in the choir, separated at the east end from the outer wall by a stone screen distant from the outer wall about 22 feet: the Ten Commandments are not placed on the screen, but in an elevated position 22 feet beyond it. Formerly there was a second screen, 6 feet to the west of the stone screen, on which the tables of the Decalogue were placed; but in 1848 they were moved to their present position at the suggestion of the vicar. The Judge ruled that, as the Commandments in their present position might be read from different parts of the choir, the churchwardens, having found them in that position, had exercised a sound discretion in not removing them at the mere wish of a parishioner until the next Visitation, when they offered to act as the ecclesiastical authorities might direct; accordingly he dismissed them with their costs.

IRON, HARDWARE, AND METAL TRADES' PENSION SOCIETY.—A deputation, consisting of the Mayor of Sheffield, Messrs. Burton, Richard Stuart, and Joseph Nelstrop, waited upon his Grace the Duke of Norfolk, at the Farm, on Monday last, to present the resolutions of condolence, passed at a general meeting of the society, held at the London Tavern on the 30th ult. His Grace most cheerfully accepted the invitation of the society to succeed his late noble father and become its patron.

LABOUR IN CANADA.—The price of labour in Canada, notwithstanding the marked decline in provisions, remains steady, according to the *Canadian News*, at about the current rates of last year. Good carpenters receive 7s. 6d. to 8s. 9d.; and in some cases as high as 10s. Halifax currency, the 1s. being equivalent to 9½d. sterling; masons and bricklayers, 8s. 9d. to 10s.; common labourers, 5s. to 6s. 3d.; brickmakers, 6s. 3d. to 7s. 6d. per thousand; cabinet-makers about the same as carpenters, mostly by piece-work.

THE IRON TRADE.—It is not denied by the most eager upholder of prices, that they have very generally declined in the face of the quarterly resolve to maintain them at former rates, and these reductions are admitted to have gone even to the length of 20s. and 25s. a ton. The "settlement," too, of the prices, for the quarter, as it is called, is allowed not to have had the effect of bringing so many orders as were expected. The puddlers at the Elsecar Iron Works, unable to suffer the heat, have been shirking their work, and warrants to compel them to roast themselves alive having been issued against some of them, a general strike has been the result, 300 men having left the employment, which is therefore entirely at a stand. More roasting warrants have accordingly been issued, and fifteen of the puddlers are about to be brought to the stake.

MIDDLESEX INDUSTRIAL SCHOOL COMPETITION.—It may be well to mention that the Committee of Visitors selected the designs for the proposed Industrial School by Messrs. Aickin and Capes, Mr. George Henderson, and Mr. W. B. Moffatt, and awarded the premiums accordingly.

GAS.—From the voluminous accounts of the Liverpool Gas Company just published, it appears that the cost of producing the gas in 1855, was 66,968*l.* 3s. 3d.; the general expenses being 17,658*l.* The total receipts for the year, notwithstanding the decrease in the price of gas for six months, from 4s. 6d. to 4s. were 129,970*l.* 1s. 4d.; the total increase on the year being 5,858*l.* The increased consumption of gas during the year was 30,000,000 cubic feet. The shareholders will receive 10 per cent. dividend as usual, but the public, the directors hint, must not expect any further reduction for some time to come. They do not seem to want any more increases of 5,858*l.* per annum: indeed, this is actually the fact; they dare not divide more then 10 per cent. among them, and so have no farther interest in reducing the price, and thus increasing the profits.——It is in contemplation to erect new gas works on a more extended scale, at Chipping Norton, the present being found inadequate to supply the requirements of the town. ——At the annual meeting of the Kirriemuir Gas Company just held, the usual dividend of 8½ per cent. was declared payable on the 1st of August. As the rates paid for coal continued extremely high, it was said, no reduction in the price of gas was recommended at present.

NORWICH SCHOOL OF ART.—The annual distribution of prizes to the pupils of this institution took place on Thursday evening before last, at the school, the Mayor, Mr. J. G. Johnson, presiding. The walls were hung with the drawings and designs of the successful competitors, which were inspected with considerable interest by a number of the friends and supporters of the school. The Mayor, in opening the proceedings of the evening, said he was happy to state that at last the vexed question of the relations of the school with the corporation was settled: at their last meeting, the town council determined to make the school a corporate school, and, therefore, they might regard it as established so long as the corporation remained. The council had, moreover, pledged themselves to find the school a building, and they would shortly become their landlords. He trusted that the council would become something more,—their patrons; and that the example so liberally set by Mr. Chamberlin and Sir Samuel Bignold would be followed by succeeding mayors. It was always desirable to keep alive that love for art which distinguished a great and lasting, from an ephemeral people. To make a people something more than a mechanical, and pounds, shillings, and pence people, they must be made an artistic people, and that could only be done by an artistic education. Without depreciating former masters, he thought they had been fortunate enough to secure the services of gentlemen who had taken a lively interest in the welfare of the school: he would venture to say that no master had taken a more personal interest in the success of the students than Mr. Nursey. The Rev. A. B. Power read the report of the committee for the past year, which stated that the number of students had steadily increased in all the classes, and that a marked improvement was especially evident in the special ladies' class, which now comprised twenty-nine, against seventeen last year. The meeting was afterwards addressed by Sir S. Bignold, M.P. who delivered the prizes, and by other gentlemen present.

ROYAL NAVAL FEMALE SCHOOL.—The establishment at Richmond having been found too small for the accommodation of the increasing number of pupils, the committee have been for a long time looking out for new premises, and at length have come to an arrangement for the purchase of St. Margaret's Mansion, on the banks of the Thames, and about seven acres of the adjoining land, from the Conservative Land Society, the directors of which, rather than pull down the edifice, have lowered their price on behalf of this excellent institution.

APPEAL CASE AS TO BUILDING UNDER WATER.—An appeal was lately heard in the House of Lords,—William Bush plaintiff in error; and Sir Charles Fox and others, defendants in error.—The proceedings were brought upon a judgment of the Court of Exchequer Chamber affirming a judgment of the Court of Exchequer in an action for the infringement of a patent, dated in September, 1841. The plaintiff, William Bush, claimed to be the patentee of an invention of "improvements in the means of, and in the apparatus for, building and working under water." What he claimed in particular was the mode of "constructing the interior of a caisson in such a manner that the workpeople may be supplied with compressed air, and be able to raise the materials excavated, and to make or construct foundations for lighthouses and bridges." The defendants pleaded that the plaintiff was not the first inventor; that the invention was not a new manufacture, and that the invention was not a new invention as to the public knowledge thereof. The Lord Chief Baron, after testimony led, directed the jury to find for the defendants that "the invention was not one of any manner of new manufacture;" and the Court of Error sustained the direction and the finding. It was now contended that the fact of the new manufacture ought to have been left to the jury, and not made a matter of law by the judge, and that the working under water was sufficient to support the patent. The unanimous opinion of the judges was that the direction of the Lord Chief Baron was right. The plaintiff did not claim the foundations of piers or buildings, but the means of making them, and that was done by means of caissoons, according to the specifications of the patent granted to Lord Dundonald. The Lord Chancellor had no hesitation in advising their lordships to give judgment for the defendants in error. His lordship said he did not mean that the plaintiff might not, by a new specification, establish a title to an invention, but having claimed the air-tight caissoon, which was clearly the invention of another person, his present claim could not be sustained, for the action by means of these caissoons or chambers was precisely the same under water as under land. Judgment for the defendant in error.

FURNACE BRICKS.—Mr. David Hill, of Tipton, Staffordshire, has patented a material for resisting fire, consisting of limestone and ironstone, or the cinder from furnaces, melted together, and cast into moulds.

INSTITUTE OF BRITISH ARCHITECTS.—A special general meeting was held on Monday evening, the 14th instant, to consider and decide respecting the removal of the Institute from the rooms now occupied to certain localities named. No decision, however, was come to.

THE LATE MR. GEO. GWILT.—In your notice of my late brother (*Builder*, July 12), there is an error in the date of his birth, a correction of which, for accuracy's sake, you may like to correct. He was born on the 8th February, 1775, and therefore in his 82nd year.—JOS. GWILT.

CAEN WHARF, ROTHERHITHE, LONDON.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts, 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lobe-tables, chiffoniers, consoles, &c.; baths baptistries, altar-tablets, sill-sters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

SLATE CISTERNS, SINKS, and every description of Slate Slab Work, best Bangor Roofing Slates or Coverings.—T. B. HANNAFORD'S Priced-list, which can be had on application, will be found lower than any other. Roofs covered with best Bangor Countesses within a four-mile circle, 21s. per square.—Prevalgn Wharf, Ratcliffe-cross.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, blue and green, of the usual sizes, which they are prepared to supply on the usual terms, for shipment from their depôt, at Bangor, or to transmit by railway. Also Slabs of all sizes Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

11 George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days – Made and sold by JOHN BAZLEY WHITE and BROTHERS, Mill ank-street, Westminster

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement that requires no colouring, –Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers); to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT, Messrs. ROBINS and Co. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS.–The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 30, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKS.

Agents in London, Messrs. GEORGE POTTER and CO. Limemerchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 19, North-wharf-road, Paddington.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality, Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign use, at wholesale orders, on advantageous terms. Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 62, Moorgate-street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

PORTLAND and BATH CEMENTS. TATHAM and CO. 14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT. Glazed Stoneware Sewage Pipes. Brick, Lime, and Cement Merchants, TATHAM and CO. 14, South Wharf, Paddington.

PARIAN CEMENT, reduced to 3s. per bushel, from 1st inst. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by O. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 3, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GREY STONE LIME WHARFS, 19, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

Agricultural draining Tiles, from 1½ inch to 6 inches in the bore, and Arch Bricks suitable for sewerage. The whole of the above may be inspected in large quantities on the ground, at the Brentwood Railway Brick and Tile Works and Wharf, Brentwood, Essex, adjoining the goods station of the Eastern Counties Railway Company, where they will load direct into the trucks for any station on the line.—Address, Mr LEVETT, Brentwood, Essex.

FIRE-BRICKS, LUMPS, TILES, &c.—FURNACE-BUILDERS, GAS COMPANIES, and CONSUMERS of these Goods generally may be SUPPLIED with every description from our Wharf here, on the most advantageous terms.—TRAQUAIR and CO. 9, Bankside, Southwark.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for hearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented

HENRY MOUNT, Sec.
37, King William Street, City.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c. Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Coloured for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent Staffordshire

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on any description of building, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile, and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.

This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.

Price 4d. each tile (of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles (delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Ruabv.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the TRADE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 281, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

H. and R. HAYWOOD, Brownhills Blue Metallic Tileries, near Burslem, Staffordshire; London Depôt, 15, South Wharf, Paddington, Manufacturers of improved Plain and Ornamental Roofing, Ridge, and Flooring Tiles, for Churches, &c.; also Metallic Plain and Socket Sewerage Pipes, &c. and Socket for Railway purposes. They are extensively used on the London and North Western, Great Western, Trent Valley, North Staffordshire, and other Lines of Rail, and highly approved Warranted impershable, and to resist all acids and exhalations.

"‡" A FIRST-CLASS MEDAL was awarded to H. and R. HAYWOOD, by the Jury of the GREAT EXHIBITION.

WILLIAM GILBERT, Manufacturer of all kinds and colours of Tiles, Quarries, Drain-pipes, Moulded Bricks, Brackets, Vases, Chimney-pots, Stoneware Glazed Sewerage Pipes, Ornamental Quoins, Blocks, &c. Tividale, Staffordshire.

HOGG'S GARDEN EDGE TILES.—The attention of persons engaged in laying out Gardens for Public Institutions is solicited to these Tiles, as an elegant, cheap, and perfect substitute for box edging In colour they resemble Bath stone, are very hard, easily laid down, afford no shelter for vermin, and act as a drain to the paths. Price 13s. per 100, or about 1s. per yard run. – Full particulars on application to R. BLACKETT, Witham, Essex.

PAINT, certified by the Government Engineers and Contractors to be the CHEAPEST and BEST ever discovered for wood and iron, price 35s. per cwt.—Apply to the London Anti-Oxide Paint Company, D. WALKER, Secretary, 29, New Bridge-street, Blackfriars.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 6lbs of Wolston's Torbay Iron-Paint will effectually cover as much surface as 112lbs. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all priming purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Charlemont's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

EXTENSIVE REDUCTION IN PRICES.

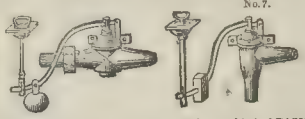
Ditto .... 48s per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.



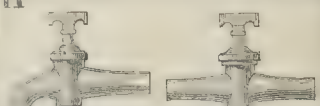
By the introduction of the vibrating standard, the cumbrous carriage and expansion-rod are found to be unnecessary, rendering the price considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

No. 7.



is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common ones. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

MACINTOSH INDIA-RUBBER WAGGON COVERS, at reduced prices. Stocks of different

sizes ready made, open to inspection at their Warehouse, MOSES, SON, and DAVIS, 11 and 12, Aldgate-High-street, and at the Factory India-Rubber Steam Works, Bow-common.

CHAS. MACINTOSH and CO. Patentees

of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF AIRTIGHT and ELASTIC INDIA-RUBBER Goods beg to solicit the persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and 64, Dale-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted by parties who have no interest in the vendors of India-rubber goods, and deal in articles not of the manufacture of CHAS. MACINTOSH and CO.—Goods manufactured by CHAS. MACINTOSH and CO. are stamped, each piece, with the name of the firm.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the

Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.

"Second Testimonial.—March 14th, 1856.—In reply to your letter, received this morning, I feel pleasure in stating that the Gutta Percha Tubing for Pump Service I ordered of you has given entire satisfaction, and answers perfectly. Many Builders, and other persons, have lately examined it, and have stated the advantages of its use over the old lead laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

HOSE PIPING.—WAITHMAN'S

PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO., Bentham, Lancaster.

CLOSET BASINS, WHITE and BLUE URINALS, &c.

MANUFACTORY—MILLWALL.

DEPOT:

ARTHUR-STREET, NEW OXFORD-STREET.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles distributing with powerful flush over the surface of the basin, a supply or quantity of water that is noiseless, modest, and totally prevents waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references to the highest respectability can be had, and from specimens which may be seen at and upon the Premises of the Patentee, W. PATTEN, 141 Fish-street, near St. Paul's, London.—Price for the Set and Apparatus complete, from 25s. and perfect action guaranteed.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSSE'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where purchasers may select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THREE FULL TRADE CHEAPER Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS. — JEFFERY, ALLEN, and CO. feel sure that the trade may have a large selection of their goods at their new premises, of all qualities, at the very low prices they are now offering them. Their best papers, which in quality, style, and colouring, are equal to any that can be manufactured, J. J. A. and Co. are the sole proprietors of the Gutta Percha Paper, which cannot be equalled for damp walls.—Factory, 16, Whitcomb-street, Saint Room, 600, Oxford-street.

PAPER-HANGINGS.—To BUILDERS, PAINTERS, and the TRADE generally.—HALL, DIXON, and CO. Manufacturers, London, beg to call the attention of the trade to their immense STOCK of PAPER-HANGINGS, at No. 1, Oxford-street, to which is considered of both Flocks, Velvets, Satins, Marbles, Granites, and Much Woods. The whole being their own manufacture, can supply on the very best terms.

TO ARCHITECTS, BUILDERS, AND THE TRADE IN GENERAL.

THE ADAMANTEAN CLINKER, especially adapted for paving stables, yards, or any place where durability, neatness, and economy are studied—Price, in the Truck at King's-cross Station, Great Northern Railway, 3s. per ton inland.

N.B.—For samples, and further information, apply to Mr. S. DYBALL, Architect and Surveyor, 3, Steelhe, Bucklersbury, London; Mr. TOWERS, Builder, Richmond-street, Surrey; and to Mr. HINSON, at the Works, Little Bytham Station, Great Northern Railway.

FOR ABSOLUTE SALE.—THE EXTENSIVE SHIP-BUILDING ESTABLISHMENT AND IRON WORKS OF MR. C. J. MARE, AT BLACKWALL.

MESSRS. FULLER and HORSEY, in conjunction with Messrs. FULLEN and SON, are instructed by the Assignees with the consent of the Mortgagees, to OFFER for SALE by AUCTION, at the MART, on WEDNESDAY, the 20th of JULY (unless an acceptable offer be previously made by private contract), in ONE LOT, the extensive SHIP-BUILDING ESTABLISHMENT and IRON WORKS of Mr. C. J. Mare, together with the whole of the valuable fixed PLANT and MACHINERY. These works, which together occupy a site of 14a. 3r. 30p. are situated at Blackwall, on the opposite banks of Bow-creek at its junction with the Thames, a portion of the works having a direct frontage next the Thames. The land frontages abut on Trinity-road and Orchard-place, Blackwall, and on the North Woolwich Railway, near the junction to the Victoria Dock Line, by means of which, and the North London Railway, direct communication with the northern and midland districts is established. The approach from the City is easy and frequent throughout the day, by the Blackwall and North Woolwich Lines, from their joint terminus in Fenchurch-street, by means of which the northern and southern division of the works are reached within half an hour; there is also a ferry across Bow-creek for the facility of communication. The resources of the establishment for the purposes of ship-building, conversion of iron, and general engineering works are unequalled in the world, upwards of 40,000 tons of shipping having been built and fitted in the period of 1854 from these yards, while from the forge and iron rolling mills works upwards of 17,000 tons of iron have been hammered and rolled within the same period, and from the foundries upwards of 3,000 tons of castings delivered. The high character of the work executed has gained for the firm a world-wide reputation. In the Ship-building Department, vessels have been built for the English, Turkish, Russian, Spanish, and Sardinian Governments, the Peninsular and Oriental, the General Screw, and the General Steam Navigation Companies, the Peter Mull Packet Company, the South-Western Railway Company, and others, unequalled in size, unsurpassed in speed, and without a failure in any one case. Among others may be named the renowned *Himalaya*, of 3,500 tons burthen, the *Peninsular*, the *Iberia*, the *Argo*, the *Ceylon*, the *Golden Fleece*, the *Golden Horn*, the *Indiana*, the *Jason*, the *Ivet e Emerald*, the *Genoa*, the *Trinacl*, the *Perseverance*, with many others; also yachts for the Emperor of Russia and his Highness the Viceroy of Egypt; and such are the appliances and facilities afforded by these extensive premises, that the engines with which the works are carried on is perfectly surprising. The works executed at the forge have been equal in magnitude, including crank shafts upwards of 20 tons in weight, and forgings of the largest description for the principal engineers in London, the total weight of hammered iron produced in one year exceeding 4,000 tons. The Engineering Departments have executed a considerable portion of the Britannia Tubular Bridge, upwards of 1,001 tons of wrought-iron bridges for the East-India Railways, the wrought-iron bridge for the North Kent Railway, the beautiful iron roof for the terminus of the Blackwall Railway, and the portion of the iron work at present completed for the new bridge at Westminster; while in the Boilermakers' Department, marine boilers, equal to 4,000-horse power, can be produced annually.

The principal buildings are on the freehold portion of the property, and have been erected in the most substantial manner; they include the hammer and rolling-mills, the foundries, engineers' shops, boiler-shops, and press and pattern makers' shops, and are fitted with five Nasmith's hammers from ten cwt. to five tons, the two larger ones having double furnaces, and thus affording a two-fold capacity; two tilt hammers, three sets of rolling mills for plates and bars, worked by condensing steam-engines, equal to 150-horse power; powerful shearing and punching presses, bending rolls, planing and slotting machines, drilling machines, numerous self-acting lathes, several of which are adapted for the heaviest work; smiths' forges, plate, angle, and bailing furnaces; fitters' lathes and tools, &c. The whole of the machinery, by the best makers, and with all the modern improvements, a considerable portion new within three years; a spacious boiler-makers' shop, fitted with forge, furnaces, shearing, punching, and drilling machines; steam riveting machine, travelling cranes, &c.; an angle iron shop, with massive shaping plate, furnaces, &c.; a capacious mould loft, a saw mill fitted with timber and deal sawing frames, planing, moulding, and mortising engines, worked by a 60-horse power steam-engine. In the ship-yard are twelve slips for building vessels of the largest tonnage, steam lifting saw-pits, mast house, boat-building and block-making shops, joiners' and carpenters' shops, rigging lofts, stores of various descriptions, offices, and other buildings. The situation of these works affords the greatest facility for the transmit of goods by land and water carriage at the junction of the North Woolwich Railway, and several wharfs next the water side, with powerful cranes one of them being a steam crane equal to twenty-five tons. The proximity of the East India and Victoria Docks is also of great advantage. The transactions of business negotiated by and through the firm during 1854 and 1855 have exceeded 2s. per ton, while the numerous terminii of railways in the metropolis, from which a large quantity of worn rails are annually obtainable, together with the vast accumulation of waste iron from the different manufacturing establishments in London, ensure a constant and sufficient supply of scrap iron for the purposes of the mills and forge on the best possible terms. The construction of these works, the whole of which has been effected within the last fourteen years, has involved an outlay approaching 250,000*l.* expended under the immediate superintendence of a practical man, who shows the formation of an establishment of great extent, enormous in its capabilities, unrivalled in situation, enjoying the highest reputation for the character of the works performed, possessing facilities for the transaction of business unequalled by any, and containing within itself all the accessories requisite to command a large and lucrative trade. The tenure of the property is partly freehold and partly leasehold.

The works may be viewed till the sale, by cards only, which may be obtained shortly, together with printed particulars, of CHARLES LEE Esq. Official Assignee, Aldermanbury; of Messrs. LAWRENCE, SHARPLES, and HOVES, Solicitors, Old Jewry-chambers; of Messrs. NEWTON and EVANS, Solicitors, Wardrobe-place, Doctors'-commons; of Messrs. FULLEN and SON, 80, Fore-street, Cripplegate; and of Messrs FULLER and HORSEY, Billiter-street, London.

TO IRONMONGERS, CABINET-MAKERS, AND OTHERS.

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on TUESDAY, the 22nd of JULY, at ELEVEN, at the SALE-ROOMS, No. 28, Leadenhall-street, in lots, without reserve, removed for the convenience of sale, a STOCK of IRONMONGERY, including 500 locks, wrought and cast hinges, an assortment of cabinet brass work, two tops cut and clear steel, Sheffield and Lancashire tools, sixty Bilston grate-tops, two cast-iron dwarf fire-place register and Rumford stoves, black hollow-ware, two gas chandeliers, and a general assortment of ironmongery.—To be viewed on Monday previous to the sale, when catalogues may be had, at the Rooms; and of Messrs. FULLER and HORSEY, Billiter-street, City.

TO IRONFOUNDERS, IRON MERCHANTS, AND OTHERS.

MESSRS. FULLER and HORSEY are instructed by the Assignees of R. J. Polehaze to SELL by AUCTION, at the AUCTION MART, Bartholomew-lane, on WEDNESDAY, JULY 30, 1856, at TWELVE o'clock, in lots without reserve, 250 tons RED CHERU SHELLS from 7 inches to 10 inches diameter, lying at Woolwich, made from cold blast and Scotch pig iron.—To be viewed in bulk, by permission, two days previous to the Sale. Catalogues may be had at the Mart; of Messrs. ASHLEY and TEE, Solicitors, 7, Old Jewry; and of Messrs. FULLER and HORSEY, Billiter-street, City.

Highly finished Condensing Steam engine, by Nasmith

MESSRS. FULLER and HORSEY are instructed by the First Commissioner of her Majesty's Board of Works to SELL by AUCTION, on ROYAL LAND, Stepney, on THURSDAY, the 7th of AUGUST, 1856, at ELEVEN o'clock, a highly-finished, direct acting, condensing STEAM-ENGINE, by Nasmyth, with 14 inch cylinder, 3 feet stroke, D slide-valve, throttle-valve, and governors, air-pump and two feed pumps, with solid gun-metal eccentric, brass wrought-iron crank, double-surface condenser, and apparatus, made for the Houses of Parliament.—To be viewed on Wednesday previous to the sale, when catalogues may be had, on the Premises; and of Messrs. FULLER and HORSEY, Billiter-street, City.

TO SHIP-BUILDERS, TIMBER-MERCHANTS, and OTHERS.

Important Sale of valuable Oak Timber, in the parishes of Egerton, Shorelam Chel-field, and Farningham, Kent

MR. WM. HODSOLL is favoured with instructions from Sir P. H. Dyke, Bart. and Wm. Waring, esq. to SELL by AUCTION, at the BULL INN, DARTFORD, Kent, on THURSDAY, JULY 24th, 1856, at THREE o'clock, 663 very superior OAK TIMBER TREES, including many of large melmge and excellent quality, lying in various woods in the above-named parishes. Also about 121 oak sellers, 5 ash trees, 9 capital larch, and 3 large beech trees. 80 stacks of oak cordwood, about 4,000 oak-top faggots, 2,030 bavins, 250 bundles of spray, &c. The timber at the property above named may be viewed at any time previous to the sale, and will be shown by Richard Packman, Crockenhill, Eynsford; Philip Taylor, of Hartfield Hall, Chelsfield; and James Dunmull, of Button-street, near Farningham. Catalogues may be had eight days previously at the Inns in the neighbourhood; at the Place of Sale; of the persons who will show the timber; and of Mr. WILLIAM HODSOLL, Auctioneer, &c. Farningham, Kent.

TO BUILDERS, WHEELWRIGHTS, CARPENTERS, and OTHERS.—Saw Mills, Eynsford, Kent.—Sale of a large quantity of valuable Surplus Stock of Timber, &c.

MR. WM. HODSOLL is instructed to SELL BY AUCTION, at the EYNSFORD SAW MILLS, on FRIDAY, JULY 25th, 1856, at ELEVEN o'clock, a quantity of excessingly useful TIMBER, of various sorts, suitable for builders and a variety of purposes: comprising some excellent oak, ash, elm, beech, spruce, and fir balk, and wainscot balk, foreign and English scantling, quantity of English fir, cut into halvings, &c. a variety of slabs, fencing stuff, rails, ash bats, useful wheelers' ware, many hundreds of firewood. May be viewed three days previous to the Sale, and catalogues had one week previously, at the Inns in the neighbourhood; at the Place of Sale; and of Mr. WILLIAM HODSOLL, Auctioneer, &c. Farningham, Kent.

N.B. An Omnibus leaves the Dartford Station on the arrival of the 10 a.m. train from London, for Farningham, which is 1¼ miles only from the saw Mills.

FREEHOLD BUILDING LAND, four miles from the City close to the Forest-gate Station, Stratford, Essex.

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, on MONDAY, JULY 28th, at TWELVE, in fourteen lots, on convenient offer previously made), TEN ACRES of FREEHOLD BUILDING LAND, situate close to the Forest-gate Station, on the Eastern Counties Railway, near Wanstead Forest, and admirably suited for occupation of villa and other genteel residences. The lots will have frontages varying from 50 feet to 80 feet each to well-made roads. May be viewed, and printed particulars had at the Dale and Ould Forest-gate; of D. B. Mapleson, Esq. 2 Kings Arms-yard, Moorgate-street, at the Mart; and of Messrs. H. BROWN and T. A. ROBERTS, 22, Turogmorton-street.

FREEHOLD BUILDING LAND.—CARSHALTON, SURREY, near the Railway Station.

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, on MONDAY, JULY 28, at TWELVE, in Ten Lots (unless an offer be previously made), about TWELVE ACRES of FREEHOLD BUILDING LAND, situate within a few minutes' walk of the Carshalton station, on the Croydon and Epsom Railway, about eleven miles from London. The lots will have frontages varying from 50 feet to 80 feet each, and contain from half an acre to two acres each. The land stands on an eminence, commanding extensive views, is very dry, and desirably situate for first-class residences, the neighbourhood being particularly healthy.—May be viewed, and printed particulars had at the Kilbourne Hotel, Carshalton; of D. R. Seaden, Esq. 2, King's Arms yard, Moorgate-street; at the Mart; and of Messrs. H. BROWN and T. A. ROBERTS, 22, Turogmorton-street.

NO. 5, CASTLE-STREET, HOLBORN-BARS.—120,000 feet of VENEERS. ABSOLUTE SALE.

MESSRS. HARDY have received instructions to SELL by AUCTION, on the PREMISES, on THURSDAY, JULY 24, at TWELVE o'clock, without reserve, in lots, suitable to all classes of buyers, about 120,000 feet of very superior WALNUT, Mahogany, Rose-wood, Bird's-Eye Maple, and Dyewood Veneers.—Catalogues on the Premises; and of the Auctioneers, 33, Castle-street, Holborn-bars.

SOUTHALL, MIDDLESEX.—IMPORTANT to BUILDERS.—An excellent Freehold Residence, seated in park-like grounds, and seventeen acres of rich meadow land, having valuable frontages to the high road, situate close to the station, with immediate possession.

CHINNOCK and GALSWORTHY have been favoured with instructions to SELL by AUCTION, on THURSDAY, JULY 24th at TWELVE, at the MART (unless previously disposed of by private treaty), the important FREEHOLD and small part Copyhold ESTATE, late the residence of Mrs. Sergeant Lawes, situate, near the high road at Southall, comprising a good substantial family residence, with double coach house, delightful pleasure and kitchen gardens, fish-ponds, park like grounds, well timbered, and seventeen acres of superior meadow land in high cultivation; the whole lying in a ring fence and having very valuable build ng frontages. Descriptive particulars, with plans may be obtained of Thos. Brownsing, Esq. Solicitor, 1, Hatton-court, Threadneedle-street; of Mr. Wm. Wales, Plan Surveyor, Great St. Helen's; and at the Auctioneers' Offices, 28, Regent-street, Waterloo-place.

LEASEHOLD ESTATES.

MR. PEAKE is ordered to SELL by AUCTION at the MART, on WEDNESDAY, JULY 30, 1856, at TWELVE o'clock, in lots, several LEASEHOLD ESTATES, situate in Southwark and Bermondsey, producing in the aggregate 630*l.* per annum, held at low rents.—Particulars obtained of Messrs. Symes, Teesdale, and Sandilands, Solicitors, 33, Penchurch-street; Messrs. Willoughby, Cox, and Lomb, Solicitors, 13, Cliff's-inn; Mr. Williamson, Solicitor, High-street, Borough; Messrs. Jones and Wright, Solicitors, 9, Lawrence Pountney-hill; Mr. Sunsers, Solicitor, 22, Hare-lane; at the Auction Mart; and at Mr. Peake's Offices, 44, Tooley-street, Southwark.

TO BUILDERS Thirteen capital Brick-built Carcasses, in excellent repair, without reserve.

MESSRS. SPILLMAN and SPENCE will SELL by AUCTION, at the MART, on THURSDAY, JULY 24, at TWELVE, thirteen capital sound CARCASSES for ten and eight room houses, six having shops; also the Brunswick Tavern and substantial and imposing stores, admirably complete, well situate in Brunswick-place, Brunswick-road, and Whittington-place, in the high road, Upper Holloway, near the Archway Tavern.—An undeniable locality—generally held for 99 years, at low ground-rents.—Particulars and conditions of sale at the Mart; of Geo. Carlisle, Esq. Solicitor, 3, Size-lane; James Prichet, Esq. Solicitor, 17, Salisbury-square, Fleet-street; and at the Auctioneers' Offices, 42, Bell-yard, Temple-bar.

Final Portion of the Valuable Stock of Messrs. Browne and Co. University-street, including Marbles, Bronzes, Mosaics, Chimney-pieces, Scagliola Pedestals, a Stained Glass Window, Architectural Casts, &c.

MESSRS. RUSHWORTH and JARVIS beg to announce that the SALE of the final portion of the valuable STOCK of Messrs Browne and Co. will take place on WEDNESDAY, the 30th of JULY, and two following days, at the GALLERIES, University-street, and will include VASES, STATUES, and GIRANDOLES, in marble and stone, adapted for gardens and pleasure grounds; two white marble baths from Venice, a quantity of Parian statuettes, chimney-pieces of various designs; many very beautiful statuary and rich coloured marble chimney-pieces designed with great taste and executed by first-rate artists, including a superb chimney-piece, five feet by six feet of scagliola, in pebble tints cameo'd ra, brackets, and ornaments; a collection of valuable ancient casts, from celebrated originals, worthy the attention of builders and architects; also a variety of objects of taste and utility, being the last portion of this well known and tastefully-selected assemblage. May be viewed two days prior to the sale, and catalogues had, on the Premises; and at the Offices of Messrs. Rushworth and Jarvis, Saville-row, Regent-street; and 19, Change-alley, Cornhill.

WEYMOUTH.—TO BE SOLD BY AUCTION, BY

MR. MILLEDGE, on WEDNESDAY, the 27th day of AUGUST, 1856, at LUCE'S ROYAL HOTEL, Weymouth, at THREE o'clock in the afternoon (unless an acceptable offer shall be previously made by private treaty), by one lot of the exceedingly desirable Within Tarte-le Leaf Contract MARINE VILLA RESIDENCE, with garden, hothouses, and greenhouses adjoining, forming a most unique and retired residence, admirably adapted for a small family, and combining the advantages of entire seclusion and privacy in the midst of the varied society of this salubrious watering-place. The house, which was built five years ago with much taste and regardless of expense, stands in a pleasure-ground of above an acre, elegantly laid out with well-selected flowers and shrubs. One of the sitting-rooms opens into a conservatory 25 feet by 12, stocked with choice and rare plants. The furniture and plants may be taken at a valuation, at the option of the purchaser. The property is in the occupation of the late William Turtle, Esq. and his Court.

At the same time will be Sold, in separate lots, a Dwelling, with spacious store-rooms, used as a gardener's residence, and Sittings in St. Mary's Church.

The residence and pleasure ground are held in fee, the garden for one life, and the dwelling-house, store-rooms, and sittings for terms of years.—The property may be viewed by written orders only, to be obtained from Messrs. Downes, Phelps, and Bennett, 14, Red Lion square, London; or Mr. Milledge, Auctioneer, &c. 4, Frederick place, Weymouth, from whom further particulars may also be obtained.

HAMMERSMITH; CHANCELLOR-ROAD.—Ten small-sized Residences, nearly ready for occupation, and Five unfinished Houses adjoining.

MR. ROBINS will SELL by AUCTION, by direction of the mortgagee, at the AUCTION MART, on THURSDAY, JULY 24, at TWELVE, in separate lots, TEN pleasant, small-sized RESIDENCES, nearly ready for occupation, being from No. 11 to 20, both inclusive, and FIVE UNFINISHED HOUSES, Nos. 21 to 25, near the railway, in the Chancellor-road, Hammersmith a short distance from the church and Broadway, and near steam-boat communication. The houses offer excellent accommodation for moderate-sized families and are held direct from the freeholder for about eighty years, at low ground-rents.—May be viewed daily, and particulars had at the Castle-tavern, Hammersmith; of J. Adonis, Esq. Solicitor, 27, Montpelier-place, at the Auction Mart; and at Mr. Robins's Offices, Covent-garden.

KENSINGTON-PARK, NOTTING-HILL.—Most important and eligible Plots of Freehold Building Land, in this admired Locality: the Roads and Sewers formed.

MR. ROBINS is instructed to SELL by AUCTION, at the MART, on THURSDAY, JULY 24, at TWELVE, in several lots, FREEHOLD BUILDING LAND, of an extremely attractive and important description, intended to form both sides of the Sussex road, leading from the Ladbroke-road: also a continuation of Clarendon-road North and Somerset-terrace, at Kensington-park, Notting-hill. The great beauty and advantages of this much-admired locality have been most capably described by the auctioneer, who directs it to be the plan for a building operation, which is now rapidly advancing towards successful completion, 14 houses having been already nearly finished, some in the vicinity. Residences of a superior character have been erected, and are in course of being finished. A planoeat the public will at once see the extreme eligibility of the land now offered for sale with the most beautiful part of the estate, and the advantages to be derived from assisting to carry out the original scheme. The roads and sewers will be offered in lots of moderate size and value, capable of being subdivided with advantage and profit; and the building public are invited to inspect the plans and correspond. The roads and sewers are already formed and will shortly be finished.—May be viewed, and particulars, with plans, had at the Clarendon Hotel, close to the land; of Messrs. H. and G. Lake and Kendall, Solicitors, 10, Lincoln's-inn-square; at the Mart; and at Mr. Robins's Offices, Covent-garden.

NORWOOD, SURREY.—Capitalists, Speculators, and Builders.

MR. MOXON will SELL, at the AUCTION MART, on TUESDAY, JULY 29, a very desirable FREEHOLD ESTATE, comprising a family residence, known as Camfrau House, with gardens, orchard, and several paddocks, well stocked with fruit trees, situate on a beautiful elevated spot, within a short distance of Norwood Church, a mile from the Crystal Palace, and close to an intended station on the West end and Crystal Palace Railway. The land has important double frontages, and contains very superior brick earth.—Particulars and plans are now ready.—3, St. Martin's-place, Trafalgar-square.

COPTHORNE COMMON, near the Three Bridges Station, on the London and Brighton Railway.

MR. MOXON will SELL, at the AUCTION MART, on TUESDAY, JULY 29th, by direction of the Mortgagee, SIX ACRES of valuable FREEHOLD LAND, eligible for building, three miles from the Three Bridges Station and two from the Reigate Station on the East Grinsted Railway.—Particulars of Messrs. Wadmow and Salmon, 30, Great George street; and of the Auctioneer, 3, St. Martin's-place.

TOTTENHAM Stock of a Builder, excellent Scaffolding, Van, Cart, active Van Horse, and Effects.

MR. A. RICHARDS will SELL by AUCTION, on the PREMISES, near the Plough Inn Tottenham, on TUESDAY, JULY 29, at TWELVE, by direction of Mr. A. G. Fidler, who has discontinued the BUILDING BUSINESS, comprising mahogany plank and board, dry deals, and other woods, planks, boards, and battens, of various thicknesses, oak trees, posts, planks, elm board, new 4-panel and other doors, sashes and frames, mouldings, &c. ironmongery, long scaffold poles, flooring boards and boards for hoarding and navigators barrows, variety of materials, implements, &c.—May be viewed the day preceding and morning of sale.—Catalogues obtained on the Premises, and of the Auctioneer, Tottenham.

THE CHE-TNUTS, TOTTENHAM, MIDDLESEX.—Valuable Freehold Building Land, with extensive frontages, land-tax redeemed.

MR. A. RICHARDS will SELL by AUCTION, at GARRAWAY'S, on TUESDAY, AUGUST 5th, at TWELVE o'clock, in one lot (unless previously disposed of by private contract), FOUR EIGHTH PARTS or SHARES of a very eligible FREEHOLD BUILDING LAND, in an excellent situation, near Tottenham High Cross, between the Great Eastern Tottenham Railway Station, having frontages to the Broad Road and Down-lane. A road can be formed through the estate, which would be the principal thoroughfare to the railway station. The estate is within 2 miles of Bishopsgate, and contiguous to the railway, presents a very favourable opportunity for a building speculation, there being a great demand for respectable residences in the above locality, viewed seven days previous to sale. Particulars may be obtained of Edwd. Stanford, Esq. Solicitor, 7, Sackville street, Piccadilly; at Garraways; and of the Auctioneer, Tottenham.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, July 19, 1856.

THE NEW SOCIETY of PAINTERS in WATER COLOURS WILL CLOSE their Twenty-second Annual Exhibition on SATURDAY next, the 26th JULY. Now open, at their Gallery, 53, Pall-mall, near St. James's Palace, daily, from Nine till dusk. Admission, 1s.; Season Ticket, 5s.
JAMES FAHEY, Sec.

BUILDERS' BENEVOLENT INSTITUTION.—The NINTH ANNUAL MEETING of the Subscribers and Friends of this Charity will be held at the London Tavern, on THURSDAY next, the 31st inst. at THREE o'clock in the Afternoon—CHARLES LUCAS, Esq. President, in the chair—to receive the Report for the past year; to elect the President, Treasurer, Directors, and Auditors for the year ensuing; and other matters connected with the welfare of the Institution.
A. G. HARRIS, Secretary.
24th July, 1856.

EXHIBITION of ART-TREASURES of the UNITED KINGDOM, to be OPENED at MANCHESTER in MAY, 1857.

PATRONS.
Her Majesty the QUEEN.
His Royal Highness Prince ALBERT.
PRESIDENT.
The Earl of ELLESMERE, K.G. Lord-lieutenant of Lancashire.
EXECUTIVE COMMITTEE.
Thomas Fairbairn, esq. Chairman.

The Mayor of Manchester.	Joseph Heron, esq.
Thomas Ashton, esq.	Edmund Potter, esq.
William Entwisle, esq.	Sigismund J. Stern, esq.

GENERAL COMMISSIONER.—John C. Deane, esq.

The object of the proposed exhibition is to secure a collection of the choicest and most instructive works which illustrate the Ancient and Modern Schools of Art Oil Paintings, Water-colour Drawings, Engravings, Sculpture in Marble and Stone, Carvings in Ivory and Wood, Bronzes, Coins, and Works of Artistic Excellence, in Gold, Silver, Steel, or Iron, in Glass and Earthenware, Terra Cotta and Plaster, will necessarily constitute the main features of the Exhibition.

The Executive Committee respectfully invite communications from possessors of Art Treasures who may feel interested in the success of a scheme which aims at the worthy illustration of the art-wealth of the United Kingdom.

From the known catalogues of the resources of the country, thus extended, the committee propose, with the assistance of the makers of acknowledged competency, to make such a selection as will enable them to place before the world an Art Exhibition not less valuable to the student from its chronological arrangement, than attractive to the public from its beauty and completeness.

The committee do not desire to elicit from manufacturers specimens of their productions, either for competition or sale.

The Exhibition Building will be erected on a site adjoining the Botanic Gardens, distant about two miles from the centre of the City, and quite free from atmospheric impurities. Great consideration has been given to the mode of lighting the halls for the display of pictures and sculpture, and every precaution will be taken to protect the works of art from injury.

In all cases where desired by the owners, the Committee will insure the art treasures contributed.

There will be railway communication from all parts of England, direct to the Exhibition Building, and contributions will be received from, and returned to their owners, free of expense.

Communications may be addressed to the Chairman, 100, Mosley-street, Manchester.—By order of the Executive Committee,
CHARLES B. MINCHIN, Secretary.
Offices of the Exhibition, 100, Mosley-street, Manchester.

COMPETITIONS.

PRIZE ESSAY on CANALS.—A PREMIUM of 100*l.* will be given by the Committee of the Canal Association to the Author of the BEST ESSAY on the PRESENT CONDITION and FUTURE PROSPECTS of CANALS and CANAL CONVEYANCE; with Suggestions as to the Points to which attention, with a view to improvement, should be principally directed. The Essay must be sent in on or before the 31st DECEMBER, 1856, to the Honorary Secretary, from whom further particulars may be had on application.
THOMAS WILSON, Hon. Sec.
Aire and Calder Navigation Office, Leeds, 1st July, 1856.

COMPETITIONS.

TO ARCHITECTS.—Weston-Super-Mare Improvement and Market Act, 1842 and 1851.—The Commissioners acting under and by virtue of the above Acts of Parliament are prepared to receive PLANS and SPECIFICATIONS for the ERECTION of a new TOWN-HALL over their Market-place, the cost of such building not to exceed 2,000*l.* A plan of the ground, if required, may be obtained by application to the Clerk. The drawer of the plan approved by the Commissioners will receive a premium of fifteen guineas, such plan to be the property of the said Commissioners. Plans must be sent, free of carriage, to the Office of the Clerk, No. 5 South Parade, Weston-super-Mare, aforesaid, on or before the 8th day of SEPTEMBER next.
WILLIAM SMITH, Clerk to the Commissioners.
Dated, Weston-super-Mare, July 18th, 1856.

CONTRACTS.

TO BUILDERS.—TENDERS are required for ERECTING a WAITING-ROOM and OFFICES attached at No. 27, Lower Shadwell. The drawings and specification may be seen at the Office of the Architect, 35 Bloomsbury-square, on and after MONDAY, the 28th instant. Tenders to be sent under Mr. WILLIAM PAGE, 3, Cross-lane, St. Mary-at-Hill, on or before FRIDAY, the 1st AUGUST. The lowest Tender will not necessarily be accepted
WILLIAM MUNT, Architect and Surveyor.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London district hereby gives Notice, that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall mall, on or before the 6th of AUGUST next, for BUILDING a STABLE and SUPPLYING a TANK to contain 10 000 gallons of water, at the Wellington Barracks, St. James's-park. Printed schedules and forms of Tender may be obtained at the Royal Engineers' Office, 11, James-street, Pimlico, between the hours of TEN and THREE o'clock, from the 23rd of JULY to the 5th of AUGUST next inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.
Royal Engineers' Office, 11, James-street, Pimlico,
18th July, 1856.

NOTICE to BUILDERS and CONTRACTORS.—WAR DEPARTMENT WORKS. Sealed TENDERS for the ERECTION of a FORT and BARRACK at Mount Tourville, Alderney, will be received by the Director-General of Contracts, War Department, Pall-mall, London, on or before the 30th day of SEPTEMBER next, after which date no Tender will be received. Detailed drawings may be seen, and every requisite information obtained, at the Royal Engineer's Office, Alderney, from the 7th to the 31st of AUGUST next, and at the Office of the Inspector-General of Fortifications, War Department, Pall-mall, from the 1st to the 31st of SEPTEMBER next. The terms of contract, specification for the works, and forms of Tender, can be procured at the Office of the Director-General of Contracts, War Department, Pall mall, London, and at the Royal Engineer Offices at Guernsey and Alderney. Each Tender forwarded must be attached to a copy of the terms of contract and specification. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders. Tenders for the above work to be addressed to "The Director-General of Contracts, War Department, Pall-mall, London, and endorsed "Tender for Erecting a Fort and Barrack at Mount Tourville, Alderney."

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The principal Officers of Her Majesty's War Department hereby give Notice, that they will receive PROPOSALS for the following CONTRACT, viz.:—For the several works proposed in the ERECTION of ADDITIONAL BUILDINGS, together with other Additions and Improvements at the BARRACKS at BUGGAR'S BUSH, DUBLIN. Persons desirous of Tendering for the same, will receive every information on application at the District Commandant Royal Engineer's Office, Lower Castle-yard, Dublin, and may obtain specifications with the terms of Contract. The Soldiers' Quarters, Cooking-house, and Hospital to be completed on or before the 31st MARCH, 1857, and the remainder of the works on or before the 31st AUGUST, 1857. The letters of Tender with specifications to be sealed, and transmitted under cover to "The Director-General of Contracts, War Department, Pall-mall, London," so as to be received on or before the 5th day of AUGUST, 1856, and to be marked on the outside, "Tender for Works at Buggar's Bush Barracks, Dublin."
Commanding Royal Engineer's Office, Dublin,
July 17, 1856.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Director-General of Contracts, at the War Department, Pall Mall, London, on or before MONDAY, the 8th SEPTEMBER next, from all persons desirous of CONTRACTING with the War Department for the ERECTION of a MILITARY HOSPITAL, at NETLEY, in the parish of Hound, in the county of Southampton. Plans and specifications of the work may be seen, and forms of Tender, and every other necessary information obtained, on application at the Surveyor's Office at the War Department, Pall-Mall, London, till the 6th SEPTEMBER, Sundays excepted, between the hours of NINE AM and FIVE PM. The site may be inspected, and information obtained on application to MAJOR RAVENHILL, Commanding Royal Engineer, Netley-cliff; or at the Royal Engineer's Office on the ground. The person whose Tender may be accepted, will be required to enter into a bond with two eligible sureties, jointly and separately to be bound under a penalty of 10,000*l.* for the due performance of the Contract. Tenders to be addressed, "The Director General of Contracts," War Department, Pall-Mall, London, and to be delivered free, endorsed, "Tender for Works for Military Hospital, Netley." No Tender can be admitted after the said 8th SEPTEMBER, 1856.
N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
R. O. MENNIE, Surveyor.
War Department, Pall-Mall, July, 1856.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall-mall, London, on or before the 6th of AUGUST next, for PAVIATING and BUILDING FOUNDATIONS and BASEMENT STORY, up to plinth, of the Barracks to be erected at the Foreign ground, Kensington. Printed schedules and forms of Tender may be obtained at the Royal Engineers' Office, 11, James-street, Pimlico, between the hours of TEN and THREE o'clock, from the 31st of JULY to the 5th of AUGUST next, inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.
Royal Engineers' Office, 11, Jame-treet, Pimlico,
22nd July, 1856.

NOTICE to BUILDERS and CONTRACTORS.—ROYAL ENGINEER CONTRACT. The Commanding Royal Engineer of the Woolwich District hereby gives Notice, that sealed TENDERS, in one sum, will be received at the Office of the Director-General of Contracts, Pall mall, London, on the 30th of AUGUST, 1856, from such persons as may be desirous of CONTRACTING for the ERECTION, at Shoeburyness, of a HOSPITAL, with the necessary out-building, enclosure wall, &c. of quarters for the Hospital steward and four staff-sergeants, and of a quarter for the Assistant Superintendent of Experiments; also for an extension of the present gun-shed, and the erection, contiguous thereto, of a store and offices. The specification and drawings may be seen, on application at the Royal Engineer Office, Grand Depot, Woolwich, between the hours of TEN and FOUR, up to the 6th AUGUST, 1856, inclusive. The War Department reserves themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Grand Depot, Woolwich,
15th July, 1856.

ROYAL ENGINEERS' CONTRACTS.—WAR DEPARTMENT.—The War Department being about to enter into a CONTRACT for ALTERATIONS and ADDITIONS to certain portions of the ROYAL ARTILLERY BARRACKS, at Woolwich, such persons as may be desirous of Tendering for the same may receive information thereto by applying to the District Clerk of Works, at the Royal Engineers' Office, Grand Depot, Woolwich, between the hours of TEN and FOUR, up to the 6th of AUGUST, 1856. Tenders to be delivered at the Office of the Director-General of Contracts, Pall-mall, London, on the 13th of AUGUST, 1856.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

AMBERGATE, NOTTINGHAM, and BOSTON and EASTERN JUNCTION RAILWAY and CANAL COMPANY.—To CONTRACTORS.—Notice is hereby given, that the Directors of the above Company will meet at their Office, Peterborough, Northamptonshire, on MONDAY, the 4th day of August next, at ONE o'clock in the afternoon, to receive TENDERS for the ERECTION of STONE PIERS, ABUTMENTS, and WING WALLS, ready to receive the wrought iron girders for a bridge to cross the Midland Railway and old Trent-lane, at Sneinton, near Nottingham, having a centre opening of about 30 feet, and two side openings each of about 20 feet, measured on the skew face. Drawings and specifications may be seen, and further particulars obtained, upon application to Mr. UNDERWOOD, the Engineer, at the Office of the Company, on or after the 29th instant. Bills of quantities, with the form of Tender, will be furnished upon payment of one guinea. All Tenders must be sealed and addressed to the Secretary. No Tender will be received after TWELVE o'clock at noon of the said 4th day of AUGUST.—By order,
JNO. GOUGH, Secretary.
Company's Offices, Nottingham, July 17, 1856.

TORQUAY WATERWORKS.—The Local Board of Health hereby give notice that TENDERS for the SUPPLY of about 600 TONS of CAST IRON PIPES, &c. of various sizes and weights, specified in the plans are requested for inspection at the Townhall, Torquay, the usual residence of the Engineers, Messrs. EASTON and AMOS, Grove, Southwark, London. Sealed Tenders, addressed to the undersigned, to be delivered at the Townhall, Torquay, on or before TWELVE o'clock on TUESDAY, the 5th day of AUGUST next. The Local Board do not bind themselves to accept the lowest or any Tender.
GEO. E. HEARDER,
Torquay, Devon, 19th July, 1856. Clerk to the Local Board.

TO BUILDERS.—Parties who are willing to TENDER to BUILD a HOUSE for R— W—, Esq. Surgeon, at Heale-de-green, Harewood, will learn, by calling, as the plans, &c. are Mr. THEBERTON'S, Joiner's shop, Heale-de-green, between the hours of TEN and FOUR, from the 26th of JULY to the 1st of AUGUST (both days inclusive), where further information will be given.
Kemsall-green, Harewood, 1856.

TO BUILDERS.—Persons willing to CONTRACT for the ERECTION of a PARSONAGE-HOUSE in Saint Michael's Parish, Lichfield, may see the drawings and specification on and after MONDAY, the 28th inst. at the Offices of the Architect, Mr. JOHNSON, Lichfield. Sealed Tenders, addressed to be sent to Mr. JOHNSON, on or before the 8th of AUGUST. The Committee do not bind themselves to accept the Lowest Tender.

TO BUILDERS.—BLANDFORD UNION. The Guardians of the Blandford Union are in TENDERS from persons desirous of CONTRACTING to BUILD a NEW WORKHOUSE, for the above Union. The plans and specifications for such new Workhouse may be seen on and after the 23rd inst. at the Office of the Union; and all information required can be obtained from Mr. C. G. CREEKE, Architect, Bournemouth, Hants. Tenders to be sent to the Clerk, on or before FRIDAY, the 8th of AUGUST next.—By order of the Board,
W. H. ATKINSON, Clerk to the Union.
Blandford, July 17, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

TENDERS are required for the proposed TAKING DOWN, RE-BUILDING, and REBUILDING of a RAILWAY STATION, and the ERECTION of a SHED to same, for the Stockton and Darlington Railway Company, at Stockton-on-Tees. Parties willing to give in Tenders may inspect the drawings and specifications, and the situations of the Railway Station and Shed, on or at my office in Bradford on and after WEDNESDAY, the 23rd instant, until WEDNESDAY, the 6th day of AUGUST, on or before which day, sealed Tenders are to be delivered at my office aforesaid.—The company do not pledge themselves to accept the lowest or any Tender.

E. MILNES Architect, Bradford York shire.

NEWCASTLE-UPON-TYNE. — QUAYSIDE IMPROVEMENTS.—To BUILDERS, CAPITALISTS, &c. — The Corporation of Newcastle-upon-Tyne having purchased, by virtue of an Act of Parliament, the whole of the property on the Quayside, damaged by the late fire, also a large portion of the surrounding property, for the purpose of improving that part of the town, and having laid out the same into several new streets, which, when built, will form the best business-streets in the town, are now prepared to receive TENDERS for the purchase of the whole or any of the SITES on each side of the Lateral street, No. 1 and also a great portion of the parallel street according to plans and conditions approved of by the Council. The great demand for offices, shops, for wholesale and retail purposes and warehouses, in this particular part of the town will ensure to capitalists a safe and valuable investment. Plans and conditions may be seen on application to the Town Clerk, the Town Surveyor or JOHN DOBSON, Esq. Architect Newcastle-upon-Tyne. Tenders, marked "Tenders for Sites on Quayside," addressed to the Town Clerk, will be received until the 29th inst.

N.B.—A large quantity of old building materials on the ground will be sold to such purchaser of sites as may require the same.

TO BUILDERS and OTHERS. — The Directors of the Commercial Gas Company will meet on FRIDAY, the 1st of AUGUST, to receive TENDERS for the ERECTION of a HOUSE upon the Company's works at Stenney. Plans and specifications can be seen, and particulars obtained upon application to the Company's Engineer on the works, between the hours of TEN and FOUR o'clock.—By order of the Board,

GEORGE JAQUES, Secretary

Stepney 14th July 1856.

NORTHAMPTON IMPROVEMENT COMMISSIONERS.—Notice is hereby given, that the Commissioners for Improving the Town of Northampton will, at their meeting to be held at the Guildhall, on WEDNESDAY, the 30th instant at HALF PAST SIX in the evening, receive TENDERS for the SCAVENGING of the ROADS, and removing of all sweepings ashes, &c within the limits of the said town, for the space of twelve months commencing on the 1st AUGUST next. Security must be given for the due performance of the contract; and the Commissioners do not bind themselves to accept the lowest or any Tender. Specifications, conditions, &c may be seen at the Office of the Surveyor, Wood-street, Northampton, up to the 29th instant. Tenders must be delivered to the Clerk to the Commissioners by TWELVE o'clock at noon of WEDNESDAY, the 30th inst.

TO BUILDERS.—HIGHBRIDGE CHURCH.—Plans and specifications for BUILDING the above CHURCH, may be seen on application to Mr. S. NORTON, at Highbridge, from WEDNESDAY, the 16th, to SATURDAY, the 26th inst.; or at the Office of the Architect, Mr. NORTON 24, Old Bond-street London. Tenders for the works will be received by GABRIEL S. POOLE, Esq. Bridgewater, not later than the 30th instant. The lowest tender will not of necessity be accepted. The site is near the Highbridge Station, on the Bristol and Exeter Railway

TO BUILDERS.—ABERSYCHAN SCHOOLS, PONTYPOOL.—The Ebbw Vale Iron Company hereby invite Builders to submit TENDERS for the immediate ERECTION of SCHOOL BUILDINGS for 800 CHILDREN, with TEACHERS HOUSES attached, at Abersychan. The plans and specifications may be seen on application to Mr. RODEN, at the Company's Office at Abersychan from MONDAY, the 21st inst. till SATURDAY, the 2nd of AUGUST, on or before which day Tenders are to be properly indorsed, and left at the Architect, Mr. NORTON 24, Old Bond street, London. The Company is not bound to accept the lowest or any Tender, unless satisfactory to their Architect.

BOROUGH of LEEDS.—To CONTRACTORS.—WANTED, by the Town-hall Committee of the Borough of Leeds, TENDERS for the ERECTION of a TOWER on the New Town-hall Plans and specifications may be seen at the office of Mr. CUTHBERT BRODRICK, Architect, Leeds, on and after the 28th instant, until sealed Tenders are to be sent in to the Town Clerk's Office, on or before the 12th AUGUST next, addressed "To the Chairman of the Town-hall Committee Tenders for Town-hall Tower." The Committee do not pledge themselves to accept the lowest Tender.—By order,

JOHN A. AIKIN, Town Clerk.

Leeds, 18th July, 1856

BOROUGH of LEEDS.—HOLBECK BURIAL GROUND.—CONTRACT A.—The Burial Grounds Committee of the Council of this Borough are prepared to receive TENDERS for the ERECTION of TWO CHAPELS, TWO LODGES a BOUNDARY WALL, and the Construction of Roads and Approaches to the above named intended Burial Ground. The plans and specifications may be seen, until the Mid-autumn, at the office of Mr EDWARD FILLITER, Borough Engineer and Surveyor 10, Brook-street, Leeds where all Tenders to be sent to the Town Clerk's Office addressed to "The Chairman of the Burial Grounds Committee," not later than TWELVE o'clock at NOON, on FRIDAY, the 1st day of AUGUST next. The Committee do not pledge themselves to accept the lowest Tender. By order,

JOHN A. AIKIN, Town Clerk.

Leeds, July 17th, 1856.

TO BUILDERS and OTHERS.—Notice is hereby given, that plans and specifications for a NEW CHURCH and ALMSHOUSE, in the parish of Bedminster, in the City of Bristol, will be lying at the Offices of Messrs MILES and KINGTON, 61 Queen-square Bristol, on MONDAY, 28th of JULY, and five following days, from TWELVE till FOUR o'clock. All persons willing to CONTRACT for the execution of the Works are required to send in sealed TENDERS, directed to Rev. R. H. W. MILES, 61, Queen-square, Bristol, on or before 12th AUGUST next, ensuing. The lowest Tender, or any, will not necessarily be accepted. The one they will be required to enter into the usual legal bond, with two good and approved sureties, for the due execution of the Works

KING'S LYNN HARBOUR.—The Trustees of this Harbour are prepared to receive TENDERS for the CONSTRUCTION of a new QUAY, in wood, along a new line of frontage side of the harbour. Plans and specifications of the proposed works may be inspected at my office, in King's Lynn, where sealed Tenders are to be delivered or sent by post, on or before the 1st day of JULY next. The Trustees do not bind themselves to accept the lowest or any Tender. By order,

EDWD. LANE SWATMAN, Clerk to the Trustees.

King's Lynn, June 17th, 1856.

SAINT MARY, Newington, Surrey. — To IRONMONGERS and BUILDERS.—The Burial Board of this Parish will meet at the VESTRY-ROOM of the Parish Church, Newington, on FRIDAY, the 1st day of AUGUST next, at TEN o'clock in the morning, to receive sealed Tenders for IRON FENCING with STONE COPINGS, &c. for the Parish Churchyard at Newington. Plans and specifications for the required work may be seen at my office. Sealed Tenders addressed to the "Burial Board of St Mary, Newington," are to be delivered to me on or before THURSDAY, the 7th AUGUST. The Board do not bind them selves to accept the lowest or any other Tender.—By order of the Board,

JOSEPH BURGESS, Clerk.

2, Keene's-row, Walworth, July 19, 1856.

CONTRACTS.

NETHERLANDS LAND INCLOSURE COMPANY.—The Directors of the Netherlands Land Inclosure Company are prepared to receive TENDER for the CONSTRUCTION of a SHIP CANAL to connect the East and West Scheldte, about five miles in length; together with LOCKS and other WORKS. Parties desirous of Tendering are requested to attend at the Office of Mr G. P. BIDDER, and Mr. GEORGE ROBERT STEPHENSON, 24, Great George-street, Westminster, at TWELVE o'clock on TUESDAY, the 29th JULY, in reference to the measurements. The Directors will receive the Tenders on the 30th day of AUGUST, 1856. The Directors do not bind themselves to accept the lowest Tender.—By order of the Board,

GEORGE PASSON, Secretary.

2, Moorgate-street, London, July 19 1856

NOTICE to BUILDERS.—Builders desirous of CONTRACTING for the ERECTION and COMPLETION of ST MATTHEW'S PARSONAGE, Smethwick, can inspect the drawings and specification by application to Mr. RAMSAY, Windmill-lane, Smethwick; and obtain any further information of the Architect, JOSEPH JAMES, Esq. 13 Farnwilliam London. Tenders are to be sent in to the Rev. G. GILBANKS Smethwick, not later than the 4th day of AUGUST next addressed to the Build ng Committee, who do not bind themselves to accept the lowest or any Tender.

WHITECHAPEL UNION.—PROPOSED NEW WORKHOUSE.—The Guardians of the Whitechapel Union having enlarged the time for receiving Tenders, will meet in the Board-room, at the Workhouse, in the Whitechapel road, on TUESDAY, the 19th day of AUGUST next at ONE o'clock in the Afternoon precisely, to receive TENDERS for the ERECTION of the FIRST PORTION of the PROPOSED NEW WORKHOUSE, in Charles-street, Mile End New Town, instead of on the 1st of AUGUST, as previously advertised. Further particulars may be obtained, and the plans and specifications inspected at the offices of THOMAS DUBARRY, Esq. Architect, 15, Lincoln's-Inn-fields, London; and 47, Bedford-street North, Liverpool.—By order of the Board,

G ADAMS FARR, Clerk.

2, Mount-place, Whitechapel, 23th July, 1856.

SHOREDITCH SCHOOL, BRENTWOOD. A Committee of Trustees for the Management of this School will meet in the VESTRY-ROOM, at St Botolph Church, on MONDAY, the 4th day of AUGUST, 1856, at SIX o'clock in the evening, to give PROPOSALS, and CONTRACT for the EXECUTION of certain WORKS, for altering and extending the Laundry, and Dry ng-rooms, and the School, the particulars and conditions of which may be known on application to Mr. T. E. KNIGHTLEY, Architect, &c 33, Canon-street, City. The persons offering Tenders must give the name and address of one or more eligible person or persons, who will become surety for the due performance of the works, in a sum equal to the amount of the Contract. The Trustees will not pledge themselves to accept the lowest or any one of the Tenders. Sealed proposals may be sent by post to me, at Shoreditch Workhouse.

July, 18 6 HENRY EDWARDS, Clerk.

TO IRON-FOUNDERS and GASHOLDER MAKERS.—The Directors of the Tunbridge-wells Gas Company will meet at their offices in Tunbridge-wells, on MONDAY, the 4th of AUGUST next, to receive TENDERS for the SUPPLY and ERECTION upon their Works in Tunbridge-wells, of a CAST IRON GASHOLDER TANK, 60 feet internal diameter, and 15 feet deep, and GASHOLDER, 60 feet in diameter, and 18 feet deep, with inlet and outlet pipes complete. The specification may be seen at the Office of Mr. J. G. BARLOW, 3, Parliament-street, Westminster, the Company's Consulting Engineer on and after the 2nd INSTANT, up to the 2nd of AUGUST; and the Tenders must be sent to, or delivered at the office of Mr J. READ, the Secretary to the Company, in Tunbridge-wells, on or before 8 o'clock, p.m. on MONDAY, the 4th of AUGUST, endorsed, "Tender for Gasholder Tank and Gasholder." The Directors do not bind themselves to accept the lowest or any Tender.

Tunbridge-wells, July 21, 1856.

DEEPING FEN DRAINAGE. — To BUILDERS and CONTRACTORS. — TENDER for WORKS.—The Trustees appointed to carry into effect the provisions of "The Deeping Fen Drainage Act, 1856," will be prepared at their next meeting which will be held at the Great Northern Hotel, in the city of Peterborough, on WEDNESDAY, the 6th day of AUGUST next, at TEN o'clock in the forenoon, to receive TENDERS for the CONSTRUCTION of a NEW SLUICE, with three Drainage openings, and other Works connected therewith, to be erected at the Eastern Outfall of Vernatt's Drain at the junction of the same with the Rivers Glen and Welland, in or near the parish of Pinchbeck, in the county of Lincoln, at a place called the Reservoir. Plans and specifications of the works may be seen at the Office of Mr. LEWIN, the Engineer, Bridge-street, Boston, on and after the 4th day of August next. The Contractors are to be prepared with their Tenders to enter into Bonds at the time of tendering. The Trustees will not be bound to accept the lowest Tender, nor any other, except otherwise deemed eligible.

Dated this 21st day of July, 1856.

By order of the General Joint Works Trustees,

JOHN CARTER, Clerk.

LANCASTER and CARLISLE RAILWAY.—To BUILDERS.—The Directors of the Lancaster and Carlisle Railway will meet at the CITADEL STATION, at Carlisle, on the 6th day of AUGUST, to receive TENDERS for the BUILDING of WORKSHOPS at CARLISLE. The drawings and specifications may be seen at the Office of the Engineer, at Lancaster, on the 23rd of JULY, both days inclusive, and at Carlisle on it from the 30th day of JULY to the 1st day of AUGUST, both days inclusive. Tenders to be addressed to the secretary at Lancaster, on or before the 2nd day of AUGUST, having endorsed on it "Tender for Work shops." The directors will receive Tenders for the works as a whole, or in separate lots, and to not bind themselves to accept the lowest tender. The Company will allow to workmen getting at Carlisle a pass on the Lancaster and Carlisle Railway, to and from Carlisle, once a week. All materials for the work, except stone, bricks, sand, and lime, will be carried free along the Lancaster and Carlisle r.

Lancaster June 17, 1856

TO BUILDERS, CONTRACTORS, and OTHERS.—The Committee for RUILDING NEW NATIONAL SCHOOLS with TWO RESIDENCES, at LUTON, Bedfordshire, are desirous of receiving TENDERS for the ERECTION of the same. The plans and specifications may be seen, and bills of quantities obtained on application at the Office of Mr. J. CUNDLAND, Architect and Surveyor, Luton; and of Mr. C. POLAND, Surveyor, 72, Margaret-street, Cavendish-square, London. The Tenders are to be addressed to the Rev. T. BARTLETT, M.A. the Vicarage, Luton, Bedfordshire, and endorsed, "Tender for National Schools;" and no Tender can be received after TUESDAY, the 5th day of AUGUST next. The Committee do not bind themselves to accept the lowest or any Tender.—Luton, July 24, 1856.

TO BUILDERS.—TENDERS are required by the Committee of the Soldiers' Infant Home for the ERECTION of a SCHOOL-ROOM and DWELLING attached, at Vine House Estate, Hampstead. The drawings and specification may be seen at the office of the Architect, 25, Bloomsbury-square, on MONDAY, the 28th inst., when printed forms of Tender are to be obtained upon the surveyor on their behalf to take out the quantities. Tenders to be sent in on or before TWELVE o'clock on MONDAY, the 4th of AUGUST next, addressed "Tender for School-house, Soldiers' Infant Home," and addressed to Major Fox Hood, R. POWYS, Wellington Barracks. The lowest or any Tender will not necessarily be accepted.

WILLIAM MUNT, Architect and Surveyor.

BENJAMIN FOWLER & CO. GENERAL ENGINEERS, WHITEFRIARS-STREET, FLEET-ST.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the tail of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Cheap and Durable Corn-Bins.

Improved Surface Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

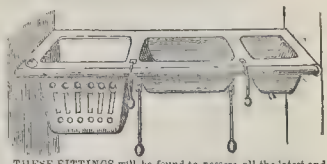
COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES
beyond the current Price of Hoop-iron.



Gauge.	In. wide.	Per 1,000 ft.
No. 16	.. 1½ ..	7s. 0d.
15	.. 1⅝ ..	7s. 6d.
16	.. 1½ ..	8s. 0d.
15	.. 2 ..	8s. 8d.
15	.. 2½ ..	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent that a direct end grain of the iron is presented longitudinally, and which become when built in brick work, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.
London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

BARTON'S PATENT SAFETY STABLE

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc Tube, Steel Spun Wire, Gas Pendants, Brackets, and Joints of all kinds; Furniture fitting, in Brass and Iron; Tin, Composition, Iron, and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

TO ARCHITECTS AND BUILDERS.

HAWKINS'S REGISTERED COPPER and TINNED IRON SASH-CHAIN is greatly approved for its strength, durability, and facility in running over pulleys; and when worked at its warranted load, will be found one of the most useful and efficient inventions for hanging window-sashes of any weight up to 4 cwt.—May be obtained from every respectable Ironmonger in the kingdom. Manufactory, No. 27, Dale-end, Birmingham.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

TO STONEMASONS, BUILDERS, AND OTHERS.

A TRAVELLER for SALE, complete, nearly new, 15 feet long, 4½ feet wide, and 19 feet high, fixed at Stratford, Essex; with about Thirty Loads of Timber in Frame.—For further particulars apply to Messrs. THOMAS GEERE and SON, Timber Merchants, Stratford, Essex.

WOOD-CUTTING MACHINERY,
JOHN M'DOWALL and SONS,
WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow,
MANUFACTURERS of VERTICAL SAW-FRAMES
(driven by straps),
For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.

Patent vertical saw frames, of the foregoing dimensions, with steam-power attached, circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from a ¼ of an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power morising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; sole-board machines, for hat-boxes, &c.; patent silent feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 36 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application.
KING'S-ROAD, CHELSEA.

STONE! STONE! STONE! — To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Scaffold Slab, Granite Pitchings and Curb, Guernsey rockon Road Materials, and every other description of stone, at JOHN KNIGHT and SON'S, Devon Wharf, Mile-end. 3s. 6d. tooled paving, 38s. 6d per 100 Slab; slab for hearths, 4s. per foot sup.; slab for chimney-pieces, 3s. per foot sup.; 6 by 3 window-sills, 6d. per foot run; 13 by 3 coping, 8d. per foot run; box chimneys (any opening), 8s. 6d. each. Terms cash on delivery.

TO CONTRACTORS AND OTHERS.
YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS; Horse-hill, Robin Hood, Park Spring, and Gayley, in Blocks, Headstones, or Slabs; Purbeck Paving, Sinks, Curbs, Rickstones, Pitchers, and Squares; Caithness Flags, Firestone, Newcastle and Bilston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Caen Stone, Bramley Fall, Bath, Huddlestone, Park-wood, and other Block Stones. Valentia Slate Slabs, Bangor Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble, in Block and Slabs, supplied from the Wharfs, Millbank-street, City Basin, and Deptford, also direct from the quarries by vessel or rail—Address, FREEMAN'S WHARF, 27, Millbank street, Westminster.

ROWLEY RAGSTONE and YORKSHIRE STONE, for paving and road-making, at GEORGE CRYLAND'S, Hailstone Wharf, Crescent, Birmingham. Paving executed by experienced workmen. Board of Works and Contractors supplied with Ragstone direct from the quarry.

BATH STONE.—HENRY STONE, having understood that some parties have been offering for sale a sort of stone, calling it Hampton Down, H. S. begs to inform Architects, Builders, and others, that he is the only person that can supply that article. Having, about two years since (at a considerable expense), opened the well-known Hampt n Down Quarries he is happy to state that he can now supply that stone to any extent. Since opening the quarry, H. S has supplied a considerable quantity of it to several churches and other public buildings. COMBE DOWN and BOX GROUND WEATHER STONE on the most reasonable terms. Residence, WIDCOMBE, BATH. Cargoes shipped and delivered to any part round the coast.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office Corsham Wilts

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. Rawlins beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-tricks, grave, and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

BRAMLEY FALL! BRAMLEY FALL! On account of greater facilities than possessed by any one else, TRICKETT and PERKINS are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawksworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of the same quality as the well-known Old Bramley Fall and Horsforth Quarries, but has the advantage of being of a lighter and more uniform colour. The North-Eastern Railway Company have put sidings in on both sides of the railway. Powerful cranes are fixed so that the stone can be got to any size and the stone being loaded in the quarries on the railway-trucks, can be forwarded the same day to any part of the kingdom, or supplied in London river *viâ* Selby or Hull, in any quantity.—For particulars apply to JOHN TRICKETT, Stone Merchant, Headingley, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering backs, plinth templates, sills, corbels, imposts, cornices, copings steps, staircases of all kinds, moulded or plain, square or spandril, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed or stowed, and delivered direct in one bottom by vessel or railway truck.—Prices and every information given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone wharf, Isle of Dogs, or to JOHN TRICKETT, Headingley, Leeds, Yorkshire.

ANCASTER STONE. JOHN WILSON begs to inform Architects, Builders, &c. that having introduced additional and powerful MACHINERY into the ancient Ancaster quarries, he can contract to supply large quantities of STONE, daily the durability of the ancient Ancaster stone (which has been extensively used in the erection of churches, mansions, factories, &c. and has for centuries withstood all atmospheric influences, also the great saving of labour in working, are too well known to need much comment.—Address, Mr. JOHN WILSON, Station-road, Grantham.

PARIS EXHIBITION.—ENAMELLED SLATE—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immaterially below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, lavatories, altar-tablets, pedestals, columns, vases pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

WELSH GRANITE.—The Welsh Granite Company, Carnarvon, supplies Pitching and Paving Sets of this Material to order. The Sets, which have for several years been extensively used in Manchester, Bristol, and other large towns, combine in a higher degree than any others, the qualities of roughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings, and for mill-stones; it will also take a fine polish.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, blue and green, of the usual sizes, which they are prepared to supply on the usual terms, for shipment from their depôt, at Bangor, or to transmit by railway. Also Slabs of all sizes. Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

SLATE CISTERNS, SINKS, and every description of Slate Slab Work, best Bangor Roofing Slates or Covering.—T. B. HANNAFORD'S Priced-list, which can be had on application, will be found lower than any other. Roofs covered with best Bangor Countess slates at a four-mile circle, 21s. per square.—Frevalgn Wharf, Ratcliffe-cross.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1838.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by Steam power, laid down in the best manner or supplied in any quantity. Information for using forwarded with material Post-office orders or reference in London promptly attended to.—Estimates given for every kind of the above work.

ASPHALTE.—THOMAS HARRISON, having completed his works for making by steam-power, is now in a position to execute orders for BLOCK ASPHALTE to any extent, at an hour's notice. Asphalte expressly prepared for barn and granary floors, and every description of agricultural buildings for laying which plain instructions will be forwarded. Estimates given for every variety of Asphalte Pavement, Manure and other Tanks, Sea-Walls, Railway work, &c.—The trade supplied on advantageous terms.—THOMAS HARRISON, Asphalte and Whiting Works, Cambridge-heath Wharf, Hackney; and Sunderland Wharf, Rotherhithe.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH.—Builders having works to execute south west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.
N.B. This wharf is very near the St. Margaret's Estate.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Ordinary and Screened Gravel. For terms, &c. apply at the Wharf
Contractors supplied to any extent.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., YERNERVEL, Isle of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 6d per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster

No. 4. Hire of ditto.

G. ELL, 3, Tottenham-court, and 2, Palace-row, New-road, St. Pancras, near the Hampstead road.

BUILDER'S BUSINESS for DISPOSAL. TO BE DISPOSED OF, by order of the Executors, an old established BUSINESS, with a first-rate connection, situate in a small country town about twenty miles from London. The works executed by the late proprietor have gained for the concern a high reputation, they have included the erection and restoration of several churches and others, both of a substantial and ornamental character. The premises are very complete in their arrangements: the rent nominal, and the stock well selected. The amount required will be from 1,200*l*. to 1,500*l*. There are several advantageous contracts in hand which will be included in the purchase. The business has been conducted by the late proprietor and his ancestors for more than half a century, and to any practical man of business a more favourable opportunity can rarely be met with.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO PLUMBERS, PAINTERS, and GLAZIERS.—TO BE DISPOSED OF, an old-established BUSINESS, in the weald of London, in the above line. This presents a very valuable opportunity to any young man desirous of commencing business.—Particulars may be obtained (confidentially) by principals only, on application to Messrs W. ROBERTSON and CO. Falcon Wharf, Holland-street, Blackfriars

TO PLUMBERS, GAS-FITTERS, and OTHERS.—TO BE DISPOSED OF, the BUSINESS of an HYDRAULIC ENGINEER, established nearly twenty years, in good repute, and with a tolerably extensive connection. The premises are in a first-rate situation at the West end of London, and are well arranged for the business. Coming to about 900*l*.—For further particulars, apply to Messrs FULLER and HORSEY, Billiter-street, City.

The Builder.

VOL. XIV.—No. 703.

BARRACKS, forts, and military hospitals are being built or prepared for in various places and it is of the utmost importance to the country that these works should be executed in the best possible manner,—that the structures may be efficient in the highest degree, combining all the most recent improvements, and at the same time that the public money should not be wasted. The question, therefore, arises, what is the condition of the Royal Engineer Department, to which the direction of these works is entrusted? Our information, so far as it goes, would lead us to give a very unsatisfactory reply. The department consists of two branches, as we have before now pointed out, one military, the other civil. The first consists of about 300 military officers, costing somewhere about 200,000*l.* per annum; and the second, or civil branch, comprises about 127 clerks of the works (as they are called), 154 foremen of works, and a few others, at a cost of about 76,000*l.* per annum.

The duties of the various military and civil members are laid down in a "Code of Regulations," and whilst it is there stated that the military officers should be at the head of affairs, and perform many of those professional duties which usually appertain to a civil engineer and architect, yet it also exacts to a great degree the qualifications of a civil engineer and architect from the clerks of works, and gives the superintendence out of doors to the foremen of works, who are therefore what in civil practice would be called clerks of works. These foremen of works, however, as we are told, are drawn from attending to the duties of superintending outside, and are employed in performing the officers' duties of drawing and estimating and measuring work, so that their more legitimate duties are frequently neglected, while the higher duties exacted from them are imperfectly performed. A jealousy exists beween the two branches, and from the civil half numerous complaints have reached us from time to time, which demand attention. We consider it our duty to bring the objections forward, and if sound it will be the duty of the country to provide a remedy. We speak, then, for the civil branch of the service,—not obstinately, because our information is to a certain extent *ex parte*, but with the belief that what the objectors say has truth in it.

To enable the engineer officer to maintain his position, it is thought necessary to make the public suppose that the designs for all sorts of buildings executed emanate from them. But is this the fact? We believe not. The education at Woolwich does not make the young officer competent for this position; and when he leaves the school, he is at once placed in command of what we are to suppose is a staff of experienced civilians, and gives at times, at any rate, as we happen to know, very nonsensical orders on matters of which he is positively ignorant. He is placed thus in a false position, and, with some few exceptions, remains in it.

This is what sometimes takes place. The inspector-general of fortifications in London is directed to forward designs for extensive works, and some young officers of engineers are employed, at the station where the work is to be carried out, to prepare them, who, after various attempts on the patience of the London authorities, give up the affair. Then a clerk of works, or a foreman, is set to the task, who is hurried to make up for the lost time; and as these civilians know that they are working for the credit of the military officer, and not for their own, they feel no particular interest in the matter; and so things are not so well arranged as they might be. When they have completed the plans and specifications and estimates, they bring them to the military officer, who kindly gives the advantage of his name and rank to crude productions, of which, perhaps, the civilians who drew them are ashamed.

In due course the project is approved, and money granted, on which three or four junior officers, lieutenants of Royal Engineers, and two or three foremen of works, are appointed. The latter act in the capacity of clerks of works, and complaints are made to us that the works are very little advantaged by the military overlookers. Collisions sometimes occur also with the contractor for the works, as the military officers are disposed to consider all civilians, the contractors and mechanics employed by him included, as so many private soldiers placed under their command. The works being finished, the clerk of works, or foreman of works, takes the measurements with the contractor, the military officer signs them on the last page, and then he is said to have projected, superintended, and finally to have measured up all the works; and if they have been executed without any very serious blunders apparent to the public, he is complimented as a most efficient engineer; but if the blunders should be too obvious, the unfortunate foreman of works is dismissed for not controlling his superior military officer, and bringing all due credit to him individually, and to the whole of the corps generally.

Unless we are misinformed, the military engineer officer, as a rule, is not qualified to perform civil engineering duties, or to prepare projects for such works, or even to organise and be at the head of any such works. He has been fortunate in surrounding himself for the last thirty years with professional civilian assistants, under some indifferent and inappropriate title, to keep them from public view, who have performed the greater part of the works of the department, very indifferently in many cases, because working without hope of credit. The clerks of works and foremen who have been many years in the office, have been gradually growing bolder in their demands for proper recognition. This was foreseen some years ago, and many efforts have been made to induce the younger officers to study, and become fit for the position they are supposed to fill, with what success, however, we are afraid to say. The symptoms in Lord Panmure's office seem to show that attention has been awakened there; and it is to be hoped will not be allowed to slumber again before something be done.

The permanent staff of the Royal Engineer department at Aldershott consisted of about thirty members, viz. — Sir Frederick Smith, Commanding Royal Engineer, and six or seven officers of Royal Engineers, eight clerks of works, ten foremen of works, and five clerks. Those who knew the department foresaw the result,—*utter confusion*. We have already told our readers something of the works there.

Agreeably with the "Code," the several clerks of works and foremen of works were told their duties at starting; and after they had been at work for some time, one did not know what the other close at hand was doing, or intended to do: each worked on his own hook, irrespective of the other's proceedings, each being independent of the other, and responsible to the engineer officer alone, who was incapable of guiding and regulating the whole. The consequence was, that one clerk of the works placed his huts where another should have put his; one drained a portion with a 9-inch drain, and then came the next one with a 12-inch drain for the same purpose, not knowing of what had been done in the matter till he accidentally cut through the work.

The financial affairs were in much the same state of chaos, till at length it became necessary to place the engineering matters in other hands. The drainage of the camp was entrusted to a London civil engineer, and Captain Collinson, Royal Engineers, took the place of Sir Frederick Smith. A surveyor was appointed at 500*l.* a year; an architectural clerk of works at 300*l.* per annum; two draughtsmen and a few others. But it must be evident that, unless there is a professional *head*, capable of setting all his staff to work, and knowing what every one is doing, with a view, as the camp is springing up in all directions, to a perfect whole, little improvement can result.

The new temporary professional appointments at Aldershott have given dissatisfaction to the various members of the permanent civil engineer staff, as they consider the failure is owing to the defective and antagonistic system of the department rather than to want of talent or attention on their part; and when the Government saw at length the absolute necessity of making these superior civil appointments, the qualified members of the department think they should have been selected to fill these offices.

We have, then, the singular spectacle of a public department so divided that one half is constantly struggling against the other half; the military branch being constantly obliged to coerce the civil branch into the performance of all the engineering work, in the office as well as outside, whilst the latter as strenuously resists as far as is compatible with the holding of their appointments.

An official committee of four or five members has recently been appointed to sit in London, on the civil branch of the Royal Engineer department: these members consist of one or two gentlemen from the Treasury, two from the Ordnance, and one engineer officer. The object of their deliberations is to get rid of this large permanent civil establishment if possible, or, if not, to re-organize it on some other footing,—a very difficult matter.

It would seem necessary either to leave the Military Engineering department to the military engineer officers, assisted by the Royal Sappers and Miners (which, its enemies say, would bring the department to the ground in a few months), or to create a new *Civil* Engineering department, on a similar plan to that of the Commissariat, Medical, and Ordnance departments. Under such a department, the engineering duties might be carried out in a prompt and satisfactory manner, in a spirit of greater fairness to the contractor and greater economy to the public.

We hear that a London architect has been employed by Lord Panmure to design the new officers' barracks at Dover, at which we cannot but rejoice, remembering some of the crude erections put up by the Royal Engineer department.

We have not by any means exhausted the subject, and shall have occasion very shortly to return to it: all that we can add, however, on the present occasion, is, that there are many most able officers in the department, and that these observations are addressed altogether to the system and the rule, and not to individuals.

THE BRUSSELS CONGRESS.—The Society of Arts' council have requested their chairman, Colonel Sykes, F.R.S. Mr. Thomas Twining, jun. vice-president, and Mr. T. Winkworth, to represent the society at the conferences to be held at Brussels in September next, when questions concerning the manufacturing and commercial relations of countries with each other, and the welfare of the working classes, will be discussed.

NOTES ON SCULPTURE WITH REFERENCE TO THE ROYAL ACADEMY EXHIBITION.

IT may be a question, whether the inhabitants of the little dungeon which is appropriated to the works in sculpture of our annual exhibition, do not afford us a better criterion of our actual position as regards art, both in its production and patronage, than the large rooms above-stairs, whose walls are covered with the works of votaries of the sister art,—painting.

There are many reasons why this should be so. In the first place, sculpture, as an art, has to struggle with more difficulties, and is submitted to more tests than painting, for it is a more expensive profession to the artist, a more tedious medium for the expression of his thoughts, subject to more accidents and injuries by the many operations it has to go through, and the variety of material it has to be worked in through successive changes. The natural result of these severe practical tests, and their consequent expense to the sculptor, is, that he is compelled to bring to bear upon his art a greater amount of thought in conception, greater care in execution, and more dependence on the æsthetic beauty of his composition than need characterize the work of the painter, whose art possesses the varied attractions of harmonizing colours, and the valuable aid of light, shade, and perspective, as well as the beauty of *form* and *subject*, which is the sole language in which the sculptor may express his thoughts.

The tediousness also of the practice and working of sculpture affords time for careful comparisons, and the corrections which must ensue; and these corrections must necessarily be very thoughtfully studied before they are carried into execution; for if not, the result of alteration, when a work is in its most advanced stage, may be fatal to the whole. Even this alone is a refiner's fire. It is not so with painting; for the canvass may be covered and re-covered, parts of a composition be altered, erased, and re-painted with probable advantage, and certainly without injury.

The result is a greater fickleness in painting than is to be observed in sculpture, an absence of gravity and responsibility; for neither of these will be felt where change seems to be necessary, and alterations are incessantly made with so little inconvenience.

Thus we see a greater evenness of excellence in sculpture, a more simple version of nature, a more reverent expression of great truths, a regularity of pulse which will most truly tell us of the health or disease of art amongst us. And this may have been the reason why sculpture should receive the name of the *holy art* in preference to painting; for in its purity and gravity there is a holiness and calmness ever present, whilst lightness, or anything fantastic, seems foreign to its aim and purpose.

It is upon this account that the sculpture which is annually exhibited at Trafalgar-square, deserves especial notice, as affording something more than information concerning the *number* of works executed during the past year, for it is a truthful index to our artistic progression.

In commencing a review, however short, of the more important works, it is impossible not to notice the competition of the two busts of the Queen (1221), by Baron Marochetti, and (1222) by J. Durham. This rivalry places both artists at a disadvantage, for the difference to be observed in the busts, though both something like her Majesty, makes one suspicious that they are neither very good portraits, whilst the calm quiet refinement of Mr. Durham's bust, contrasting with the *pluck* of Baron Marochetti's, changes the latter into impertinence, and reduces itself to something like tameness. 1224, by MacDowell, called "The First Thorn in Life," is a group of two children, happily arranged, both children exceedingly beautiful, but it is impossible to help wishing the artist was engaged on a subject better worthy of his chisel; something which, with a larger amount of mind in it, would give increased value to the marked beauty of workmanship to be observed in this group. 1232*, by Calder Marshall, called "Imogene asleep," is a reclining figure, full of poetic grace and purity. 1228, by E. G. Papworth, statue of a "Nymph Surprised;" 1229, "Venus and Cupid," by B. E. Spence; and 1234, "Group of Euphrosyne and Cupid," by E. B. Stephens, are all examples of that school of sculpture called the Classical. They are all instances of fine modelling, if we except the lower limbs of the last, totally missing the main purpose; at least so far as the purpose of sculpture consists in interesting the spectator, elevating his taste, and either inculcating love for some beautiful affection, or high and noble principle.

Our sculptors of the present day are certainly not happy in their selection of subjects. It is painful to observe the proportion of large figures, in the exhibition, which endeavour to illustrate a bygone creed and theology that men of the present day can never understand or thoroughly appreciate, for the simple reason that they are not believers in it.

(1242) "Resignation," by Baily, R.A. has all the characteristics and peculiarity of treatment that mark this artist's works, but will not increase his reputation.

(1255) "Maidenhood," by J. Hancock,—

> "Bear a lily in thy hand:
> Gates of brass cannot withstand
> One touch of that magic wand."

Concerning this and another of Mr. Hancock's works, both of which were in the Paris Exhibition, a celebrated French critic wrote, that "the 'Maidenhood' and the 'Beatrice' of Mr. Hancock, *possess* what Gibson's works *require*, viz. life," and if we examine minutely the expression of the face, the disposition of the drapery, and the modelling of the extremities,—the pure feeling displayed in the *posé* and general effect of this figure, comparing it with the numerous examples of the Gibsonian school which surround it, we shall be inclined to give full consent to the French verdict. It is an example of what may be done by an Englishman who has thrown overboard all servile imitations of the antique, and, acting solely on his own responsibility, produces a work of art of no school but that of nature. Note the delicate modelling of the face, hands, and feet, and it will be a lesson how perfection of detail may be made to enhance the general effect, and then compare this draped simple figure with the naked nymphs and Venuses and fat Cupids which abound on every side of it, and say which is most worthy of a Christian artist in a Christian country. 1253 and 1259 are models of colossal statues of War and Peace for the Guildhall monument to the Duke of Wellington, by John Bell. The former of these has been censured as too direct an appropriation of Michelangelo, and the latter seems to have escaped attention. Still, regarded as conventional treatments of the human figure for the subordinate parts of a monument, they have claims to attention. 1271, "Statuette of Robin Hood," by Miss Durrant, is a work which in many ways is excellent. The *posé* of the figure, and drawing of the parts, show an intimate knowledge of the human figure, whilst the workmanship displayed in its execution is of the very highest order. 1247, "The Milton Vase," by W. and T. Wills, is a work which should have interested architects, as an architectural feature worked out in a manner very much above the ordinary standard of such works. It is probably intended that the vase shall be executed in terra cotta. There is at present a great want of such ornaments for terraces and conservatories; and it is gratifying to see that this want has been felt by men holding the position of artists.

Thus having glanced at some of the more important works, it will be well, perhaps, to sum up these notes in a few remarks on the exhibition as a whole.

The real is certainly well represented in it; the ideal but very imperfectly. The wind blows still too much in the direction of Greece and Rome. A work in sculpture should either be simply a copy of Nature in her most perfect form, arranged in such a way as to exhibit the peculiar beauties of the subject in the most prominent manner, or it should take its stand on higher ground, and by selecting some natural incident, tell a tale instinctively known to every human being, appealing to our affections, and teaching us the greatness and the beauty of Nature's eternal truths.

The first of these would be *language*, the second, *expression*. The former is the A B C of the latter. Yet how few are those who know their alphabet, who ever learn to read. Of the first kind is the Venus de Medicis, which is simply the most beautiful form, exhibited in the most sensual manner, meaning nothing beyond its luxurious trick of attitude, and depending solely on its truth of imitation. This is language. But the man who did that work understood sculpture. He regarded it as it should be regarded, for though painting may be the thing of a country, sculpture is a thing of the universe. The Venus yet speaks, but in a language which only tickles the senses and pleases all, without improving them. Of the second class of subject, involving expression, we have but few examples, either in antique or modern sculpture. We look for it almost in vain in the present exhibition; and yet the reason of its absence is certainly not to be attributed to want of power. That our sculptors have; and let us hope that in future exhibitions they may apply it in a better way than they have in this.

WALTER SMITH.

THE CLOSED GRAVEYARDS.

DESTRUCTION OF MEMORIALS.

IT is satisfactory to find, on looking into some of the closed London graveyards, that pains have been taken to trim the grass and trees, and to plant flowers. In some instances the stones and other monuments seem to be allowed to remain in their original positions, and to be to a certain extent cared for. In other cases, however, the stones have been taken from their places and laid flat in regular order over the graveyards; and in others, the stones have been taken carelessly up and packed together in a corner. This is not right, for the ground marked by these memorials has been in every case handsomely paid for. Many of these stones cover the remains of well-known persons, and even those placed to the memory of people of less note have a value in the eyes of the families to whom they belonged. It should be remembered, too, that on many occasions the London tombstones have been found useful in settling disputed claims to property, and in clearing up doubtful points of genealogy.

In looking at the various monuments which crowd the metropolitan burial-grounds, it is painful to notice the rapid decay of the more perishable sorts of stone which have been selected for this purpose. On some tombs, not a century old, the lettering and sculpture are invisible: on others, of harder material, the lettering is as sharp as if only recently cut: those stones approaching to the nature of slate seem, in the open air, to be more durable than marble. A useful lesson may be gained by a visit to these receptacles of the dead, where the progressive decay of various kinds of stone is often marked with exact dates.

Many interesting monuments are in a deplorable state, and require the revival of the functions of "Old Mortality" to save them from destruction. We have already alluded to the tomb of Daniel De Foe, and could give a multitude of examples somewhat similar, but will for the present content ourselves with referring to the monument of Girtin, one of the first of our water-colour painters, the friend and fellow student of Turner. This artist, whose name will live in the history of English art, was buried in the churchyard of St. Paul's, Covent-garden, and his grave was marked, as the sexton states, by a stone, on which were some carved ornaments and an inscription: the ornamental part has been some time gone, but our informant believed that the lettering might still be made out. In this place the stones are all laid flat, but we tried in vain to find the name of Girtin upon one of them.

The cost of recutting and doing up a gravestone is but trifling, and in some cases—that, for example, of Joe Miller, in Portugal-street—the officers of the parish, much to their credit, revived the stone.

The gravestone of Woollett would by this time have been illegible, but that a few artists living in the neighbourhood clubbed together,

STOWING AWAY THE GRAVESTONES.

and had the stone repaired. We mention these instances, hoping that it may be the means of inducing the churchwardens and others of the metropolitan parishes, who have had their grounds put into order, to make a careful inspection, and discover those of note buried in each, and, where necessary, set about restoration. Something should also be done by those engaged in art, literature, &c. in preserving the memory of men who have been eminent in their respective departments. Those connected with the London stage ought not to lose sight of the gravestone of Joey Grimaldi; neither should the artist fail to preserve what marks the resting-place of Girtin, or the *literari* allow the tomb of Daniel De Foe—that admirable writer and patriotic citizen—to remain in its present condition.

After searching for the grave of Girtin, and looking into the church, we found, in the south wall, a small square marble tablet, without the least attempt at ornament, thrown out by a border of black paint, on which is the following inscription, in plain Roman letters:—"In the vault beneath and near this place are deposited the remains of William Turner, of this parish, who died September 21st, 1830. To his memory and his wife, Mary Anne, their son, J. M. W. Turner, R.A. has placed this tablet. August, 1833."

It may be mentioned, that our great landscape painter intended for many years to put up a monument in this church to the memory of his friend Girtin, and more than once had estimates given for the cost of such a work, but was not willing to go to the expense proposed,—a thing to be regretted, for a monument placed by Turner to the memory of Girtin would have been a relic of great interest.

Immediately adjoining the tablet to Turner's father is one placed by the friends of the veteran actor, Macklin, and which is much more decorated than that to the painter's father, on which is this inscription:—"Sacred to the memory of Charles Macklin, comedian (with the aid of public patronage), by his affectionate widow, Elizabeth Macklin. Obiit, July, 1797; Ætatis 107."

There is scarcely a London church or graveyard without memorials which, if kept, will have value in future years.

The monuments in these spots also show a phase in the progress of art. There are few stones out of doors in London dating back 200 years which can be deciphered; and yet on them may be traced elaborately wrought headings, similar to those to be met with in various parts of England and in Scotland. We have frequently in Scotland met with carved stones in deserted churchyards, of about the date of Charles the First and Second's time, which have been very boldly designed and artistically cut: some of the devices have been elaborate, and represent the resurrection, emblems of mortality, &c. In the graveyards of St. George the Martyr and St. George's, Bloomsbury,—two immense burial places which stretch from the neighbourhood of Hunter-street, Brunswick-square, in the direction of Gray's-inn-lane, now both closed, the grass and weeds in many parts were nearly 2 feet high. We noticed here amongst other large monuments an obelisk on an ornamental base, more than 20 feet high, surmounted by a vase. "They came to look at this, sir," said the man, "but were too late, the lettering is gone, and all that the parties could collect as regards this ambitious tomb, were traces of the armorial bearings of him who here rests." *Vanitas, vanitatis.* There were a few graves amid the general wilderness which showed marks of care—chiefly little graves, on which were planted rose-trees, lilies, and other suitable plants. One large grave was a complete garden. A very old, grey-headed man comes from a distant part of the country to visit this grave (that of his wife). He has been in the habit of doing so for many years. These burial-grounds are very picturesque: the trees are well grown, and compose nicely with the monuments, and with very little trouble these places might be made into beautiful gardens, where many living in the neighbourhood would be glad to while away an hour. At present they are deserted and neglected spots.

The other day we were in the neighbourhood of Golden-lane, St. Luke's, a district swarming with a poor struggling population. From Golden-lane numerous narrow courts, some of them of great length, run in various directions, each containing from a dozen to fifteen houses: few of these have any back yards or water-tanks: in consequence, the people depend for their water supply from a leaden pipe fixed in the court. In one of these courts there are thirteen houses, with only a half-inch pipe to supply the whole. The water comes in for about half an hour, and sometimes less, the people complain sadly of this: they cannot get sufficient in the time, and all manner of fighting and quarrelling takes place. Golden-lane is a picturesque-street, some of the houses are 300 years old at the least. There is a goodly array of barbers' poles, the black dolls of the rag-merchants, the projecting signs of the patten-makers and peg-top turners: there are also the representations of the Lombards, the publicans, and the coffin-makers, to be found in considerable numbers in this region. Playhouse-yard, and one or two other places in this locality, have interesting associations. It is gratifying to find a marked improvement here, in the manner in which the scavenger carries forward his work. The matter, however, to which we wish more particularly to direct attention, is a large burial-ground, called, the "City Bunhill-fields," or "New Bunhill-fields" Burial Ground. This ground, which is of considerable size, has been closed by order of the Government, the soil having been well packed with dead. The ground is entered by a large archway, above which was the name of the burial-ground, painted in large letters. This has been whitewashed out, and a notice stuck up that there are dry vaults "to be let below the chapel." The chapel is a large building placed in the centre of the ground: there is now not a grave to be seen, the whole having been brought to a sort of level. The experienced eye, however, detects certain raised portions, which show the great number of the tenants of these tracts. In the unwholesome looking soil, varied with a stunted sort of herbage, or fern bushes, blackened with the London smoke, and sickly looking,—an ancient horse, with his back turned to the wind, and a few black London sparrows, are the only living things visible. It is a dreary-looking scene. On finding the woman who is placed in charge of the place, we inquired what had been done with the gravestones? "What stone did you want, sir?" And on expressing a wish to see the whole of the stones which had formerly marked so many graves, we were directed to a corner of the ground, where the monuments taken from their original and rightful place were packed up against the wall, as in our sketch. Here, it is probable, they will be for a time allowed to remain, and then be still further dealt with.

Some of these stones have on them the date 1846, and others are even more recent. It is a breach of trust to remove these memorials from their proper places, and to level in such an indiscriminate manner, and with such indecent haste, so many graves.

One would almost think that it would be unnecessary to give a caution as to the danger of building on such places, but is has been done, and probably will be again attempted.

THE ARCHITECTURAL ASSOCIATION.

As a member of the Architectural Association, but unable to attend the meeting of the 27th, I have read with much interest your report, and especially the letter received from the Council of the Royal Institute of British Architects, which I think must, from its honourable and straightforward manner, bring the matter to a satisfactory conclusion, if an equally plain common-sense method is adopted by both parties in producing the result. As, of course, nothing can be done on the Association's side till next session, I think it might be of some use to state in your columns some of the difficulties to be got over so as to get opinions as to how the same might be best met eventually, and turned if possible to the advantage of both sides. I will, therefore, enumerate some

facts which belong to each, and which must, without destroying them, be made if possible to harmonize.

On the side of the Royal Institute of British Architects.

1. The charter of the Royal Institute of British Architects cannot be altered unless by Act of Parliament. [It must be by obtaining a fresh charter.]

2. The subscriptions are, for members, 4*l.* 4s.; associates, 2*l.* 2s; students, 10s.

3. There are certain persons who from sundry causes are ineligible.

On the side of the Architectural Association.

1. Any one may be admitted on being proposed, seconded, and balloted for according to rule.

2. The payment is 10s.

These are the true difficulties: any union can only be by reconciling these. Now, to do this, all that appears necessary is to incorporate the two, retaining in working the separate action of each. Say that the Royal Institute of British Architects passes a resolution admitting the Architectural Association in a body as students (they thereupon dropping the name of Architectural Association), and merge their own students in them, leaving to this body itself the right of electing students ever after, while they themselves reserve the same right as the Royal Academy has in regard to its students,—that of erasing from the students' list any student who shall do a disgraceful action. Then let these students (having the right of attending the Institute meetings) be permitted to meet on the alternate Monday with the Institute to read and discuss papers of their own. While the Class of Design, under its present rules, having swept up in its more energetic government the Royal Institute of British Architects' students' class, would meet, it might be as usual every alternate Friday. Under this system, the vice president of the students might be always elected along with the other members of the Royal Institute of British Architects, the members, &c. of that body voting for this election. The junior members would have full use of the Institute library, and also the publication of their own papers, and the use of its rooms, and the Royal Institute of British Architects would sweep up in this class all the general public who take an interest in its meetings and the success of architectural art,—a thing they have not yet, it is allowed, succeeded in; and that most vital principle, which has and ever will keep something of this sort afloat,—the subscription,—will be that amount which it is found is the most that can reasonably be paid by junior members. While they would thus be able to still blow off that most useful but somewhat superfluous steam through the safety-valve of their Monday, un-overawed by the elder Mammoth engines; while the older members of the profession would still exercise that influence which it is most desirable they should have over the real course of events, and which is impossible in the present alienated state of the two societies. As to the "antagonistic spirit displayed," it is well known in the Architectural Association that it has almost invariably been by men who were associates of the Royal Institute of British Architects, and generally found its strongest opposers in those who did not belong to or were even excluded by its rules from its halls. It is well to remember that some of the most distinguished members of the Architectural Association were men who were not architects at all, as Mr. Braithwaite, and that able member, Mr. Burt, whom Providence was pleased to remove.

J. T. IRVINE.

I am reminded by a letter from the secretary of the Association, that attention has not yet been fully directed to the letter which has been lately received from the secretaries of the Royal Institute of British Architects, and to the real merits of the proposal; and, in order that the matter should be carefully considered during the recess, I would call the attention of the members of both societies to some of the salient points in the discussion.

The notice afforded by the Institute certainly places the Association in a rather new position. It implies respect on the part of the former, and, as members of an honourable profession (I write as a member of the Association), we must at least show that in that respect we are their equals.

I can appreciate the pleasure and the pain with which the council profess to regard the proceedings of the Association, for I have myself felt them on more than one occasion. Therefore our reply ought not to slur over anything that the Architectural Association has done amiss, for we desire improvement; nor should our reply take too high a ground, for those whom we are addressing (I assume that we address the council) are our superiors in professional position, our seniors in the practice of the art. On the other hand, we have a position acknowledged by the Royal Institute of British Architects, of which we must not lose sight. The whole tenor of the letter we have received is an admission of *our* greater freedom of action than is compatible with *their* foundation.

When reference is made in our reply to the apparently "antagonistic feeling" shown by the Architectural Association to the Royal Institute of British Architects, it should be pointed out that this arises in a great measure from the diversity of object in the two societies, the necessary contrast between the aspiration of the younger members and the satisfaction of the older practitioners.

The desire expressed, that the exercises of the Institute should become more serious and extensively attended, should be echoed, and the want of any "*direction*" (see our former memorial) pointed out as a great cause of the present defect.

As regards "co-operation" or "fusion," the two are incompatible. Co-operation requires a separate basis: fusion implies incorporation, unity of government. The intention of the Institute is to give the established architect a name for recognition. The intention of the Association is to lend a helping-hand to all who are desirous of advance. So far the societies contrast: both, however, seek the advance of the science, and the increase of knowledge and information on subjects cognate with our art.

The practicability of any connection, so far as the Architectural Association can consider it, must depend upon the public expression on the part of the Royal Institute of British Architects, of their real intention to cultivate affinity with the student.

The object that draws most of us to the meetings of the Architectural Association is the reading and free discussion of papers, the meeting with friends, and the study of design, by comparing the ideas of others with our own. These are almost the only means the Architectural Association has been able to take to further the study of Architecture.

The Royal Institute of British Architects is an institution formed for the "general advancement of civil architecture and for promoting and facilitating the acquirement of the knowledge of the various arts and sciences connected therewith." The organization, as settled by the charter and bye-laws, forms a means for giving expression to the wishes of those devoted to the profession and for the acquirement of knowledge on cognate subjects. Their library is most valuable alike to the practitioner and to the student. Their opportunities of acquiring information from all quarters are most extensive. Everything, from their position and prospects, is most advantageous. The means at command, either functional or acquisitional, are not, however, as the Royal Institute of British Architects is at present constituted or carried on (I know not which) used to such an extent, nor is the earnest intention of advancing the art exhibited, as such a profession ought to be: such I believe to be the prevalent impression.

I do not know anything to be fairly subject of complaint in the bye-laws, the terms of membership, the several declarations or the subscriptions, the expenditure of the finances or the courteous behaviour of the secretaries and other officers; yet, with all this, I am satisfied that there is such a pressure of authority at all the meetings, something of so overbearing a character in the occasional inanities of the speakers, and such a want of any vigorous executive to put down that which does not "promote" or "facilitate" "the acquirement of knowledge" at the meetings of the Institute, that I should myself regret if it could be stated that this was all the opportunity accorded to the architectural student of London for the acquisition of information or the exercise of his communicative powers.

On the other hand, I should myself greatly prefer, instead of the meetings at Lyon's-inn Hall, meetings of young architects in the library or theatre of the Institute; and if the associates would, as a body, meet together at times distinct from those of the ordinary general meetings, I am confident great benefit would result. Such meetings might be held either for the study of design or for the discussion of papers, and the use of the library and casts belonging to the Institute would be of the utmost value.

I am not acquainted with the history of the two societies now amalgamated in the Institute: I should judge, however, from the "unity of action" of the combined mass, and the fact that its rate of motion is so small, that there must have been something antagonistic in the direction of the original bodies.

If it be possible for the members of the Association, as such, to meet at the rooms of the Institute, I can conceive great advantage to arise to the students. I suspect, from the feeling exhibited at the last special meeting, that the Institute is not disposed to take any more public position than it can avoid, but the "pledge of co-operation" now given is such as the Architectural Association cannot, without great discredit, avoid accepting to the utmost extent to which such co-operation is available. The purposes of the Royal Institute of British Architects and the Architectural Association are to a great extent the same. The Association expresses a somewhat warmer temperament than the Institute.

If the students' list at the Institute were open to all respectable students of architecture, without respect to age above fifteen, and at a subscription of the same amount as that of the Association, entitling to the use of the library and attendance at the meetings, then the objections to joining the two societies must be reduced to very few. The students might have their own meetings, at which associates should be permitted to take part, and so far as the present uses of the Architectural Association are concerned, such a class would better effect them.

The Architectural Association has, in its time, done much to assist the formation of the Architectural Exhibition. It has discussed and brought forward the competition question, but with little effect. It has recently memorialized the Royal Institute of British Architects for an examination. In these public matters it has been of service. As regards the last of these, a class of students of the Institute meeting as I have suggested, would have been equally effective. But as regards the other matters, as regards introducing before the architectural public questions of importance affecting the profession, some mode of giving expression to the opinions of the younger members is required. That class, represented by the associates of the Institute, ought to be heard, not only as an appendage to a body of advanced practitioners, but as the really thinking portion of the profession, those most vitally interested in obtaining that fair play which the exercise of our calling requires.

If the council of the Institute can overcome this difficulty, the task of union will not be of much difficulty; but when we consider the want of energy on the part of the Institute of late years, we can hardly wonder that many members of the Association are desirous that at least for this last-mentioned purpose there should remain a distinct body in the profession,—a society not tied in any way to another, more weighty and authoritative than itself, but one, situated in the metropolis, that can take up questions of a public nature, and can give public expression to its opinion; even though, while expressing the views of the younger members, they may be acting in opposition to the voice of the elder body.

THOS. M. RICKMAN, A.I.B.A.

PROVINCIAL NEWS.

Grimsby.—The dock company here have commenced excavating for the foundation of sixteen new offices, near the entrance of the new dock works. The Anglo-French Company will require large accommodation.——The surveyor to the local board, Mr. Micklethwaite, has resigned, having obtained an appointment under Mr H. Fowler, C.E. who is about to proceed to Algeria with a staff of English and French surveyors, to lay down lines of railway, by order of the French Government.

Norwich.—At a meeting of the town council a few days since, Mr. Gorell, adverting to the new free library, asked if there was any truth in the report that some beams had given way in the building? The City Surveyor replied, that an iron girder had given way from a flaw in the iron. It had been repaired, and was now put up again. Mr. Kerrison said, as the School of Design was to be held in the new building, and as probably 700 or 800 persons would have to go into it, he should like to have the building properly tested first. The weight of 700 or 800 persons would be 50 or 60 tons, and he thought some test should be applied. The City Surveyor said, the weight would not be all concentrated in one spot or room. Mr. Kerrison, admitting that, observed that before the Foundry-bridge was thrown open, it was tested by 40 tons being put upon it. The City Surveyor said, the girder which had proved defective had been tested with a weight of 40 tons. The girder had been repaired and extra trussed. It had before given way from a flaw in the iron, and not from any defect in the construction. Mr. Darkins said, he had some little to do with the Foundry-bridge, and he remembered, when it was first put across the stream, it was filled with Scotch bullocks. Mr. Bidwell, amid considerable laughter, asked whether a lot could not be got into the library building.

Lowestoft.—The continuation of the Esplanade to the extreme of the Wellington-terrace, is about completed. It will provide from the Royal Hotel an unbroken marine drive of upwards of three-quarters of a mile in length. A promenade has also been constructed quite

through Pakefield, with seats for pedestrians. The Wellington-terrace is drawing towards completion, and the grounds in front are being laid out. The band of the Norfolk artillery has been engaged to perform on the South pier every day, Sunday excepted.

Eye.—The corporation of this borough has resolved to take down the old Town-hall, and erect a new one, to correspond with the new Corn-exchange. Plans by Mr. Lamb, of London, architect, have been approved of. The estimates are about 1,500*l.* It will contain two reading-rooms, &c. on the ground floor: the magistrates' room will be upstairs, and there will be an approach through the principal entrance to the tower, with other conveniences. The Corn-exchange will be 74 feet in length, and 27 feet wide, with wood floor in diagonal patterns. The height of the tower, including the spire, will be 74 feet. The tower, when built, will contain the clock, which will show three or four dials, if required. The corner house in Broad-street, near the theatre, is in part taken down and a new house building, which will contain a magistrates' room, for the Hartismere Hundred, and two lock-ups, with residence for two policemen. These buildings are erected by Mr. E. Chenery, and let to the county of Suffolk, at an annual rent. The plans were furnished by Mr. Farrow, of Diss, architect.

Lynn.—The public baths were opened last week. There are eight slipper baths, two shower baths, one large swimming bath, and a superintendent's house. The cost, including extras, fittings, and the architect's fees, will be under 1,300*l.* The swimming bath and one-half of the slipper baths, are supplied with sea water.

Brighton.—A vestry meeting was held last week, to consider a report of a committee of directors and guardians, adopted by the latter, recommending that the present workhouse be altered according to plans prepared by the parish surveyor, at an estimated cost of 803*l.* and that new Industrial Schools, on plans also prepared by the surveyor, and approved by the Poor-law Board, should be erected, at an estimated cost of 7,899*l.* on a plot of land belonging to the guardians, lying between the reservoir and the Race-hill. After considerable discussion, the meeting was adjourned for a fortnight.

Leominster.—Shobdon Court, situated about eight miles from the town of Leominster, the seat of the Right Hon. Lord Bateman, is undergoing extensive alterations and improvements, under the direction of Mr. Alexander Milne, of Northampton. The works proposed are,—to renew entirely the whole of the windows with oak sashes and frames, and plate glass; new principal staircase of wainscot oak, and the interior fittings of the building to be reconstructed. A new terrace and orangery are to be added, the whole length of the south front. A contract has been completed with Messrs. Ruddle, of Peterborough, for 12,250*l.* for the execution of these works, which are expected to occupy about eighteen months in completion.

Liverpool.—The new landing-stage contractors. Messrs. Vernon and Son, are now proceeding with the work. Fifty-two of the sixty-one large air-tight floating tanks, or pontoons, on which the superstructure is to be supported, are placed in position. The kelsons, or retaining girders, are fixed over the fifty-two tanks, which are now ranged in position. The main timbers, or chief framing, are fitted, and placed over fifteen of the floating tanks, and a large additional portion of the main timber-work is in advanced progress. In accordance with the terms of the contract, according to the *Journal*, the new landing-stage is to be placed, and ready for use, at the Prince's Pier, in March next.

Preston.—On Monday before last, Mr. Ranger, superintending inspector of the General Board of Health, visited Preston to inspect the works in progress in connection with the supply of water to the town. The Local Board wanted the sanction of the General Board to borrowing more money to carry on the scheme. A sum of 40,000*l.* (sanctioned) has already been expended, together with an additional sum of 15,000*l.* making in all 55,000*l.* The General Board's consent is wanted for the 15,000*l.* and for a further sum of 25,000*l.* Mr. Ranger, accompanied by the town clerk and the engineer, went over the works. He visited the office of the Local Board with a view to ascertain the exact cost of the works now completed; but we understand, says the local *Guardian*, that he found the books in such a state that he could not obtain this information, and until a satisfactory account is rendered of the expenditure, he will not certify even as to the 15,000*l.* already spent. As regards a farther sum for works yet to be undertaken, it is added he required to see the working plans, sections, estimates, and probable cost, but was unable to obtain the necessary information, neither plans nor estimates being ready.

ON ORNAMENTAL LEADWORK.

At the present time, perhaps there is no metal considered less suited to the purposes of the fine arts than the subject of the present notice. However, the great artists of the Middle Ages thought very differently; then architecture was (and it always must be) eminently an architecture of figures and subjects, and accordingly they compelled even lead to bear its part in the great poem of Christian art. They cast it into ornaments, they hammered it into figures, and with the help of tin they executed imperishable paintings, which, when placed beyond the reach of man, have far more successfully resisted the ravages of time, than the crumbling sculpture or the worm-eaten dossel.

At the same time it must be confessed, that the intrinsic value of the material has but too often been the cause of its destruction; and although as citizens we can scarcely blame the French Government for melting even the historiated lead into bullets for the defence of the country, yet as artists we must ever deplore a necessity which has left us vestiges so few, that our curiosity is rather stimulated than gratified. I can only, therefore, pretend to give a very short notice of the various objects which our forefathers produced in tin and lead, beginning with those belonging to the church—the great art patroness of the Middle Ages.

ROOFS.

Let us imagine the architect has got up the carpentry of his roof, and then proceed to ascertain how he went to work to cover it: and here it may be premised, that his roof is a very different one to those designed by the ingenious Mr. Peter Nicholson; however, the only points of difference with which we have to do at present are, first, that there is no ridge-board, the rafters meeting one another at top, while they were kept in a straight line by means of a ridge-beam below. The second point of difference is, that the king-posts stand up above the roof for a considerable distance. In the thirteenth, and early part of fourteenth century, however, when continuous ridges were used, composed of isolated members, as at Amiens or Exeter, the ends of all the king-posts, except that over the apse, were cut off, as they would not be wanted for the support of the ridge.

Now the architect in those days, as in these, had the choice of tiles, slates, or lead, to cover his roofs with; but then, as now, the latter material was by far the more costly and the more esteemed. Still, even tiles and slates, under his hands, became beautiful: the tiles were covered with variously-coloured enamels, as at Mantes, while the slates had their edges cut into divers shapes, and were disposed in patterns according to their tints.

When lead was used it was generally very thick: that at Canterbury, I am told by Mr. Austin, runs about 12 lbs to the foot. The roof being boarded, it was laid on, much the same as at the present day, except that the sheets were somewhat narrower (about 2 feet between the rolls), and that these latter were formed by turning over the sides of the sheets of lead without the assistance of the wooden rolls used by the modern plumber. If there was no ridge the rolls were continued over the top of the roof, and a little way down the opposite side, so as to allow the sheets to hang well on. If, however, there was a ridge, the method was rather different; and here it may be observed, that during the Middle Ages everything susceptible of having a ridge applied to it had one; this was the case even with the miniature enamelled "Bahuts de Limoges," and still more so with regard to the large silver chasses for reliques, some of the crestings of which were most beautiful, though of course treated according to the different material employed. The tile roofs had the crestings, several of which have been discovered at Great Malvern;* but the slate roofs were treated in a similar manner as the lead ones, to which we now return. We have supposed the roof to have been boarded, and covered with lead, with the rolls continued over the apex. Now, as these rolls would interfere with the ridge, they must be suppressed, and accordingly the sheets of lead are made to finish at some little distance (one foot or more) from the top of the roof, where they are turned in and nailed to the underside of boarding. The apex was not generally covered by two boards butting up against each other: it was, on the contrary, thought better to cut a sort of trought out of the solid, and apply it reversed to the top of the ratters, so as to form as solid a foundation for the ridge as possible. Irons in the form of an inverted Y were nailed on this inverted trought at proper intervals, and then the piece of lead forming the ridge-piece having had corresponding holes cut in the middle was slipped over them. The next thing was to cast the various members of the cresting, to solder them together (for they could only be cast in halves), to slip them over the projecting irons, and, lastly, to solder their lower extremities to the leaden ridge-piece. Where nails were used, the heads were covered with a square piece of lead, soldered at one end, and as this solder extends some way down, and is marked with the iron at a little distance, the whole looks like a coat of arms with a chef. Fig. 1 is from Amiens, and affords an excellent example of the very simplest form of ridge; unfortunately, there is nothing to tell the date by, as the sides of the fleur-de-lys have been removed on one of those occasions when the French nation, wearied with kings, expelled the dynasty and defaced its badges. Most probably, it is a sixteenth-century restoration of the thirteenth-century ridge, for the spire was burnt down, and with it part of the roof, in 1527, and when these were restored a few years after, a very different form of ridge was in vogue.†

The next modification of these simple forms is to be seen at Nayen (Fig. 2), where a cusping is attached to the bottom of the trefoil, or fleur-de-lys; this cusping being supported on two sides, would have strength enough to keep straight, and not to sag by its own weight. This example is about the middle of the fourteenth century.

I must now go for authorities to the work of M. de la Querrière, who has given several specimens of ridges, but unfortunately has said nothing of their construction. They are all constructed upon the same principle, and we now see why the king-posts are carried up, for to them is nailed at some distance above the apex of roof, a bar of iron, covered loosely with lead. The ridge, which is always of an open and delicate pattern, is cast in two halves, as usual (except when it is very light and open), is then soldered at bottom to the ridge piece, and at the top to the lead pipe covering iron bar (see Fig. 3, from an ancient drawing, published in De la Querrière's work). Occasionally as in the Hotel de Bourgtheroulde, at Rouen, the cresting is divided into two parts, one of which is fixed above, and the other below, the iron bar. In this case the upper portion is always the lightest, but still should always be kept very subordinate, as on account of having nothing to support it, it is liable to sag. De la Querrière tells us that, in this instance, it has disappeared.

Where slates were used, another decoration to the ridge-piece was the application of long pointed strips of lead, alternately pointed and curved; these were cast, and soldered on to its

* "Journal of Archæological Institute," and Parker's "Glossary."

† At Rheims, the principal member of the cresting was 2 feet high and 1 foot 6 inches wide (French measure); that at Exeter is about 1 foot high by 10 inches wide. I am afraid that even the oldest part of the Exeter ridge must be considered as a sixteenth-century restoration of an earlier one. Mr. Cornish, who conducts the works of this cathedral, has presented one of them to th Architectural Museum, where it can be seen.

lower extremity; they occur at the Chateau Meillant (Seine Inférieure), at the house of Jacques Cœur, and at the Hotel Cujas, Bourges.

GIROUETTES.

One of the objects of permitting the king-posts of roofs, as well as the centre posts of spires and dormer windows, to project beyond the top of the roof, was to get something on which to fasten the girouette, epi, finial, or weathercock. These girouettes must have been one of the principal features in a mediæval town. Every house had one, if not several, and although there were laws occasionally passed, restricting particular forms of vanes to the nobility, there were none that I know of to prevent the bourgeoisie having theirs in the shape of animals, birds, &c. We may gain some idea of what the general effect of an assemblage of these vanes must have been from the illumination of Troy Town, published in Mr. Shaw's "Dresses and Decorations of the Middle Ages," vol. ii.

Girouettes, although remaining in far greater numbers than ridges, are, if anything, even more difficult to get at for the purposes of study, inasmuch as they are placed on the most elevated parts of the edifice, and nobody ever cares to take them down until the building itself is destroyed. However, I have been fortunate enough to meet with one in the possession of M. Benvignac, of Lille, who kindly afforded me every facility for examining and drawing it (fig. 4). The construction is as follows:—An iron rod, the length of the proposed girouette, is split at the end into four feet, which are made rather long and broad, so as to fix it securely on to the king post. This part is secured from the weather by a square hollow pyramidal covering of lead, resting on the rafters and ridge of the roof. The rest of the rod is covered by a lead pipe, to which are attached various ornaments. This principle applies to the construction of all girouettes, the only difference consisting in the ornaments, which in the larger ones will be found to be larger and more complicated. The lead pipe in these latter is made in several pieces, and each part of it is made to support itself upon the one below, which generally terminates with a flattened sphere, or some other ornament, adapted to the purpose. The upper piece of all, which rested on the top of the iron rod, had the plate of copper forming the vane soldered on to it; and Mr. Potter, of South Molton-street, informs me that in the ancient work these upper pipes had a piece of agate inside, so that there might be less friction on the top of the iron rod, but in the present day gun metal is used instead. The vane itself was painted with the arms of the proprietor, or else gilt.

It is a curious thing that Chaucer, as well as several other authors, mention the harmony made by the vanes as something to be admired.* Whether this is simply an exaggerated poetical expression for the creaking noise a number of vanes would collectively make; or whether each vane turned some mechanism concealed in the lead ornament below; or whether the vane being double, the wind, by blowing in between, produced a noise like that of an æolian harp; it is almost impossible at this time to decide.

The hospital at Beaune, in Burgundy, is the only building I am acquainted with, which has preserved the whole of its girouettes, and which can give us an idea of the effect produced by a number of these decorations; but inasmuch as they have all been restored and repaired, I can hardly consider them as quite safe guides with regard to the lead ornaments, although these latter, themselves, are pretty authentic, as several of the ancient chalk moulds are preserved and have been made to do duty again.

The general arrangement of the ornaments appears to have been this: the square pyramidal base was decorated at the sides with crockets; those in the Tournay specimen† are flat, cast in lengths of three, and then soldered on to the edges. In larger examples than this, the crockets resemble those placed in the upper part of the girouette, and described hereafter. A gilded sun, very thin and very open, was often fixed to the front of the base.

* For quotations, see "Hunt's Tudor Architecture."

† The girouette, in the possession of M. Benvigne, of Lille, came originally from Tournay.

The space between the base and the weather-cock is for the most part occupied by three tiers of ornaments: the lower consists of a flattened sphere from which project sundry squares or cylindrical short pipes, ending in stars, or quatrefoils, or masks, but more generally in a lozenge-shaped ornament, surmounted by a pediment (fig. 5); the several parts are all cast separately, and then soldered together. When this lower ornament is very large, as often happens, it requires to be supported by irons, which are attached to the centre (iron) stem; of course, in this case, the lead pipe is interrupted. The ornament in the second tier is often a repetition of the one below, only smaller; but occasionally it takes the form of an open vessel, and does duty as a bird's nest (fig. 6). They appear, indeed, to have been as fond of birds in the Middle Ages, as they now are of storks in Holland and Upper Germany, where a nest is regularly made up on the top of the house against the bird's return.

The last stage generally consists of a finial, formed of four or more crockets; these crockets are cast in halves, soldered together, the stems again soldered to lead pipe, and the inner leaves to each other. This will generally be sufficient to support them; if, however, they are rather large, each crocket has a large thin piece of iron covered with lead (copper will do alone), one end of which is soldered to lead pipe, and the other to extremities of crocket, as in the girouette on the gable of north transept, Amiens. While on this subject, it may be as well to show how the largest crockets, such as those on the spire at Amiens, which are 1 foot 6 inches in length, are managed. An iron, about 1¼ inch square, has its ends split into two parts, so that it resembles the letter T; the split part is nailed on to angle rafter, and the other, which juts out, is covered with lead. On the upper surface is soldered a piece of very thick lead, to which some of the upper leaves of the crocket are attached; the end leaves next the rafter, and the stalk are of course fixed to the lead covering of spire, as usual (fig. 7). Another way of treating the medium-sized crockets was, to make the iron in the form of an L, fixed in a similar manner; the projecting part covered with lead, as usual, is soldered to the inside of the back of the crocket, in the body of which two holes are bored to keep out the wet (fig. 8). The crockets running up the sides of dormers are usually executed in this manner.

But to return to the girouette. A very favourite ornament for the upper parts was four or more thick iron wires* covered with lead, the ends of which are fixed into a thick square horizontal piece of lead, soldered on to the pipe; a little higher there is another horizontal piece, of a circular form, to which they are again soldered; the extremities of the wires end with flowers or balls (fig. 9).

FIGURES.

Another very favourite finish for a roof, especially at the east end, was a figure of the patron saint beaten out in lead. The following extract, given by M. de Laborde,† from the accounts of St. Maclou, Rouen, gives us some information upon the subject, as well as the names of the artists:—

"1514. To John Pothyn, sculptor, for having carved a prophet in walnut-wood, to serve as a mould and pattern for the works in lead."

All then the plumber had to do was to hammer sheets of lead over the wood statue until they fitted to the shape. These were cut off and soldered together again with an iron framework inside, to prevent the figure from getting out of shape; this frame was likewise useful as a means of securely fixing the whole affair. At Paris, where several of these figures have lately been executed, for the Sainte Chapelle and elsewhere, cast-iron moulds are substituted for those in wood, as will be seen by the following notice, which I owe to the kindness of M. Gerente, of Paris:—

"You are correct in thinking the angel‡ at the chevet of the Sainte Chapelle is made of lead: wood and lead are the only materials used in the fleche. For all the flat surfaces cast lead is employed, but for the ornaments and figures milled lead is hammered on to cast-iron moulds. In a few instances lead castings are met with, such as the suns in the arcades: there is no zinc used at all. The moulds for the figures are made, of course, in several pieces. The different parts of the figure having been beaten up upon them, are joined together, soldered inside, and the joinings outside made with the hammer. As to the decoration, there is no tinning at the Sainte Chapelle, but merely gilding which is done with two coats of oil yellow-tint varnish, and over it gold in leaf."

There is one difference between the ancient and modern leaden figures which I think, perhaps, deserves to be noticed. The latter are soldered together like a modern work in bronze, *i.e.* the whole of the surface is homogeneous. Now as far as I could ascertain by reference to the figures on the spire at Amiens, the former (*i.e.* the ancient ones), although soldered in parts, are, nevertheless, in two or three pieces, the joint probably being made by means of a lap, as in roofs, and the places of junction concealed by means of the folds of the drapery. In fact, more like to the ancient bronze statues at Herculaneum.*

The same method was carried out in detached pieces of carpentry covered with lead, such as pinnacles, where one, if not two of the edges is made by a lap—never by solder. In fact, it would appear to have been a principle during the Middle Ages, to lay the lead as loose as possible, and to be very sparing in the employment of solder. It still remains to be proved which is the better of these two ways of constructing figures in lead; that of the moderns is certainly the strongest; the only fear would be the chance of its cracking for want of the necessary play for the expansion of the metal.

The figure most generally placed on the apside of a cathedral, was a gigantic angel,† which was so contrived, as to answer the purpose of a weathercock by means of the wind acting on its wings. There are examples at Chatres and Rheims: the former is modern, the latter doubtful. At Evereux, the crest ended in St. Michael and the Dragon; at Rouen, with a Saint George, but of all the leaden figures which have come down to us, few exceed those on the fleche, or spire, of Amiens Cathedral, which are as large as life, and represent Our Lord, the Blessed Virgin, St. Peter, St. Paul, St. James, St. Firman, and St. Ulpha. Above them are smaller figures of angels, bearing the instruments of the passion. This fleche is truly a *chef d'œuvre*, whether we consider it with regard to its carpentry, or its leadwork. Among the many beautiful spires still left us in France, it is beyond all comparison the best. Every decoration possible to lavish upon it in the way of leadwork, has been bestowed, and that with no sparing hand. Statuary, foliage, gilding, turning, painting, are all there, and well did it deserve its title of the golden steeple.‡

W. BURGES.

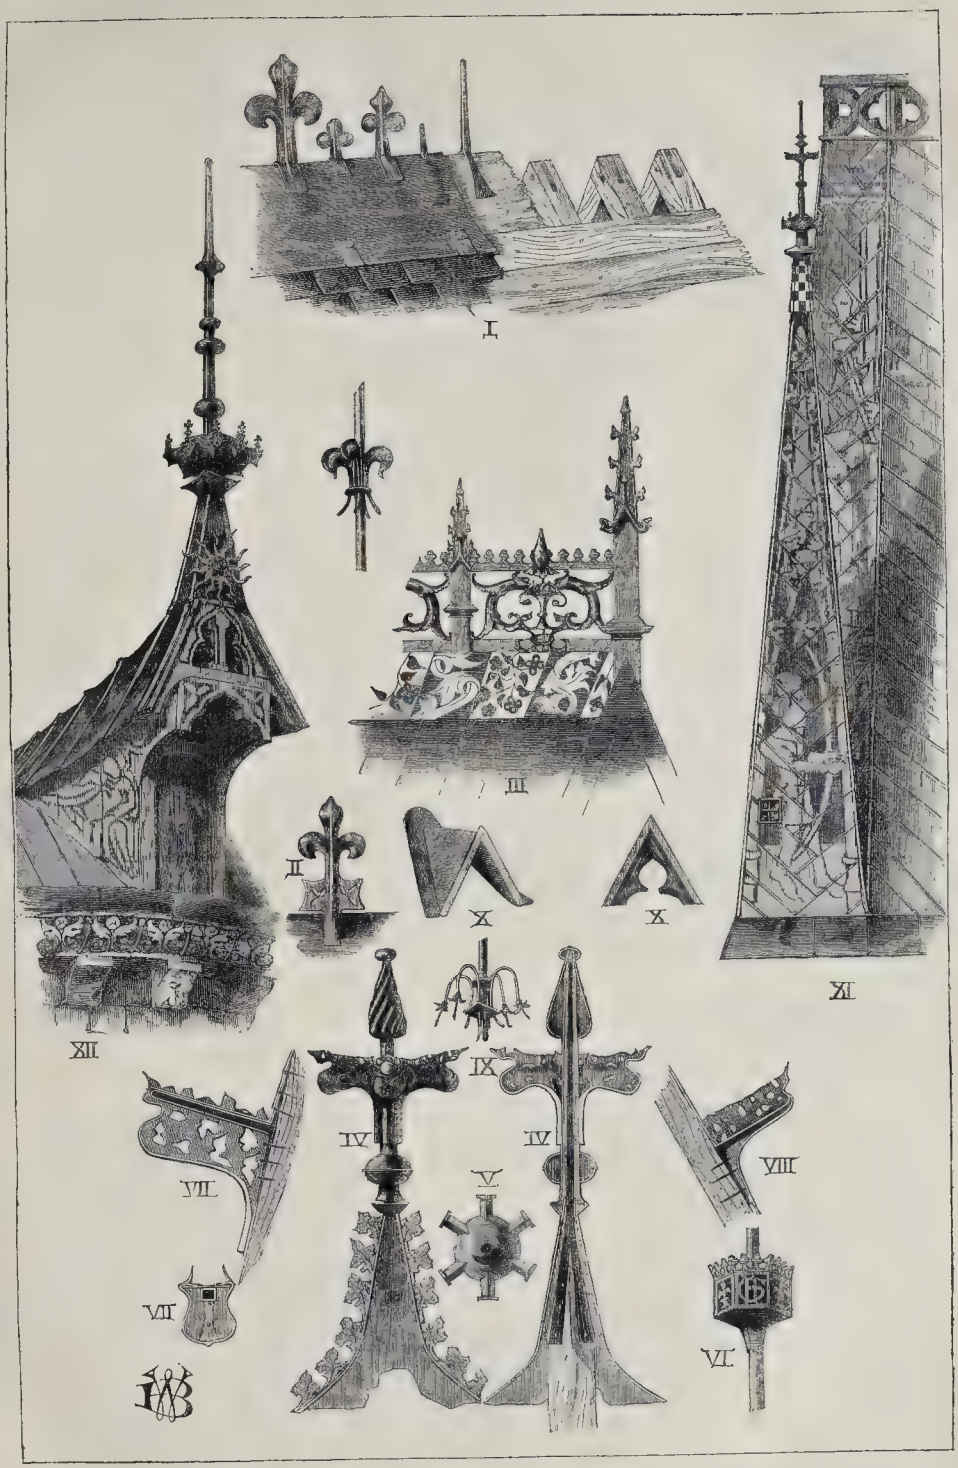
* Copper wires, as in the previous instance, can be substituted.

† Notice des "Emaux, &c. du Louvre," par M. de Laborde Paris, 1853.

‡ In some publication it is stated that this figure is in zinc.

* Several of the bronze statues in the Museo Borbonico, are made in two or more pieces, and rivetted together, the drapery, or an ornament concealing the junction.

† If I remember rightly, part of the wings of the ancient angel, are preserved in the Museum, at Chartres. They are formed of plates of copper, rivetted to one another, and pierced at certain intervals by small quatrefoils.



‡ To be continued. The foregoing was read at the Architectural Museum, Canon-row, Westminster.

CRYSTAL PALACE.

THE widow of the late Charles Geerts, sculptor, of Louvain, has sent to the Crystal Palace upwards of 100 of the original models of the statues he executed for the Hôtel de Ville, Louvain, and of the statuettes of saints which are in the halls, recently finished, in the cathedral of Antwerp. They are all Mediæval in character, and deserve attention.

The Picture Gallery has now a much better aspect than it had when we first saw it, and does credit to the energy and intelligence of Mr. Mogford. The light seems excellent.

DEARTH OF FREESTONE.—Several building works in Morayshire, according to the *Forres Gazette*, are at a stand-still for want of freestone. The demand at the different quarries has for some time been beyond the supply, and hands have been scarce. The material for the Keith Railway station is to be taken from Morayshire.

ANCIENT ORNAMENTAL LEADWORK.

CHURCH-BUILDING NEWS.

Hatfield Chase.—On the 8th, the dedication stones of two churches building in the Old Royal Chase, at Hatfield, from the plans of Mr. Joseph Clarke, the diocesan architect, were laid,—that of St. John's by Miss Chamberlayne, and that of Holy Trinity by the Master of Trinity College, Cambridge. Mr. Archer Houblon is contractor for both the churches. The church of Holy Trinity is Early English, with a tower and spire on the south side, and which will be covered with shingle from the forest. The walls will be of flint, lined with brick, and with Bath and Painswick stone dressings. The seating will be by open benches, and the chancel will have stall-seats laid on the encaustile tile floors. On the south side is the Selwyn Chapel, built by an old family in the neighbourhood. The Church of St. John is smaller, and has an apsidal termination, which it is hoped will be enriched at some future period with painted glass, &c. There is an open south porch, and a tower and bells are to be added at the west end. The materials will be the same as those of Holy Trinity Church. The Old Royal Chase is fast disappearing under the Enclosure Act.

Sibsey.—The village-church of St. Margaret, Sibsey, has now been restored. Messrs. Kirk and Parry, of Sleaford, who have acted as the architects, found, on clearing away the old work, that the church was in a more dilapidated condition than was imagined. It was found necessary to replace entirely the roof of the nave and north and south aisles, and to rebuild the chancel. The body of the church has also been re-seated in modern style, and the old cumbersome pews removed. About 2,500*l.* have been expended in the reparation of the nave and aisles. The chancel has been rebuilt at the sole expense of the lay impropriator, Mr. T. F. Gape, of St. Albans. There are three stained-glass windows, by Mr. Ward, of London. One in the steeple, presented by the Rev. G. Cape, vicar, and the Rev. T. L. Edwards, curate, is divided into two compartments, in one of which is represented our Saviour, and in the other St. Margaret. A second window, on the north side of the chancel, presented by Mr. W. Saul, churchwarden, in memory of a late daughter, represents the Resurrection of Lazarus, and Christ Healing the Sick and Lame. A third window, on the opposite side of the chancel, presented by Mr. E. B. Waite, churchwarden, also in memory of a daughter, represents Christ bidding little children to come unto him. The repairs in the nave and aisles have been executed by Mr. W. Webster, of Wyberton, and the rebuilding of the chancel by Mr. Whitworth, of Boston. The greater portion of the sum spent in these restorations has been raised by voluntary contributions.

Ipswich.—The report of the building committee of the burial board was presented for adoption at a meeting of the Board in week before last. The report stated, that while the amount of the contract for cemetery buildings was 1,284*l.* the actual cost, including extra work recommended by the committee, 204*l.* odds, and extra work ordered by the architects before the appointment of the committee, 231*l.* odds, had been 468*l.* odds beyond the amount of the contract, or, in all, 1,752*l.* odds. The architects, continued the report, had charged 5 per cent. commission on 1,750*l.* and travelling expenses, with costs of getting out quantities and extra plans furnished to Mr. Notcutt; making a total of 147*l.* 10s. There were also accounts from the contractors and others connected with the buildings, amounting to 122*l.* odds, and the total expenditure had been 1,874*l.* odds. Considerable dissatisfaction was expressed with the general result, in course of the discussion which ensued, Mr. Geard declaring his belief that the architects had cut the matter down below the mark, in order to get their plan accepted, intending, afterwards to put on the extras; and Mr. Gowing denouncing architectural competitions altogether as downright humbug, or something worse. The report was finally adopted.

Yarmouth.—On Wednesday before last the Church of England portion of the new cemetery was consecrated. The cemetery is to the north-east of the present churchyard, and contains altogether about 10½ acres; 6½ acres of which are appropriated to the Church of England, the remaining 4 acres having been set apart for Dissenters. It has been constructed at a cost of about 3,500*l.*

Enstone.—The church of Enstone having been restored, was reopened on 14th inst. By means of an estate for the repair of the church, aided by contributions of parish proprietors, the parishioners have been enabled to restore and refit the whole interior fabric of the edifice, to place a new roof on the north aisle, reseat the entire church with open seats, and otherwise to improve the building. The architect for the restorations (except for those of the chancel) was Mr. Street, and the builder Mr. George Wyatt, of Oxford.

Salisbury.—The late Alderman Smith has bequeathed the sum of 200*l.* towards placing a stained-glass window at the east end of St. Thomas's Church, in this city.

Bridgwater.—A chapel is to be erected at the Cemetery here for Dissenters. The designs have been furnished by Mr. Robert Down, architect, of this town, under whose superintendence the works are to be immediately carried out. The contract has been taken by Mr. Thomas Hutchings, builder.

Tiverton.—The outlay for the parish church restorations already noticed was about 6,000*l.* The materials used are Westleigh limestone, with Bath stone dressings. In the tower, which has had the exterior restored at an expense of about 500*l.* is a painted window by Mr. Wailes, the subjects allusive to the erection of Solomon's Temple, and a memorial to the late Mr. John Barne. Over the altar there is to be a painted window, the gift of the Rev. W. Rayer, also by Mr. Wailes, the subject being the Resurrection.

Chippenham.—Messrs. C. and A. Gibbs have executed an east chancel window for Littleton Dew Church, Chippenham, Wilts. It is in memory of the rector's brother. The window is arranged with obituary subjects and emblems

Chester.—The same artists have completed an ornamental window in St. Bride's Church, Chester, paid for by subscription, and dedicated to the memory of the Rev. Mr. Hutton, the late rector. It is placed in the east end of the church. The centre opening represents the Ascension of our Lord. The opening is 13 feet high and 5 feet wide, and the figures of the disciples are rendered of the size of life. The side openings are filled in with diaper work, on which the busts of the four Evangelists are stained.

New Brighton.—The consecration of St. James's Church, New Brighton, says the *Chester Chronicle* of week before last, took place on Thursday. The new structure is in the Pointed Norman style, and stands in a prominent position fronting the sea. It has short transepts, with side aisles to the nave, and has a full-timbered roof. The building has been constructed to accommodate 900, and of the sittings 250 are free to the poor, whilst 50 will be let at a mere nominal rental. The new church has cost 9,000*l.* in its erection, the principal portion of which has been contributed by the gentry and other inhabitants of New Brighton and its neighbourhood. Mr. Scott was the architect, and Messrs. Furniss and Kilpin, of Liverpool, were the contractors. In the east end of the building there are three stained glass windows, which were presented by Mr. Pilkington, of St. Helen's.

Clynnog Fawr.—The old church of Clynnog Fawr, near Carnarvon, has been re-opened after undergoing restoration, and the occasion was observed quite as a holiday. The open timber roofs of the building have been uniformly restored and stained. The fourteen windows have been all renovated. The outer walls are pointed in the joints with Portland cement—the inner uniformly plastered and coloured. The pews, with slight alterations, are as they were renewed some twenty-three years ago. There has been an entire refitting of the altar, rail, floor, and table. The ancient screen, supported by pillars between the chancel and transept, has been brought more into its original character, and an unsightly modern gallery above it has been removed. The ancient stalls have been restored. Four new limestone steps are placed at the bottom of the nave to ascend, and three corresponding ones at the altar. The entire floor of the tower, nave, and transepts, has been laid with new polished Yorkshire flags. The space in the chancel between the stalls and communion rail has been laid with Minton's encaustic tiles, and the space within the communion rail boarded and carpeted. The adjoining sacrarium has been restored in its groined ceiling, and made into a robing-room. A reredos for the wall behind the altar, with sacred monograms, the decalogue, &c. inscribed, and appropriate texts of Scripture over the table, are in course of preparation.

Birmingham.—The first stone of a new Presbyterian Church, to be erected in New John-street West, was laid by Mr. John Henderson, of London Works, on Monday in last week. The architect of the building is Mr. J. R. Botham, and the builders are Messrs. Hardwick and Son, all of this town. The building, which it is expected will be completed before the end of the year, is estimated to cost 2,000*l.* and will accommodate 800 persons, independent of galleries to be erected when necessary. The site cost 625*l.*

Weddington.—The parish church of Weddington, near Nuneaton, which has been under repair and restoration, was re-opened on Sunday before last. The cost of the repairs has been defrayed by the rector and the parishioners. The chancel and the altarpiece, representing the Crucifixion of our Saviour, have been restored by the rector. The Rev. W. H. Cooper and Mrs. Cooper, of Weddington-hall, have restored the transept. A Norman arch spans this transept, and two small coloured-glass windows have been introduced.

Wigton.—The portion of the new burial ground for the parish of Wigton, set apart for members of the Church of England, was consecrated on Friday before last, by the Bishop of Carlisle. The cemetery, says the *Carlisle Journal*, occupies a rising ground about a mile to the north-west of Wigton. Three acres of the ground are set apart for the use of members of the Church of England, and the remaining two for Nonconformists—the line of demarkation between the two being a broad walk and boundary stones, similar to those adopted in the Carlisle cemetery. The cemetery is enclosed by a freestone wall, 7 feet in height, except at the entrance, where a palisading is erected. On the right of the entrance-gate stands the Church of England chapel, with a vestry at one end; and on the other side are the curator's residence and the Nonconformist chapel. Both chapels are built in the Early English style, are 36 feet long by 16½ feet wide, and are fitted up in the interior with stained wood, and seats of the same material: the exteriors, however, are somewhat different. The whole of the buildings were designed and superintended by Mr. Stewart, of Carlisle, architect, and Mr. Jas. McKay was the builder.

West Hartlepool. — On Tuesday before last, the new Congregational church and schools at West Hartlepool were opened. The church is cruciform in plan, with nave, transepts, and tower. The narrow end of the triangle forms the tower which carries the stairs, and the broad end gives projecting transepts with side entrances to the vestry and boiler-house. The tower will be surmounted by a spire, now in progress, in alternate bands of red and white brick and stonework. Large schoolrooms are under the church, with vestry, boiler-house, and class-rooms attached. These will accommodate 500 children; while provision is made in the church for 800 sittings. Colour has been adapted to give relief to large flat surfaces and deepen the carved work of the screen, pulpit, and communion place. The wood work will be stained and varnished. The roof is open. The pews are low and sloping, but without doors. The windows are glazed with Hartley's patent quarry glass. The cost of the entire undertaking will be upwards of 2,500*l.* nearly 1,500*l.* of which are already subscribed. Mr. Oliver was the architect.

Sunderland.—The new cemetery at Monkwearmouth was consecrated by the Bishop of Manchester on the 27th ult. There are two chapels with belfries. The chapels are both alike, and capable of accommodating 100 persons each, with robing-rooms for the officiating clergy, and reception-houses for the dead attached. The

sexton's-house is at the entrance, connected with which is a covered gateway. The ground being high and undulating, it is walled in all round, except on one side, which is bounded by a water-course, advantage of which has been taken, and formed as a sunk fence, with waterfalls at intervals, terminating in an ornamental water. The buildings and walls are of unpitched stone, with dressed facings. The total cost, including the land, will be about 8,000*l*. Mr. Oliver was the architect.

FOREIGN INTELLIGENCE.

Novel Painting of a Market-hall.—The meat-market at Ghent is now completely free of the intolerable nuisance of flies. The simple remedy consists in the inner walls having been painted with laurel oil (*Oleum lauri nobilis?*), the smell of which the flies cannot support. Even gilt frames can be thus preserved unsoiled. The smell of the laurel oil is not unpleasant, and one easily gets accustomed to it.

Rome.—The column erecting by the Pope to the Virgin Mary, is near completion, but the sculptures are of a kind to raise pity. According to our informant, those who are accustomed to view sterling art, say that the basso-relievos which will surround the socle of the column will exhibit an utterly spoiled art taste, which must hide the poverty of the idea under a conventional drapery, and the tinsel of gilding. The Mary column will thus be one of the poorest, although the most expensive Roman monument.

Hamburg Art-Union.—The catalogue of this year's exhibition reaches 964 numbers, amongst which there are but few sculptures. This number is so considerable, that the space allotted to them will necessitate a change of specimens in the exhibition. Of Hamburg artists, fifty-three have sent in specimens, one from Rome, &c.

Berlin: Revulsion in the Labour Market of Europe.—To the draught on the European labour market, lately caused by the gold fields of the new continents, supervenes now that brought on by the re-opening of Russia, and the desire of developing her resources. The emigration of all sorts of mechanics to Russia has been, therefore, very great from Berlin, whence, amongst others, 400 cabinet-makers have left; so much so, that a deficiency of hands is already felt.

Berlin.—Hofbaurath Professor Starck was lately called to London by Prince Frederic William of Prussia. As the prince intends to re-build the palace inhabited by the late king, M. Starck brought the plans to England for inspection.—The seniors of the merchants have purchased the house, 25, Burgstrasse, to erect a new *börse* thereon. The plans have been approved, and the building is to be completed in two years.—The directors of the waterworks are obliged to have 1,300 waterspouts at the disposal of the fire-police, in case of conflagration, the cleansing of the streets, &c. A very systematic numbering, on coloured tablets, has just been introduced pointing out the places of these waterspouts.

THE DRAINAGE OF LONDON.

BOARD OF WORKS.

AT a meeting of the Metropolitan Board of Works, on the 22nd, the engineer's proposal to make the outfall for the main drainage in Erith Marshes, was negatived by an amendment proposed by Mr. Doulton, substituting Long Reach. On this amendment being put as a substantive motion, Mr. Alexander Wright moved, as an amendment, that it was desirable to carry the entire sewage by one tunnel to Sea Reach; and this being seconded by Mr. Wilkinson, Mr. Leslie laid before the Board his plan for effecting it. He showed that now, for the first time, the area on both sides of the Thames was made to form one metropolis, and he proposed the formation of one sewer on the south side from Putney to Sheerness. Providing otherwise for the storm waters, he calculated that a circular sewer, 10 feet in diameter, would answer the purpose, and he would bring the sewage of the north side across the Thames into it at two places, the Thames Tunnel affording one.

"The second question," to adopt the proposer's own words, "is, What would such a sewer cost? The various estimates I have obtained, including side entrances, &c. &c. &c. range between 15,000*l* and 20,000*l* per mile.

Let me, then, submit to your consideration the highest of these estimates, and multiply it by the longest calculated length, say 40 miles, and we have a sum of 800,000*l*.

"For which sum we should have an artificial channel from Putney, far down into Sea Reach, taking in its progress seaward the whole metropolitan sewage, and all the sewage of Erith, Dartford, Greenhithe, Northfleet, and Gravesend."

"My datum line is the bottom of the water on the bed of the Thames at Putney. From thence to Sheerness, in the river's circuitous line, is about 50 miles, and the fall in the bed of the Thames is about 33 feet. In the shortened straight line this would give me a natural fall of about 10 inches per mile, and I should have to add to this natural fall 14 inches per mile, to make up the uniform fall or inclination of the sewer to 2 feet per mile.

I should then have to raise at the terminus the sewage about 50 feet, equal to 1,200 horse-power. I have repeatedly adverted to the effects of our contemplated works on the navigation of the River Thames, and the effect upon that navigation by the abstraction of large quantities of sewage water. This important question to our commerce must occupy the serious attention of this Board, and, in the arrangement of the works which it is our imperative duty to carry out, we must endeavour to find a compensation for this loss of water in the river by the abstraction of the existing sewage water.

We must seek for this compensation by separating the storm and surface waters, and the waters for public purposes, fountains watering the streets, &c. &c. which every vestry, every district Board, and this Board also, under the 150th section may procure, and in this great metropolitan improvement is involved the total destruction of the monster nuisance of gully gratings throughout the metropolis."

At the conclusion of Mr. Leslie's statement the Board adjourned, until Tuesday next.

THE NATIONAL GALLERY.

I HAVE not felt surprised at the dissatisfaction which has been so widely expressed at recent additions which have been made to the National Gallery of Pictures, for the chief merit of the new paintings is that they are curiosities of art. It is, no doubt, to a certain extent, desirable to collect such works for the use of the students, in order that, by a knowledge of the schools of bygone times, they may be able to form a just estimate of the deficiencies and advantages of their own. In a collection, however, which is formed for the instruction and amusement of the multitude, as well as for the use of students, it scarcely seems advisable to gather together numbers of primitive works which to the great mass of visitors must seem "flat, stale, and unprofitable."

In a national collection we should above all things have a fair example of the works of our national painters, and at every sacrifice collect, when the opportunity serves, the gems of artists like Reynolds, Gainsborough, or Wilkie. At present, the first of these, our greatest English painter, is not fairly represented in our National Gallery; and what an opportunity has been missed at the late Mr. Rogers' sale. The "Strawberry Girl," and "Puck," pictures, which ought to have become the property of the nation at almost any price, have been allowed to go into private hands. Such works as these must yearly increase in value, and if these pictures are at a future time purchased for the National Gallery, the price will be greatly in advance of that at the last sale. No one can properly appreciate the genius of Reynolds until he has seen the two pictures to which I refer, and undoubtedly both artists and the public suffer a loss by the absence of these pictures, for which the addition of the curiosities will only in a very small way atone. Our sweet, elegant, and truly English painter, Gainsborough, has not been well cared for in our national collection; but I trust that better taste and judgment are coming.

AN ARTIST.

ARCHÆOLOGICAL.

THE Archæological Institute will hold their annual meeting this year at Edinburgh, from July 22nd to the 29th. After an examination of Edinburgh, aided by Mr. Robert Chambers, there will be excursions to the Tweedside Abbeys—Jedburgh, Melrose, Dryburgh; to Dirleton Castle, an early example of castellated architecture; to Dunblane, Stirling, Linlithgow, the Roman Camp at Ardoch, the Vestiges of the Wall of Antoninus, Borthwick Castle, Hawthornden, and Roslin.

The British Archæological Association will meet at Bridgewater, from Monday, the 25th of August, to Saturday, the 30th. Patrons—The Earl Portman, Lord Lieutenant of Somersetshire, and the Right Hon. and Right Rev. Lord Auckland, Bishop of Bath and Wells. During the week visits will be paid to Glastonbury Abbey, Wells Cathedral, Bath Abbey Church, and various churches and places of interest in the neighbourhood.

Part i. of Vol. V. of papers published by "The Norfolk and Norwich Archæological Society," contains a fully illustrated notice of excavations made at Burgh Castle, Suffolk, by Mr. Henry Harrod. Under the head of Norwich Pageants, Mr. Fitch contributes some particulars of the mysteries performed by the Company of Grocers, from their books between 1534 and 1570. In the list of "particulars" belonging to the company, in 1565, we find "A Pageant, y^t is to saye, a Howse of Waynskott, paynted and buylded on a Carte w^t fowre whelys."

The last published collection of reports and papers, read at meetings of the Northampton, York, Lincoln, Bedford, Worcester, and Leicestershire Architectural and Archæological Societies (vol. iii. part ii.), comprises a number of very interesting contributions, including a history of the Abbey Church of Peterborough, by Mr. G. A. Poole, a large number of illustrations, by Miss Ada Brereton, to a paper on St. Mary's Church, Kirkburn, by Mr. Charles Brereton; Christian and Classical Art contrasted, by the Rev. Brook Bridges; on Colour, by Mr. Street, and others. The best illustrated paper is one on the Churches in the neighbourhood of Newark-upon-Trent, by Mr. C. Baily.

SCENERY AND EXHIBITIONS.

Her Majesty's Theatre.—Admirably well managed, indeed, is the last scene in *Le Corsaire*,—the storm, the lurid sky, the sinking ship, and the escaping group. It is not, as some of our contemporaries called it, the "finest work of the scene-painter ever seen in England;" no one would dissent from such a remark more strongly than Mr. Charles Marshall himself: but it is, nevertheless, an excellent and effective piece of stage-mechanism and painting conjoined. Mr. Lumley has been indefatigable in providing a change of singers and dancers: the great success of the season, however, is undoubtedly Madlle. Piccolomini.

The Haymarket Theatre.—There are three very good scenes in the sparkling ballet of "The Captives," for the Spanish dancers,—the ruins of an aqueduct and distant country; the walls of the Alhambra; and the Court of the Lions in that palace-fortress, with its fountain, richly decorated walls, and columns, "which," as one of the Moorish inscriptions says, "when struck by the rays of the rising sun, one might fancy, notwithstanding their colossal dimensions, to be so many *blocks of pearl*," and this is just the effect the artist has given to those in the distance. Comedy and farce prevail here, and with good effect. Mr. Buckstone is always at home.

The Polytechnic Institution.—A full-sized copy of Raffaelle's "School of Athens," painted for the University of Virginia, United States, by M. Paul Balze, is now being exhibited at the Polytechnic, and may be usefully studied. Those who know the difficulties of art best appreciate Raffaelle. It seems to be a very good copy, but is marred by an ugly join in the canvas.

THE OPERATIVE MASONS' SOCIETY.

THE forty-sixth anniversary of the Operative Masons' Benefit Society was celebrated on Tuesday, 15th of July, at the Manor-house Tavern, Walworth, adjoining the Surrey-gardens; Mr. C. H. Smith, in the chair. At four o'clock, about seventy operatives, chiefly masons, sat down to an excellent dinner. The usual loyal toasts having been drank, the chairman proposed the health of "Sir Charles Barry and the Architectural profession collectively." Although masons were generally employed by the builders, it was to the master-mind of the architect that they were chiefly indebted for the superior part of their occupation. He (the chairman), had particularized Sir C. Barry as deserving their especial notice, because no other individual had done so much for the working mason, as that distinguished architect. The masons might conscientiously pray for the health and long life of Sir Charles, to enable him to complete the palace of Westminster; for as far as his (the

chairman's) knowledge of history and antiquities extended, he could not recollect any building, in any country, during any period of history, having been erected with such an amount of ingenious mason's work as that which is already executed, together with that which is contemplated, to finish the great work at Westminster. Thirty or forty years since, it was the popular opinion, that the art and mystery of constructing vaulted ceilings in stone, similar to those of King's College chapel, at Cambridge, or Henry VII.'s Chapel, at Westminster, was entirely lost; but under the able direction of the architect he had named, the masons of Westminster had erected an octagonal roof, 60 or 70 feet in diameter, over the central hall of the Houses of Parliament, presenting quite as much elegance of design, and, perhaps, greater constructional science in its execution, than is to be found in any building of the middle ages, proving that the operatives of the nineteenth century only wanted the opportunity to show that they were able and ready to carry out the most ingenious and beautiful conceptions of the architect, in a manner creditable to themselves, and advantageous to their employers. In the evening, the masons were joined by their relatives and friends, of the feminine gender, and dancing was continued until after midnight.

STREET PAVING.

A SPECIMEN of a new system of street paving has been recently laid down by the parochial authorities of St. George's, Bloomsbury, in Southampton-street, Holborn end, which promises, according to its promoters, to be a remedy for the evils arising from dust, mud, noise, and danger to horses.

The component parts of this paving appear to be wood and granite, in alternate rows, formed into blocks of about 2 feet in length by 1 foot in width, and 8 or 9 inches deep, cemented with asphalte. The wood having been impregnated with creosote is rendered impervious to water, and being combined with stone, the advantages of wood paving for carriage traffic are retained, without the disadvantage of danger to horses, which resulted from its absorption of water during wet weather: the broken granite, moreover, being hemmed in and cemented, appears to be less liable to that abrasion by traffic which so easily converts it into mud and dust.

If these advantages can be combined (as alleged by the friends of this system) with greater economy in laying down, greater facilities for removal, to get at gas and water mains, than have been experienced with blocks or McAdam, without a dverting to the absence of any necessity for taxing the rate-payers for such nuisances as water-carts in summer and mud-carts in winter, then indeed it would be an important step in the right direction towards mending the ways of the public in this great emporium of traffic. At present, however, we do not pretend to do more than chronicle the system.

SCAGLIOLA.

In reply to "D. W.'s" inquiry, scagliola is formed and manipulated as follows:—

The work (panel, &c.) is roughed in with gauged stuff (lime and hair and plaster), and when quite dry, Keene's cement is mixed in patches, each with a separate colour worked up with it,—chrome, sienna, black, Venetian red, &c. as may be required. It is then laid out the required thickness, and cut into triangular pieces, and pressed into the prepared ground with the fingers. Then, when quite dry, the surface is levelled down (if a pedestal, it is put into a lathe and turned), and then polished—first, with rough stone; second, with snake-stone; then flannel and putty powder, and finished up with beef fat and a linen rag. All holes must be made good with colour before polishing. THOS. GOODCHILD.

AMERICA.

THE North Baptist Church, at Hartford, Conn. now nearly finished, from the designs of Mr. Russell West, stands on a plot of ground which may be described as a rhomboid, 88 feet by 170 feet, with angles of 105 deg. and 75 deg. The site required the west front to be parallel with the line of the street, and the congregation desired to have the church and vestibules rectangular.

The walls are built of brown sandstone, uncoursed masonry; the facing neatly hammered and squared. The tower and spire stand at the south-west corner, 22 feet square at base, and 190 feet high. The vestibule is 32 feet by 37 feet, with columns, and carved capitals of Caen stone, supporting semicircular arches. The stairs in rear of the tower lead to a lecture room, 37 feet by 52 feet and 27 feet high, adjoining which is a small library in the tower. The church is 106 feet by 62 feet, and 43 feet high, divided by columns into a centre and aisles. Circular windows borrow light from skylights in the roof, and produce in the interior the effect of a clear story. Objections being made to the open timber roof, the ceilings are plastered, with ribs and enriched bosses, perforated for ventilation. The whole building is warmed by heated air from furnaces in the basement. There is an organ gallery at the west end. The side galleries are kept entirely behind the columns. The pulpit and bench ends are of oak, carved. Colour is not denied either to the casement or the walls. The semicircular arch is used throughout the building.

The glass staining was done by Mr. Henry Sharp, the decoration of the walls, by Mr. James Leslie, and carving by Mr. Aubé, all three formerly of London.

The ground is 7 feet lower at the east end than at the front. Advantage is taken of this to obtain well-lighted school-rooms in the basement. The whole cost will be about 70,000 dollars.

DEPARTMENT OF SCIENCE AND ART.

THE examination of candidates for the first certificate has this year extended to architectural drawing. The first examination took place on the 15th of July. The examination-paper was as follows:—

"1. What are the three principal mechanical actions to which building materials are subjected?

2. Name the two kinds of bond common in brickwork, and draw, in elevation, one quarter full size, the arrangements of the bricks in each case—giving the technical names for the ends and sides of the bricks.

3. To a scale of 1 inch to a foot, draw an oblong which shall represent a window space 6 feet high and 3 feet 6 inches wide: the wall above it to be carried by a *straight* brick arch 1 foot 6 inches deep. Give the names of the upper and under sides of the same, and also those at *c* and *c*; the lines *c c* forming an angle of 60 deg. with each other. Find the centre, and describe an arc showing the line of pressure in the arch. Below the opening show an inverted or discharging brick arch, the crown of which is 4 feet below the bottom of opening, and 9 inches deep. Show how the bricks would be laid, and state the object of these arches.

4. Explain by sketch the position of timbers used in single and also double framed floors, and give their names.

5. Give the names of all the timbers in the truss (a Queen's post roof), and state which are in compression and which in tension."

COMPETITIONS.

Cheltenham College.—Twenty-eight designs were sent in for a chapel to this college. The premium of twenty-five guineas has been awarded by the directors to Mr. Philip Boyce, the author of the design bearing the motto "Spes sua cuique." They have, nevertheless, returned to a design previously made by Mr. D. J. Humphris, who was connected with the institution, for execution, and have appointed the latter gentleman to carry it out. Their plea is that none of the plans sent in were suited to the site. The east side of the college has been decided upon as the site of the chapel, partly with a view to render that elevation of the building more complete, and partly with a view to giving the chapel a domestic character, in direct connection with the institution to which it will be attached.

BUILDERS' BILLS.

HORNER *v.* WARD.—The plaintiffs in this action (at the Marylebone County Court, before Mr. J. L. Adolphus) are surveyors, decorators, and house agents, of Hart-street, Bloomsbury; and the defendant is a merchant, of 3, George-yard, Lombard-street. The sum claimed was 16*l.* 17s. and defendant had paid 11*l.* into court in full satisfaction.

Mr. Horner, jun. stated that the defendant had an empty house, which they had on their books to let, and it requiring some repairs, the defendant instructed their firm to carry the alterations out. As a surveyor he could say, that the work was well done and the charges fair and reasonable.

Mr. C. King, surveyor, stated that he went over the work, and considered it well done and the charges very fair. By Mr. Keene.—Gave no notice on the other side of his intention to survey the work. The walls were not properly prepared for papering. The preparation of the walls would have incurred farther expense than what the defendant instructed plaintiff to do.

Mr. Keene said, the defence to the action was, that the whole of the work was improperly done and overcharged. His client did not dispute the claim as a matter of £. s. d but he felt bound to show builders that they could not put off scamping work upon the public, and charge first-class prices for it.

Mr. Ward said he submitted to Mr. Horner what repairs were required, and certain charges were agreed to. When it was done he was very much dissatisfied, and gave intimation to the plaintiff that he intended employing a surveyor to look at the work. The answer he received was, that they would neither meet himself nor a surveyor.

Mr. Aldridge, a master painter, said the staircase wanted another coat of varnish, as it had only had one coat. He thought it was pretty well done, but the charges were too high throughout, and the money paid into court would pay a tradesman very well.

Mr. Armstrong, architect, stated that Mr. Ward, at his suggestion, served notice to the plaintiff respecting his going over the work, but there was no one on plaintiff's part to meet him. New paper had been put on old paper, which should have been stripped off. At first sight the paper did not seem to have been varnished at all, it was so badly done: the paper hung loose and not workmanlike. He advised Mr. Ward not to pay 16*l.* as the work was so badly done. By Mr. Horner.—It is customary in their profession to send notice by letter. Mr. Ward sent notice to the plaintiff to say a surveyor was just then on the premises. Could get respectable tradesmen to do the work for the sum paid into court.

Mr. House, defendant's clerk, proved to defendant's always complaining of the work.

The Judge was of opinion that there was good ground of complaint, and gave a verdict for defendant, with full costs.

THE PUBLIC OFFICES.

THE Select Committee appointed for the purpose of considering the best means of providing accommodation for the various Public Departments in the neighbourhood of Downing-street say in their report,—

"Your committee are of opinion that it is most desirable for the public service, both as regards economy and efficiency in the transaction of business, that there should be a concentration of the public offices, and that such concentration should be effected in the immediate vicinity of Whitehall and the Houses of Parliament."

"Your committee have taken evidence as to the sum for which the property comprised in the area bounded by the back of Richmond-terrace, the north front of the Irish Office, and Downing-street, on the north; New Palace-yard and Great George-street on the south; the river Thames on the east; and St. James's-park on the west, can be obtained. That space includes, with the buildings in Downing-street, 825,275 square feet, one-half of which it is calculated must be devoted to open spaces, and the other half to new buildings. Of this area, 171,638 square feet will be required for the offices before alluded to; 42,600 square feet for the accommodation of the Admiralty business now conducted at Somerset House, and 151,535 square feet for the other offices enumerated in the schedule appended to the evidence, leaving for additional buildings likely to be required, 46,864 square feet."

"It has been shown by your committee that, for reasons set forth in the evidence, it would be an economical arrangement to acquire, at the same time, the property between the north side of Great George-street and the Broad Sanctuary, together with the west side of Princes-street.

"Your committee recommend that, in case Parliament should sanction the acquisition of the properties before referred to, the design of the different public offices to be erected on the proposed site should be submitted to public competition."

Notices of Books.

Geometry of the Three First Books of Euclid, by direct Proof from Definitions only. By HENSLEIGH WEDGWOOD, M.A. London: Walton and Maberly. 1856.

THE "Elements of Euclid" have hitherto held their position in this country as the best introduction to the science of geometry. This has arisen from the rigorous mode in which the subject is treated, and the clear way in which conclusions are made to depend upon premises. The only work which has in any way superseded Euclid is that of Legendre, which is read by students on the continent; but although his Elements may surpass those of Euclid in elegance, yet much of the rigour of the latter has been sacrificed thereto. Euclid's Elements are undoubtedly full of defects, but of such a kind as can be remedied by the teacher. Mr. Wedgwood's work is one which may be found useful by the teacher in suggesting modes of reasoning different from those employed by Euclid, but it is not a book which could be placed in the hands of the student as an introduction to geometry. The definitions on which the whole is founded are clear enough to those who are advanced in knowledge, but would not be sufficiently so to the elementary student. The method of proving the equality of two figures

by superimposing one on the other may be used with advantage much more frequently than we find it in the Elements; as, for example, in the celebrated *pons asinorum*, in the proof of which it is employed by Mr. Wedgwood, and in which it has also been used by eminent mathematicians. The indirect mode of reasoning called the *reductio ad absurdum* is one which Euclid generally employs in the proof of converse propositions, and is certainly as rigorous and, we believe, as clear to the understanding of the student as the direct method of proof: our author, however, appears to think that it should be avoided as much as possible; but the process of reasoning which he in some cases substitutes for Euclid's indirect proof is in reality itself only *indirect* proof under a disguised form. The mixing up the third with the first book is taking a liberty with Euclid which is not justified by the advantages supposed to be gained thereby.

VARIORUM.

"The World's Highway" is the title of a pamphlet published by Weale, Holborn, and containing a reprint from the *Calcutta Review*, for March, 1856, of an article on a project by Mr. R. M. Stephenson, the managing director of the East-India Railway Company, for what may be called a through route of railway to India. The scheme is twofold, the greater and more complete comprising a continuous line, *viâ* Constantinople, &c. through Aleppo and Bagdad to Bussorah, at the head of the Red Sea, thence along its north-eastern shores, and along the coast of Mekran to Hyderabad and Hindostan. On the large map descriptive of this scheme, another is even shadowed out in the future distance branching off near Constantinople, and running along the south coast of the Black Sea by Sinope and Trebizond, thence boldly plunging into the interior by Erzeroum, Teheran, Herat, and Afghanistan to the Punjaub. Both routes would be united with the European system through Belgrade and Vienna. The minor and less improbable scheme would have a great break at Bussorah, whence there would be the usual steaming down the Red Sea, and the railway would be continued from Kurrachee, and thence run to Bombay. We have seen quite enough in our day to induce us to hesitate before dismissing even the vastest of these schemes as impracticable, but we have even some hope of seeing the more moderately extensive one, or something like it, at least, fairly carried out in course of not very many years. The idea of carrying the iron horse, and the wonders of his iron way, into the regions of the Arabian Nights, is not so preposterous as it may appear as yet to some.——In the *Edinburgh Review*, for July, there is an interesting article on the Growth of the Map of London, treating mainly of Maps and Directories, statistics and provision, &c. In allusion to the nativity of London residents, the writer remarks, that few persons have the slightest conception of the extraordinary number of country people residing in London. He estimates the number of actual natives of London at less than one-half of the whole population: in other words, more than half of that population consists of country people! Who can speak of "London for the Londoners" after that? In fact, as we have before noted, London is an *omnium gatherum*, not only from all parts of England, Scotland, and Ireland, but from abroad as well, there still being an amalgamative process going on that reminds one strongly of the ancient origin of the Anglo-Saxon. There are no less than 110,000 Celts from Ireland in London. There are no less than 37,000 Devonshire people, 34,000 Hampshire people, and so on. The 30,000 Scots are really a modest contribution by comparison with the country English and the Irish in London; and the Scots seem scarcely, therefore, to merit the reputation they have for "coming south," so far as regards the great English centre at least. There are even 30,000 *foreigners* residents in London, 10,000 of them German and 7,000 French. As we have before pointed out, London actually contains more natives of certain English counties than the capital towns of these counties themselves contain.——"Social Delusions concerning Wealth and Want," is a suggestive little volume, by one who evidently thinks for himself, and whose thoughts, however much one may differ from him on many points, are well worthy of grave consideration. The author is Mr. Richard Jennings, of Trinity College, Cambridge, and author of a work on the natural elements of political economy. Messrs. Longman and Co. are the publishers of the present work. Mr. Jennings is no slavish disciple of any school of political economy: he rather aims at the introduction of a new system, on which we cannot well enter, but which it is both interesting and instructive to contrast with the old, whatever view one may feel inclined to take of either. We could pick out many points on which we think the author's views are wrong, but there is much on most important principles in which he is evidently right and our more established teachers mistaken; and, on all points, the book is well worth reading.——We are pleased but by no means surprised to learn that the first edition of Mr. Timbs's "Things not generally known familiarly explained," has been exhausted, and a second edition now published (Bogue, Fleet-street). The work is even improved on various points, and truly forms "a book for old and young."——"The Stereoscope: its History, Theory, and Construction, with its Application to the fine and useful Arts and to Education," by Sir David Brewster, has been published by Murray, of Albemarle-street. To those (and they must now be many) who desires to understand the mystery and the history of that new wonder of the day, the stereoscope, which affords amusement and instruction to so many thousands, there can be no better or more standard work to consult than this by Sir David Brewster. The present volume is illustrated with fifty wood engravings, and gives a complete account of the stereoscope in theory and practice, a short chapter on its application to sculpture, architecture, and engineering inclusive.——Two very useful little books for the young, whether at school or at home, have just been published by Messrs. Longman and Co. of Paternoster-row. One is titled, "A complete Catechism of the Descriptive Geography of England, compiled for the use of Schools and private Families," by T. Challener. The other is titled, "The Stepping-stone to Natural History," by James Owen; and contains an account (in the form of question and answer, like the other compilation just referred to) of the vertebrate or back-boned animals,—viz. mammalia, birds, reptiles, and fishes.

Miscellanea.

FALL OF WALL, HENRIETTA-STREET.—On Saturday night last, a party-wall, recently erected between a house about to be built at the corner of Bedford-street, Covent-garden, and the offices of the Board of Works for the Strand district, fell to the ground from the level of the one-pair floor. Fortunately no person was hurt. The accident is ascribed to the proceedings of the "old material men," who were taking down the house at the corner.

IRISH RAILWAY PROGRESS.—The opening of the Limerick and Foynes Railway took place on Thursday before last, the Lord Lieutenant and the directors of the line being present. Of the entire distance to Foynes—about thirty miles in extent—the line has been perfected as far as Rathkeale, a point 17¼ miles from Limerick. Mr. Dargan is the contractor, and Mr. Lefanu, engineer-in-chief to the undertaking.——Arrangements, it appears, have been recently made, which can hardly fail to secure the immediate construction of ample railway accommodation to the western and northern ports of Connaught. Two lines are said to be likely to be constructed—one leading from Athlone to Sligo, and another from Athenry to Castlebar. Some of the Galway interests are in favour of a line to Tuam, making Tuam the terminus, but those who take a more comprehensive view of the question wish to run the line to the confines of Mayo, there to meet the Castlebar continuation, and thus turn the whole tide of the Mayo traffic into the Galway line.——A prospectus for a direct railway from Newry to Armagh has been published.——The sum of 30,000*l.* will be lost, it is said, by the Great Southern Railway from Limerick to Cork, by the forgeries of the convict Knighting.——In consequence of the absorption of labour by the Roscrea and Parsonstown Junction Railway, some farmers and gentlemen in the neighbourhood of the new work, have had to increase the hire of their men to 1s. 6d. per day.

BUILDERS' BENEVOLENT INSTITUTION.—A meeting of the committee appointed to carry out the design of presenting a testimonial to Mr. Thomas Cozens, as the founder of the Builders' Benevolent Institution, was held at the offices of the Charity, the other day. Mr. G. Bird, the treasurer, presided. Mr. Jos. Bird, the hon. secretary, remarked that several parties had subscribed for the testimonial, and amongst them Mr. Alderman Cubitt, M.P. who had put down his name for 5*l.* 5s. It was to be hoped that gentlemen who are connected with the trades represented and relieved by this institution would at once come forward, as the list would shortly close.

NATIONAL WATT TESTIMONIAL.—Donations of materials for the Greenock monument were made last week from the quarries of Giffnock, Ward-hill, Nitshill, and Arden, amounting to 2,000 tons. Stones have arrived from Montreal, the Giant's Causeway, the Isle of Man, &c. &c. Valuable contributions are expected from Italy; and Cornwall and Tipperary will add to the mass. Several shipowners on the Mersey and Clyde have offered to transport, free of charge, from any port to which they trade, materials of any character or dimension tendered for incorporation in the Watt Testimonial. A contribution has just arrived in the form of a single stone of large dimensions from the Seneca Quarry, on the Potomac, Maryland, U.S. the gift of a former townsman, Mr. Gilbert Cameron, contractor for the erection of the Smithsonian Institution Buildings. The site of the intended monument has been marked out by Mr. David M'Intosh, of London, the architect who designed and carried out Sir Gabriel Wood's Mariners' Asylum, and the ground is in course of being levelled, previous to the excavation of the foundation.

THE METROPOLITAN TURNPIKE ROADS.—The Select Committee of the House of Commons have made their report. Impressed with the great inconvenience of the existence of tollgates in the populous districts of the metropolis, and of the importance of providing, if possible, some mode of remedying this inconvenience, the committee suggest their re-appointment next session for the purpose of completing the evidence. As a proof of the greatness of the grievance complained of we may quote the evidence of Mr. Arthur Ashpitel, an owner of land and house property in Hackney and Clapton. He shows that the vexatious and exorbitant tolls levied by the trustees of the Lea-bridge-road are a serious burden on his territory, and, in fact, operate to prevent the leasing of some of his property altogether, the tolls deterring persons from coming forward as tenants. There are so many gates that Mr. Ashpitel, in driving five miles, is often obliged to pay four gates, viz. the Lea-bridge-gate, the Clapton-gate, the Ball's-pond-gate, and the City-road or New North-road-gate. A heavy toll at Ball's-pond does not clear a second gate at Dalston, within about a mile and a half, and if the traveller try to evade this second toll by a by-road, he is stopped by a private tollbar at Hackney, set up by a special act of Parliament.

PUBLIC BATHS AND WASHHOUSES FOR THE CITY OF LONDON.—At the Court of Common Council, last week, Mr. Abraham moved "That the physical and moral condition of man is much influenced by cleanliness in his dwelling, person, and apparel; that the want of public baths and washhouses in this City is severely felt by the labouring and poor population; and that it be referred to the City Lands Committee, the Coal and Corn and Finance Committee, and the Improvement Committee, to consider and report to this court the best means of supplying the want alluded to, and the estimated cost thereof; and whether a suitable place can be found in the City of London for the erection thereof." Mr. Ross seconded the motion, and Mr. H. L. Taylor moved the previous question, by way of amendment. Mr. Bell seconded the amendment, and, after some discussion, the amendment was negatived by a majority of 12—the numbers being 30 and 18. The original motion was then carried.

SALE OF BUILDING SITES AT NORWICH.—The following is the result of a sale of building sites, last week, by auction. Lot 1, 1,265 square feet, having a frontage of 73 feet on London and Opie-streets, sold for 572*l.* Lot 2, 1,048 square feet, frontage 27 feet 6 inches, sold for 466*l.* Lot 3, 928 square feet, frontage 21 feet 6 inches, sold for 170*l.* Lot 4, 840 square feet, frontage 21 feet 6 inches, sold for 170*l.* Lot 5, 557 square feet, frontage 38 feet, sold for 175*l.* Making a gross sum of 1,553*l.*; being after the rate on an average of 6s. 10d. per square foot, or about 15,000*l.* per acre; the highest price being after the rate of 9s. 0½d. per square foot, and 20,000*l.* per acre.

ELEMENTARY DRAWING FOR CLASSES.—Mr. T. J. Rawlins puts in a claim for more consideration than he has obtained in respect of the adoption of his system of Elementary Drawing for Classes by the Government Department at Marlborough House. It has been used by him for many years, at St. Mark's College, Chelsea.

GAS.—The sudden and unexpected rise in the price of gas at Ware, from 4s. to 6s. per 1,000 cubic feet has induced the consumers to think of establishing a rival company. Complaints prevail, too, both as to the quality and the quantity of the article provided. The Limited Liability Act, it is thought, will facilitate matters, either as regards the formation of a new company or the bringing the old to reason.——The Limited Liability Gas Company in Stockton have purchased the works belonging to the old company, and thus put an end to the differences that existed between them. New and spacious works are being erected, and the old works are to become a gas depôt for the south end of the borough.——The builders of the large gasometer lately erected in the gas-works at Boston were last week engaged in making improvements and alterations, when a shore gave way, and the gasometer fell to the bottom of the tank, and was seriously damaged. This is the third accident, it is said, which has occurred since the erection of this gasometer, which is thought to be too large to be manageable.——The Cupar Gas Company directors have just announced a return of 10 per cent. to their shareholders, and a reduction of 10d. per 1,000 cubic feet to their customers. The price will now be 5s. 10d. The profits are said to be on the increase as the price decreases.——The fourth gas-work erected for the Sultan's palaces at Constantinople was put in operation on 19th May, at the new palace on the Bosphorus, on which occasion the large chandelier, weighing about 10 tons, with 464 lights (sent from London, and supposed to be the largest in the world), erected in the hall of audience, together with the gardens, orangeries, &c. were brilliantly lighted up, in the presence of the Sultan, the ladies of the harem, and officers of state; the whole presenting a most lively and interesting appearance. The engineer of the works, Mr. James Crawford, was personally complimented by the Sultan for the satisfactory manner in which the works and lighting-up had been completed. The work at the new palace consists of forty-two retorts and four gasometers. More extensive works, in connection with the Turkish government, are in course of erection, under the superintendence of the same gentleman, to light up Tophana, Galata, Pera, &c.

SUSSEX ARCHÆOLOGICAL SOCIETY.—The annual meeting of this society was held on Thursday in last week, at Bodiam Castle. A large assemblage proceeded at once to view the old church of Etchingham, the peculiarities of which were explained by Mr. Slater, architect. After the inspection, many of the party repaired to the rectory, where refreshments were provided for the members of the society. Omnibuses and other vehicles were in waiting to convey them to Bodiam, a distance of five miles from the railway. *En route*, a visit was paid to the old mansion of Haremare. On arriving at Bodiam, the members who had arrived by railway were met by many others who had reached by private conveyances. The first object viewed was the church, which has recently been restored and decorated at the expense of Mr. W. Cubitt. The castle was, however, the chief point of interest. After inspecting it, about 300 sat down to dinner, in a large booth in a field near the castle. In course of the evening, Mr. Mark Antony Lower read a paper on the descent of the manor and castle of Bodiam, a report of which appears in the *Brighton Herald*. The chairman, in the course of his speech, stated that there was a gentleman present who could prove that the Roman city of Anderida was not Pevensey, in Sussex, according to the views advocated by the society, but Newenden, in Kent. This remark called forth Mr. Lower, who dared the gentleman (whose name did not transpire) to the proof of his assertion. The challenge, however, was not taken up. Thirty-three new members were admitted at the Bodiam meeting.

GREENWICH.—On the 19th, Mr. Gutch, of Paddington, entertained a number of his brother-district surveyors, at the Trafalgar, including Mr. Donaldson, Mr. Foxhall, Mr. Kendall, Mr. Good, Mr. Howell, Mr. Henry Baker, Mr. Snooke, Mr. T. H. Wyatt, Mr. Charles Mayhew, and others. Such meetings of men engaged in similar duties, and, moreover, in other parts of their practice brought into collision with one another, have a beneficial effect, tending to produce uniformity of practice, and to remove asperities.——Her Majesty's ministers came to the same house, at the same time, to eat their white-bait dinner: they landed on a dirty old coal-barge, and were received by two or three men in dirtier shirt-sleeves. We are certainly a primitive, inartistic, and unpretending people. The only demonstration made on the occasion, was the arrival of four boat-loads of the boys of the Marine Society, who came out, apparently, to show how well they couldn't row, and to drink a certain amount of beer as their reward: they ought to be taught better.——Poor Bellot's obelisk is not well placed. It is squeezed into a small gusset-shaped piece of ground, surrounded by iron railing.

COLNEY HATCH ASYLUM FOUNDATIONS.—At a recent meeting of Middlesex magistrates, Mr. Northall Laurie said,—"Colney Hatch Asylum had only been open about five years, and had cost the county considerably over 200,000*l.*; and it was in circulation that the present state of that important building, of which so much had been said, was such that the committee had to call in Mr. Lewis Cubitt, the architect, to examine the same; that that gentleman had made a careful survey, and had sent in a report giving a most unsatisfactory account of the foundation of the asylum. There was a frontage of 1,700 feet, the whole of which he heard would require underpinning, and the roof and superstructure was in an equally unsatisfactory state. He wished to know if that was a correct statement, and if so, when the report of Mr. Lewis Cubitt would be submitted to the court?" Mr. Cottrell replied, that the committee had received reports on the subject, and had forwarded them to the architect of the asylum for his reply. However, he could not go the length of the statement of his learned friend (Mr. Laurie) that the whole of the foundations would require to be underpinned; but he understood that as a difficulty had been experienced in carrying off a large quantity of stagnant water, it had, to use the expression contained in the report, "eaten into the foundation," and had thus created a subsidence, followed by a sinking of the roof.

WOOD PLANING BY MACHINERY.—A planing machine of extraordinary dimensions has lately been manufactured by Messrs. John McDowall and Sons, of Johnstown, near Glasgow. It is capable of working all descriptions of wood, from ¼ inch to 6 inches in thickness, and from 3 inches to 12 inches in breadth, running through at the rate of 50 lineal feet per minute. The operations of planing, thicknessing, feathering, grooving, and jointing, are all performed at once.

MASONS' STRIKE, CARDIFF.—This strike is virtually at an end, the masters having succeeded, with one exception, in replacing the workmen from other places. Messrs. Rennie and Logan, it is stated, have yet room for a few hands on their contract for the wall at Cardiff gaol; but they expect in a short time to obtain all they want, as additional workmen are continually arriving. The principal cause of this termination is doubtless that the workmen demanded a higher rate of pay than the natural market rate. The wages of Cardiff previous to the strike were higher, our correspondent states, than in Newport, Merthyr, Swansea, Bristol, and all other places within a distance of fifty miles. They were also entirely unsupported by public opinion, and the unreasonable nature of their demands were pointed out in a former number of the *Builder*.

MR. RAWLINSON, C.E.—The *North and South Shields Gazette*, in a leading article commenting upon the distribution of marks of honour conferred for services during the late war, alludes to the Sanitary Commissioners, as having received the "cold shoulder from the incapables at the head of the medical department." The claims of Mr. Rawlinson are especially referred to:—"He laboured in the East earnestly and well; and however much the heads of the Army Medical Department may strive to shoulder aside their merit, there is no doubt whatever that to the Sanitary Commissioners mainly belongs the credit of placing the hospitals and the camp in the favourable position, as to public health, which they have since the spring of 1855 enjoyed. Mr. Rawlinson, we say, laboured earnestly and successfully in his duties, until struck down."

ARCHITECTS AND JURIES.—I have been summoned to form a jury at the Durham Assizes, where I shall probably be detained four or five days, some twelve miles away from home. This, I presume, I am bound to do; but does it not appear strangely inimical to justice and common sense that I should be held legally responsible for fatal accidents which may happen to occur on works erecting under my superintendence elsewhere, on the presumption that I ought to be always there, as in the case of Mr. Abrahams? I should be glad to do something, if I knew *what*. ARCHITECT.

[ADVERTISEMENT.]

TO THE EDITOR OF THE "BUILDER."

MESSRS. CLARK and Co. of 15, Gate-street, Lincoln's-Inn-fields, having erected at our premises two very large revolving-shutters, one weighing upwards of two tons, we feel much pleasure in recommending them, having acted exceedingly well during the whole of the three years they have been in use; also for the lowness of their charges and rigid punctuality, entitling them to the support of all those with whom durability is economy and time saved money made.

Our shutters may be seen nightly in active operation at eight o'clock.

SOWERBY, TATTON, AND COMPANY, Linendrapers. Regent-circus, Oxford-street.

TENDERS

For the erection of chapels, lodges, and entrance-gates in the new cemetery at Scarborough, were opened by the Burial Board on Tuesday last, and those marked * were accepted:—

Masonry—			
Wright and Peel, Bradford	£1,360	0	0
John Whitehead, Harrogate	1,253	10	0
Wm. Dove, Scarborough	1,163	12	2

For the erection of a carpet factory, for Messrs. Crane and Barton, Kidderminster. Mr. T. E. Bland, architect. Quantities supplied:—

Ferguson	£3,950	0	0
Barnsley and Sons	3,790	0	0
Thompson	3,786	0	0
Ankrett	3,560	0	0
Smith	3,550	0	0
Webb and Sons	3,489	0	0
Walker	3,264	0	0
Bruman	3,065	0	0

For extension of Messrs. H. T. Dixon and Co.'s carpet factory, at Kidderminster. Same architect. Quantities supplied:—

Barnsley and Sons	£2,350	0	0
Webb and Sons	2,110	0	0
Burkett	1,860	0	0
Walker	1,833	0	0
Ankrett	1,780	0	0

For the erection of the Leicestershire Banking Company's premises, at Market Harborough. Same architect. Quantities supplied:—

Lindley and Firn	£1,760	0	0
Herbert	1,697	0	0
Norman and Son	1,665	0	0
Burdett	1,615	0	0

For the erection of a villa residence, at Pinner, Middlesex, for Mr. Benjamin Weall, sen. Mr. Henry Mawley, architect. Quantities supplied by Mr. Lane:—

Patience	£1,932	0	0
Woodbridge	1,898	10	0
Anson	1,884	0	0
Mansfield	1,859	0	0
Matthews	1,847	0	0
J. Clemence	1,789	0	0

For the tanks and engine-house for deodorizing works, and main outfall sewer, for the township of Luton Local Board. Mr T. L. Evans, engineer:—

Williams	£3,720	0	0
Rowe	3,617	0	0
Coker and Oakes	2,760	0	0

For the erection of new county court and magistrates' rooms, &c. Alfreton, Derbyshire. Mr. Benj Wilson, architect:—

Lindley and Son, Mansfield	£1,400	0	0
Heath and Watts, Chesterfield	1,156	10	0
Joseph Evans, Greenhill-lane	1,040	0	0

For additions to the Pavement Chapel, Hoxton. Quantities supplied:—

TO CORRESPONDENTS.

"*Nelson, in Trafalgar square*." The statue of Nelson, in Trafalgar square, is made of stone similar in most respects to Craigleith: it came from a quarry belonging to the Duke of Buccleuch, at Granton, three or four miles from Edinburgh, in the same line of hills as the Craigleith. The stone is very like Craigleith, but not quite so hard, and but very slightly laminated.

"N."—"A. S. S."—"W. R."—"A Constant Reader."—"H. C."—"Mr. N."—"C. K."—"J. B. W."—"Sides" (the "Soane Medallion" is of course a valuable testimonial).—"G. G."—"Mr. M. E."—"F. W."—"J. E. B."—"R. D."—"E. C."—"P."—"J. C."—"F. D."—"G. T."—"A Painter."

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

ADVERTISEMENTS.

THE ARCHITECTS', BUILDERS', ENGINEERS', and SURVEYORS' REGISTRY OPEN to EMPLOYERS' (free), from TEN to FOUR o'clock.—Several thoroughly efficient Surveyors, Levellers, Clerks of Works, and Draughtsmen now on the Register. Efficiency ascertained before recommended.—Apply to Mr. RICHARDS, Engineer and Surveyor, 4, Trafalgar-square.

TO SMITHS, &c

WANTED, a good FIREMAN, who thoroughly understands range and jack work, and can take the general routine of a jobbing shop. Unexceptionable references as to ability and character will be required.—Address, A. Z. care of Messrs. Wilson, Jasanner's, Wardour-street.

WANTED, an OUT-DOOR APPRENTICE to the MASONRY, in a respectable building establishment. A premium required. Progressive wages will be given.—Apply, in the first instance, to Mr. HAMILTON, 4 East Side, Comberwell.

WANTED, by a London Architect, a neat and expeditious DRAUGHTSMAN.—Address, SIGMA, No. 8, Clayton-place, Kennington-road, stating age, references, and salary required.

TO BUILDERS' FOREMEN.

Frontage 41 feet, by 70 feet deep.—For particulars, apply to Mr. W. H. HEATH, Surveyor, 7, Great Winchester-street, Broad-street, City.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be SOLD for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's Strand.

FREEHOLD LAND TO BE LET, on the river Thames, between the river and the Victoria Docks, being very near the dock entrance, on building leases for ninety-nine years. This land has the double advantage of river frontage, but it is bounded on the land side by a branch of the Eastern Counties Railway, into which sidings can be made.—Plans of the property may be seen, and particulars had of Mr JOHN OAKLEY, Land Agent and Surveyor, No. 60, Great Ormond-street, and of Messrs. KINGSFORD and DORMAN, Solicitors, No. 2, Essex-street, Strand London.

TO BE SOLD, a most eligible PLOT of FREEHOLD BUILDING LAND (land-tax redeemed), near Clapham-park, on a high situation, sufficient for about forty-four houses, suitable for fourth rate houses each to be let with a large quantity of Sand. The houses readily let; or a portion of the Land will be Sold.—For particulars, apply to R. G. Cate of Mr Doyle, 4, Mecklenburgh-square, Brunswick.

EAST HAM and BARKING, ESSEX.—TO BE LET, on Building Leases, several desirable PLOTS of LAND, close to the Rising Sun Inn at East Ham, and near the Station at Barking. Frontage 60 feet; depth, about 150 feet. Well adapted for the erection of houses of from £25 to £35 a year. For particulars apply to RICHARD NICHOLSON, Esq. Solicitor, 4, Old Palace yard, Westminster; or to THOMAS SMITH, Esq. Architect, 26, Hatton-street, Hammersmith.

BUILDING LAND, at HATFIELD, Herts. TO BE LET, on BUILDING LEASES, several eligible PLOTS of LAND, near the Railway Station, fronting the high-road to St Albans, and well calculated to suit the demand for Villa Residences, in this healthy, dry, gravel, Brick and Sand in the immediate neighbourhood.—For particulars, apply to RICHARD NICHOLSON, Esq. Solicitor, 4, Old Palace-yard, Westminster.

VALUABLE SITE for BUILDING, TO BE LET, or SOLD.—The Directors of the Western Bank of London are prepared to receive TENDERS for the SURPLUS BUILDING GROUND in BROOK-STREET, adjoining the Banking-house, in Hanover-square. Particulars may be had on application to Messrs. RYMER, MURRAY, RYMER and JARVIS, No. 15, Hanover-street, Hanover-square, to whom the Tenders may be addressed.

BUILDING LAND, in eligible situations. One lot is in Kentish-town, partly covered; the other is at a railway station, eight miles from town, where there is an excellent opening for a good Public-house and Stabling, at the Station-gate. And also Lot 3, semi-detached Villas, let at £40 per annum, to 35s per annum. Money would be had if required.—Apply to THOMAS NUNN and SONS, 21, Lamb's Conduit-street, Foundling Hospital.

BUILDING LAND TO BE LET, at HALLSVILLE.... Term 1,000 years, for small cottages.
CANNING TOWN " 1,000 " for small cottages.
NORWOOD..... " 1,000 " for villa residences.
STRATFORD .... " 100 " for small cottages.
POPLAR..... " 98 " for fourth-rate houses.
Advances [illegible] per cent. on such estate
Apply to Mr Wm ELLISON, Architect, Stansby road, Lymehouse

STRATFORD, ESSEX. — FREEHOLD LAND, within three miles of London, exonerated from land-tax and free of tithe, TO BE LET, on Lease, for a long term of years, in large or small plots, suitable for manufactories or building purposes.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 3, Bloomsbury-square London

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with power of enfranchisement. Plots from one acre for large residences, smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BUCKNOLL, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-inn-square.

BRIXTON.—TO BE LET, elegantly Furnished, or on lease, Unfurnished, a compact and very desirable detached VILLA RESIDENCE, with conservatory, large flower and kitchen garden, forcing-house, coach-house and stable, situate in Acre-lane, near the church, with omnibuses to the City and West-end every five minutes. Furnished, 140l.; Unfurnished, 80 guineas.—Apply at 27, Acre-lane, Brixton.

VALUABLE FREEHOLD LAND, Upper Holloway, near the Archway Tavern.—TO BE SOLD or LET on Building Lease for 99 years, direct from the freeholder, a piece of valuable LAND, near the Archway Tavern, Upper Holloway, having a front of about three hundred feet to the road, averaging to depth 100 feet to 135 feet. The party taking this land may build thereon an inn or tavern, a privilege not granted to the owners who have purchased the adjoining land.—A plan may be seen, and further particulars known on application to R. W. POWYS, Esq. Solicitor, 38, Russell square; or Messrs. DENT and SON, surveyors, 36, Southampton-buildings, Chancery-lane, and Camden-town.

BUILDING LAND, fronting a Main Metropolitan Road, at UPPER HOLLOWAY. — TO BE LET, on BUILDING LEASE, for ninety-nine years, a valuable PLOT of FREEHOLD LAND, with a frontage of 276 feet, by an average depth 115 feet. The sewer is built in front, and the land inclosed by brick walls. Views, Plans and particulars to be had at the Office of Messrs. DENT and SON, Surveyors, 36, Southampton buildings, Chancery Lane and Camden-town.

TO POTTERS, BRICKMAKERS, and OTHERS. — TO BE LET, ELEVEN ACRES of LAND, containing an inexhaustible supply of pipe-clay, brick-earth, fire-clay, and fine sand, situate near several commercial towns, in the county of Hants. The whole of the erections and plant can be rented at a moderate sum. Coming in for stock very trifling.—Specimens can be seen, and further particulars had, by application to Mr. S. BROAD, Auctioneer and Valuer, Above Bar, Southampton.

TO CARPENTERS, PACKING-CASE, and CABINET MAKERS. TO BE LET, one mile north of the Bank, a roomy and convenient WORKSHOP, 60 feet by 18 feet; also a store-room and counting-house, gas-fittings, desks, &c. complete, at a low rental. A small stock of manufactured joiner's work, ironmongery, and well-seasoned material, may be taken at a valuation, or not. The work-hop let separate, if preferred.—Address, C T Office [illegible] Bank.

WHARF TO BE LET.—To QUARRY PROPRIETORS, CONTRACTORS, STONE and SLATE MERCHANTS, and others requiring waterside premises. TO BE LET (the remainder of the lease), a WHARF, with good depth of water; also a substantial DWELLING and COUNTING-HOUSE on the same, situate on the south side of the river, below bridge, with immediate possession. Rent, low. Apply by letter, with real name and address, to A. Z. Mr. Syrett's, Stationer, 47, Old Broad-street, City.

WHARF and PREMISES.—TO BE LET, or the LEASE TO BE SOLD, a WHARF on the REGENT'S CANAL, having a frontage of about 140 feet, with large shed; the upper part adapted for a granary, dwelling-house, and range of stabling.—Apply to Mr. ST. QUINTIN, 36, Royal Exchange.

A FIRST-RATE WHARF, HOUSE, and STABLES TO BE DISPOSED OF, for the unexpired term of [illegible] 21, Wapping, adjoining the Thames Tunnel.—For particulars, apply on the Premises, between the hours of Nine and Three o'clock.

BEAUTIFUL VILLAS, delightfully situated, with splendid views, in the Lawrie park. TO BE LET. They are fitted up with every modern convenience, are well drained, and within a few minutes' walk of the Sydenham Railway Station.—Apply to Mr. W. WEST, Rock Cottage, Sydenham.

WANTED to PURCHASE, a BUILDING SITE or PREMISES in London, west of Temple bar (either freehold or long leasehold), on or near a leading thoroughfare in a central situation, suitable for a charitable institution.—Letters (post paid) stating full particulars, to be addressed to Mr. E. HOULD, 3, Craig's-court, Charing-cross.

For cash, at EDWARD PRIOR'S Oil and Colour Warehouse, 4, Coleshill street, Pimlico.—Every article for the trade at the lowest price.

TO PAINTERS, BUILDERS, &c.—LIVETT, FRANK, and SON, No. 14, Borough, London-bridge, opposite the Brighton and South-Eastern Railway Stations, quote their present prices for cash:—Linseed-oil, 2s. 10d.; boiled, 2s. 9d.; turpentine, 2s. 8d.; oak varnish, 7s. 6d. per gallon; genuine white lead, 23s.; seconds, ditto 21s.; best tawn glue, 45s. per cwt.; colours, brushes, &c. equally low.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 8s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c. — A considerable reduction has taken place in the prices of French polish, white and brown hard spirit varnishes, spirit lackers, and finishing spirit. The present price is for brown 6s. 6d. per gallon; white French polish, 10s. per gallon; white shellac, 1s. 8d. per lb.; gums, shellacs, and acid at the lowest prices. A net cash list forwarded on application to JAMES SALTER, 87, Leather-lane; and 14 and 15, Dorrington-street, Holborn, London.

JOHN HARDMAN and CO. BIRMINGHAM, Manufacturers of Mediæval, Church, and Domestic Furniture, Monumental Brasses, and Stained Glass. Decorations of all kinds executed.

Metal Works..... 168, Great Charles-street.
Stained Glass Works..... 45, Newhall-hill
London Offices..... 12, New Oxford street.
Agent—Mr. STEPHEN THOMPSON.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c.—The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers of every description, may be supplied with any quantity by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on hire or hire and purchase. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

IMPORTANT to ENGINEERS, MILLOWNERS, &c. — NORTH WOOLWICH ELASTIC STEAM-PACKING (Canvas and India Rubber), at 1s. 4½d. per pound (Rings 3d per lb. extra), supplied to her Majesty's dockyards. CAUTION—None genuine unless stamped, thus—S. W. SILVER and CO.—Works, North Woolwich.

"Commercial Mills, Cornbrook, Manchester, Oct. 6, 1854.
"GENTLEMEN,—We have been using almost exclusively, for the last three years, your Packing for sealing the covers and steam and water joints, previous to which time we tried all the sorts which came under our notice, but yours we consider decidedly the best and most economical.—We are, yours respectfully,
"JOSHUA SCHOFIELD and SONS."
"King and Queen Iron Works, Rotherhithe.
"London, Nov. 11, 1854.
"GENTLEMEN,—We have tried your Patent Packing for some time in our steam-engines, and also in steam-pipe joints, and find it efficient and economical, and to be much superior to the ordinary hemp packing. It is especially serviceable in the slide valve.—Yours truly,
"HOWARD RAVENHILL and CO."
"Iron Works, Deptford, Jan. 30, 1856.
"I have pleasure in stating that the Packing of Messrs. S. W. Silver and Co. has been in use in the various parts of the engines on board the steam-ships of the company, and given every satisfaction.
"J. BYAROMORE, Engineer
"General Steam Navigation Company."

Copies of further testimonials forwarded on application to S. W. SILVER and CO. Nos. 3 and 4, Bishopsgate-street Within, opposite the London Tavern.

49 Great Marlborough-street.

MESSRS. DESACHY and CO. of Paris, invite the attention of Architects, Artists, Builders, and Patrons of the Fine Arts, to their COLLECTION of ANTIQUE STATUES from the various Museums of Europe. Reductions from the Antique by Colins, in plaster and bronze; architectural ornaments and decorations in every style. Messrs. DESACHY are also prepared to furnish designs, give estimates, and to enter into contracts for executing works of decorat on in plaster, cement, carton pierre, and other materials.

PUMPS and STEAM-ENGINES to BE SOLD.—A Set of Three 5-inch Pumps, with crank shaft, connecting rods, and rising main, suitable for an artesian well; also a Pair of 30 Centrifugal Pumps, lately used at Battersea-bridge; and Twelve Steam-Engines, from 1 to 20 horse-power; and a powerful Hydraulic Press.—Apply to D. W. ASH, 187, Southwark bridge-road, Swington-causeway, where the above may be seen.

TO BUILDERS, CONTRACTORS, AND OTHERS.
FOR SALE, a Variety of PLANT and MATERIALS, including one 9-inch powerful double-action Iron Lift-pump; two 6-inch and several Wood-pumps, all nearly new; a large quantity of Drain-pipes, Bends, and Junctions; twenty Casks of Blue Lias Lime; ten loads of Dantzic Timber, in lengths from 30 to 60 feet; a lot of granite Kerb; a powerful double-purchase Crab; about half a ton of Nails, and four builder's Carts.—Apply at 36, Bermondsey New-road.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

WARNER'S PATENT VIBRATING STANDARD PUMPS.—For IRON PUMPS, for the use of farms, cottages, manure-tanks, and wells of a depth not exceeding 30 feet.

Diameter Length of Barrel.	Barrel.		£ s. d.
2½ in. short	1 ft. 7 in.	Fitted for lead,	1 10 0
2½ " long	3 "	gutta percha	1 14 0
3 " ditto	3 "	or cast iron	2 8 0
3½ " ditto	3 "	Banned pipe	2 12 0
4 " ditto	3 "	as required,	3 3 0
2½ " short,	with 15 feet of lead pipe attached, ready for fixing		2 14 0
2½ in. long ditto	ditto		2 18 0

The short-barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of coppers and sinks in washhouses with soft water from underground tanks, or in hot, forcing, and plant houses; they may be fixed, when desired, under the stage.—May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. — Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

11 George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also BLUE LIAS and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Steel-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 89, Old Broad-street, London; to Mr. MOMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKES.

Agents in London, Messrs. GEORGE POTTER and CO. Limemerchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 15, North-wharf-road, Paddington.

PORTLAND and BATH CEMENTS. TATHAM and CO. 14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT. Glazed Stoneware Sewage Pipes. Brick, Lime, and Cement Merchants, TATHAM and CO. 14, South Wharf, Paddington.

PARIAN CEMENT, reduced to 3s. per bushel, from 1st inst. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 8.9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non-absorbent). STUCCO CEMENT. STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road, Office, 4, George yard, Lombard-street.

16, South Wharf, Paddington, June 1st, 1856.

NOTICE.

GENUINE BLUE LIAS LIME.—J. D. BLYTH (late senior partner of the firm of Blyth Brothers, Plaster Works, Baldwin's-place, Gray's-Inn lane,) begs to inform his friends and the trade, that he has made arrangements with Mr. CHARLES NELSON, of Warwick, for the entire MANAGEMENT of his BUSINESS in London, in reference to the Sale of his Lump and Ground Blue Lias Lime, Portland and Lias Cements. J. D. B. trusts, that by prompt personal attention to all orders he may be favoured with, to meet a continuance of the patronage hitherto so liberally received by the late firm. Contracts to any amount can be undertaken, and a regular supply guaranteed.—Prices and terms forwarded to all parts of England and the metropolis.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead, whilst the consumption of material is less than for one coat. It dries very fast and hard.

HUBBUCK'S STONE COLOUR BODY PAINT the same as the former, at three-fourths the price.

HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for iron Ships and iron exposed to salt water; neither bilge water, nor noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages, stamped, Hubbuck, London, Patent; and when so marked the quality is guaranteed.

HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Tins or coated with this Enamel is not attacked by the worm neither do barnacles attach to it.

Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.

OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT. PLASTER of PARIS

Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs, Warehouse, No. 1, Wharf, Paddington-basin.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime Cement. Portland, Bath, and Lias Cement. Works, at Harbury, Stockton, and Willmcote.—Office, at Warwick.

CHARLES RICHARDSON, 3 & 5, SOUTH-WHARF, PADDINGTON BASIN. COWLEY AND KENT BRICKS, PORTLAND, ROMAN, AND OTHER CEMENTS, FAMWORTH GLAZED SEWAGE PIPES BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 5, South Wharf, Paddington.

NOTICE.

CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.

All applications for prices and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

PLASTER of PARIS manufactured by T. P. BLYTH, Baldwin's-place, Gray's-inn-lane, Holborn. The trade and shippers supplied on advantageous terms. Roman and Keene's Cement, Tiles, Plasterers' Hair, Fan and Plain Tiles, Fire Goods, &c.

THE BEST HERTFORDSHIRE MALM SECONDS; THE BEST WHITE SUFFOLK and RED FACINGS: WHITE SUFFOLK PERFORATED BRICKS; DEEP-RED RUBBING BRICKS. Also COWLEY and KENT STOCKS, in any quantities. J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY (Within a short distance of the five bridges). THE BEST MALM CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity. Also, STOCKS, of FIRST QUALITY. J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for asphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and bare lime is packed in hogsheads, casks, jars, &c. for exportation.

General Office—No. 12, GEORGE-YARD, LOMBARD-STREET.

Letters addressed to Grays Essex, will meet with immediate attention.

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane, Dulwich. Price for good stock bricks, 25s. per thousand on the field, for cash.—Application to be made to the Foreman, A. BANHAM, at the Works.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BRICKS.—Excellent hard-burnt RED BRICKS, of good colour and shape, suitable for facing or other purposes; also Malms, good Stocks, and a quantity of Grizzels and Place, at LOW PRICES. Agricultural draining Tiles, from 1½ inch to 6 inches in the bore, and Arch Bricks suitable for sewerage. The whole of the above may be inspected in large quantities on the ground, at the Brentwood Railway Brick and Tile Works and Wharf, Brentwood, Essex, adjoining the goods station of the Eastern Counties Railway Company, where they will be loaded into the trucks for any station on the line.—Address, Mr. LEVETT, Brentwood, Essex.

FIRE-BRICKS, LUMPS, TILES, &c.—FURNACE-BUILDERS, GAS COMPANIES, and CONSUMERS of these Goods generally, can be SUPPLIED with every description from our Wharf here, on the most advantageous terms. TRAQUAIR and CO. 9, Bankside, Southwark.

ROUPELL-PARK BRICKFIELDS, LOWER NORWOOD, SURREY. Entrance, Norwood end, Palace-road. — BRICKS of the first class. Red Kiln Bricks Cutters, Dressings, Facings, and Paviors, Clamped ditto, Yellow, and Pale, Seconds, Paviors and Pickings, Washed Stocks, Stocks, and Place.—Apply to TEULMAN and CO. Norwood Lodge, Palace-road, Roupell park, Lower Norwood, Surrey.

CHEAP WHITE BRICKS, for FACING HOUSES (Beard's Patent).—These bricks are of excellent make and colour, and imperishable from frost, and do not vegetate or become green.—For particulars, address, Patent Brick Works, Rugby, Warwickshire.

BLUE BRICKS and TILES, of superior quality, and in great variety of mould, for ornamental work, paving, coping, and general purposes.—GEO. C. HYLAND, Hailstone Wharf, Crescent Birmingham

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury New-park, would be willing to enter into arrangements with builders and others for supplying first-class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Dell's Farm, Stoke Newington Green.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for the bearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented

HENRY COUNT, Sec.
37, King William Street, City.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,

For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.

SOLE AGENT,

J. B. LAWES, 1, Adelaide-place, London-bridge.

This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the place of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.

Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 2d. per foot. This charge to include tiles (delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WILARD, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REVERSE OF THE MEDAL," page 261, of the Great Exhibition, rank the Manufactories known so long as "The Tileries." Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c. — J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 22s. 6d. per 1,000; floor bricks and 6-inch pavings, at 37s. 6d. per 1,000; 8-inch pavings, at 57s. 6d. per 1,000; plain tiles, at 32s. per 1,000, delivered. Cash prices.—Delivered on trucks in London or Eastern Counties Railway.

H. and R. HAYWOOD, Brownhills Blue Metallic Tileries, near Burslem, Staffordshire; London Depôt, 15, South Wharf, Paddington, Manufacturers of Improved Plain and Ornamental Roofing, Ridge and Flooring Tiles, for Churches, &c.; also Metallic Plain and Socket Sewerage Pipes, &c. adapted for sanitary and Railway purposes. They are extensively used on the London and North Western, Great Western, Trent Valley, North Staffordshire, and other Lines of Rail, and highly approved. Warranted imperishable, and to resist all acids and exhalations.

*** A FIRST-CLASS MEDAL was awarded to H. and R. HAYWOOD, by the Jury of the GREAT EXHIBITION.

WILLIAM GILBERT, Manufacturer of all kinds and colours of Tiles, Quarries, Drain-pipes, Moulded Bricks, Brackets, Vases, Chimney-pots, Stoneware Glazed Sewerage Pipes, Ornamental Quoin Blocks, &c. Tividale, Staffordshire.

HOGG'S GARDEN EDGE TILES.—The attention of persons engaged in laying out Gardens for Public Institutions is solicited to these Tiles, as an elegant, cheap, and permanent substitute for box edging. In colour they resemble Dutch clinker, are very hard, easily laid down, afford a shelter for vermin, and act as a drain to the paths. Price 13s. per 100, or about 4d. per yard run.—Full particulars on application to R. BLACKETT, Witham, Essex.

PAINT, certified by the Government Engineers and Contractors to be the CHEAPEST and BEST ever discovered for wood and iron, price 35s. per cwt.—Apply to the London Anti Oxyde Paint Company, D. WALKER, Secretary, 29, New Bridge-street, Blackfriars.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 62lbs. of Wolston's Torbay Iron-Paints will effectually cover as much surface as 112lbs. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Slapping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all graining purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

DOULTON'S NEW ENAMELLED CLOSET-PAN, REGISTERED,

AND

LAMBERT'S PATENT HIGH-PRESSURE VALVE-COCK,

With Handle, Lever, and Weight, ready for fixing,

Making the most COMPLETE, DURABLE, and EFFICIENT APPARATUS, as well as by far the CHEAPEST yet manufactured.

WILLIAM NORTHEN'S

WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET-PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—Closet and Trap, 5s. 6d.; Closet, 3s. 6d.; Trap, 2s.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having for months past supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dock-yard, Her Majesty's Commissioners of Works, &c. and in all instances parties being thereby expressing themselves satisfied therewith, take this as a fair test of the quality of the articles supplied by them; and as they now feel the works established as Potters, beg to offer their wares to Contractors, the Trade, &c. of a first-rate quality in manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

FACING FOR BUILDINGS COMPANY.

TAYLOR'S PATENT.

TO ALL WHO CONTEMPLATE BUILDING, and desire, without additional expense, to have their residences or other erections perfectly resistant to wet, and the vicissitudes of a changeable climate which has not been hitherto attainable except by great thickness of the external walls, or the use of cement, requiring the constant expense of painting, this method, which has been sufficiently tested during the past few years in numerous buildings, is now with confidence offered as accomplishing this; at the same time it strengthens the ordinary construction, and is not more expensive than ordinary bricks, pointed.

THE FACING is manufactured of the superior clays of SUFFOLK, NORFOLK, SOUTHAMPTON, DORSETSHIRE, AYLESFORD, &c.; and is made of a form which admits of being perfectly burnt, it is almost indestructible. It requires dry upon the building that it never regrates, is so portable, that it can be sent a great distance at little cost of carriage, and can be used with the ordinary bricks of any quality, and by the ordinary workmen. It adds greatly to the appearance of the building, and admits of a great choice of colour, so as to suit the taste of the architect or others.

IT IS ALSO MANUFACTURED OF THE DIFFERENT BUILDING STONES, with which walls can now be faced without the necessity of iron ties and cramps, binding stones, or any artificial aid; and all injury to the stone ashlar, from being weighted by the settlement of the more mortar joints of the inside brickwork, is avoided.

THE APPLICATION OF STONE for this purpose is now by this method so facilitated and reduced in price, as will make it applicable as a general material for facing buildings, producing that effect so justly admired in Paris, Bath, and other stone localities, where the expense of carriage and other causes have so much combined.

Its application has upon this plan been found very desirable in the inside of churches and other buildings, and in dining-halls, cobbles, staircases, and other parts of private residences, instead of plastering; it is quickly dry, and all necessity for colouring and repairs is avoided.

A list of cases may be obtained by application, either personally or by letter, to JOHN TAYLOR, ARCHITECT AND PATENTEE, AT THE OFFICES OF THE COMPANY, No. 40, KING-STREET, CORNER OF CHEAPSIDE, OR SPRING-GROVE, HOUNSLOW, where the church can be inspected that has been faced with Bath stone, internally and externally, in this manner; also the other buildings and residences, and elsewhere: and the residents will speak as to the advantages and comfort of the plan.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 43 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor of heat.

INDORous FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

BELGIAN WINDOW-GLASS, Wholesale and for Exportation.—LAROCHE FUGNI, and CO. Manufacturers and Importers of Belgian, Plate, Sheet, Crystal Coloured, and every other description and foreign Glass, respectfully inform merchants, dealers, &c. that they have now on sale a large supply of every kind of window glass suitable for the English market. These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FOR ABSOLUTE SALE.—THE EXTENSIVE SHIP-BUILDING ESTABLISHMENT AND IRON WORKS OF MR. C. J. MARE, AT BLACKWALL.

MESSRS. FULLER and HORSEY, in conjunction with Messrs. PULLEN and SON, are instructed by the Assignees with the consent of the Mortgagees, to OFFER for SALE by AUCTION, at the MART, on WEDNESDAY, the 30th of JULY (unless an acceptable offer be previously made by private contract, in ONE LOT, the extensive SHIP BUILDING ESTABLISHMENT and IRON WORKS of Mr. C. J. Mare; together with the whole of the valuable fixed PLANT and MACHINERY.

These works, which together occupy a site of 14a. 2r. 30p. are situated at Blackwall, on the opposite banks of Bow-creek, its junction with the Thames, a portion of the works having a direct frontage near the Thames. The land fronts and abuts on Trinity-road and Orchard place, Blackwall, and on the North Woolwich Railway, near the junction to the Victoria dock line, by means of which, and the North London Railway, direct communication with the northern and midland districts is established. The approach from the City is easy and frequent throughout the day, by the Blackwall and North Woolwich Lines, from adjacent termini in Fenchurch-street, by means of which the northern and southern division of the works are reached within half an hour; there is also a ferry across Bow-creek for the facility of communication. The resources of the establishment for the purposes of ship-building, comprising engineering works, are unequalled in the world, and have produced, upwards of 48,000 tons of shipping having been built and launched in the years 1853 and 1854 from the yards, while from the forge and iron works upwards of 17,000 tons of iron have been hammered and rolled within the same period, and from the foundries upwards of 3,000 tons of castings delivered. The high character of the work executed has gained for the firm a world-wide reputation In the ship-building Department, vessels have been built for the English, Turkish, Russian, Spanish, and Sardinian governments, the Honourable East India Company, the Peninsular and Oriental, the Imperial Screw, and the General Steam Navigation Companies, the Dover Mail Packet Company, the South-Western Railway Company, and others, unequalled in size, unsurpassed in speed, and without a failure in any one case. Among others may be mentioned the renowned *Brandon*, of 2,200 tons burthen, the *Peru*, the *Prince*, the *Candia*, the *Holyoke*, the *Argo*, the *Crocus*, the *Golden Fleece*, the *Indiana*, the *Swan*, the *Victor Emanuel*, the *Crimea*, the *Transit*, the *Perseverance*, with many others also yachts for the Emperor of Russia and his Highness the Viceroy of Egypt; and such are the appliances and facilities afforded by existing arrangements, that the rapidity with which the works are carried on is perfectly surprising. The works executed at the forge have been equal in magnitude, including the crank shaft of upwards of 70 tons in weight, and forgings of the largest description for the principal engineers in London, the total weight of hammered iron produced in one year exceeding 1,700 tons. The Engineering Departments have executed a considerable portion of the Britannia Tubular Bridge, upwards of 4,000 tons of wrought-iron bridges for the East-India Railways, the wrought-iron bridges for the North London Railway, the beautiful iron roof for the terminus of the Blackwall Railway, and the portion of the iron work at present completed for the new bridge at Westminster; while the Boilermakers' Department, marine boilers, equal to 4,000-horse power, can be produced annually.

The principal buildings are on the freehold portion of the property, and have been erected in the most substantial manner; they include the hammer and rolling-mills, the foundries, carpenters' workshops, and are fitted with five Nasmyth's hammers of various sizes, the two larger ones having double cylinders and furnaces, thus affording a two-fold capacity; two tilt hammers, three sets of rolling mills for plates and bars, worked by controlling paining and slotting machines, drilling machines, numerous self-acting lathes, several of which are adapted for the heaviest work; smiths' forges, plate, angle, and bulling furnaces; fitters' shops, and other machinery. The whole of the machinery, by the best makers, and with all the modern improvements, a considerable portion new within the last few years. A sea-going boiler-makers' shop, fitted with forges, furnaces, shearing, punching, and drilling machines, steam riveting machine, travelling cranes, &c.; an angle iron shop, with massive shaping plates 24 inches, &c.; and morti-ine engines, worked by a 60-horse power steam-engine. In the ship-yard are twelve slips for building vessels of the largest tonnage, steam kilns, saw pits, mast house, mast building and block-making shops, joiners' and carpenters' shops, engineers' fitting shops, stores of various descriptions, offices, and other buildings. The situation of these works affords the greatest facility for the transit of goods by land or water carriage, as there is a siding on to the North Woolwich Railway, and several wharfs next the water side, with powerful cranes, one of them being a steam crane equal to twenty-five tons. The proximity of the East India and Victoria Docks to this, and of great advantage to the extensive coal trade during the years 1854 and 1855 nearly exceed 17s per ton, while the numerous termini of railways in the neighbourhood, from which a large quantity of steam coals are annually obtainable, together with the vast accumulation of waste iron from the different manufacturing establishments in London, ensure a constant and sufficient supply of scrap iron for the purposes of the mills and forge on the best possible terms. The whole combination of these works, the value of which has been effected within the last fourteen years, has involved an outlay approaching £50,000, expended under the immediate superintendence of their present proprietor, and the formation of an establishment of great extent and capabilities, unrivalled in situation, enjoying the highest reputation for the character of the works performed, possessing facilities for the transaction of business unequalled by any, and containing within itself all the accessories requisite to command a large and lucrative trade. The tenure of the property is partly freehold and partly leasehold.

The works may be viewed till the sale, by cards only, which may be obtained shortly, together with printed particulars, of CHARLES LEE Esq. Official Assignee, Aldermanbury; of Messrs. LAWRANCE, PLEW, and WHITEHORN, Solicitors, 5, Old Jewry-chambers; of Messrs. NEWMAN and EVANS, Solicitors, Wardrobe-place, Doctors'-commons; of Messrs. PULLEN and SON, 80, Fore-street, Cripplegate; and of Messrs FULLER and HORSEY, Billiter-street, London.

TO IRONFOUNDERS, IRON MERCHANTS, AND OTHERS.

MESSRS. FULLER and HORSEY are instructed by the Assignees of R. J. Polehaze to SELL by AUCTION, at the AUCTION MART, Bartholomew-lane, on WEDNESDAY, the 30th of JULY, 1856, at TWELVE o'clock, in lots, without reserve, 350 tons REJECTED SHELLS, from 3½ inches to 6 inches diameter, lying at Woolwich, made from cold blast and Scotch pig iron.—To be viewed in bulk by permission, two days previous to the Sale Catalogues may be had at the Mart; of Messrs. ASHLEY and TEE, Solicitors, 7, Old Jewry; and of Messrs. FULLER and HORSEY, Billiter-street, City.

Highly finished Condensing Steam engine, by Nasmyth.

MESSRS. FULLER and HORSEY are instructed by the First Commissioner of her Majesty's Board of Works to SELL by AUCTION, at ROSE LANE, Stepney, on THURSDAY, the 7th of AUGUST, 1856, at ELEVEN o'clock a highly-finished, direct acting, condensing STEAM-ENGINE, by Nasmyth, with 14-inch cylinder, 3-feet stroke, D slide-valve, throttle-valve, and governors, air-pump and two-feed pumps, with solid gun-metal eccentric, bright wrought-iron crank-shaft, fly-wheel, condenser, and apparatus, made for the House of Parliament.—To be viewed on Wednesday previous to the sale, when catalogues may be had, on the Premises; and of Messrs. FULLER and HORSEY, Billiter-street, City.

FREEHOLD BUILDING LAND, four miles from the City, close to the Forest-gate Station, Stratford, Essex.

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, on MONDAY, JULY 28th, at TWELVE, in fourteen lots (unless an acceptable offer be previously made), TEN ACRES of eligible FREEHOLD BUILDING LAND, situate close to the Forest-gate Station, on the Eastern Counties Railway, near Walthamstow Forest, admirably adapted for the erection of villas and moderate-sized houses. The lots will be so arranged as to carving from 200 feet to 300 feet each to well-made roads.—May be viewed, and printed particulars had at the Eagle and Child, Forest-gate; of D. B. SLADEN, Esq. 2, King's Arms-yard, Moorgate-street; at the Mart; and of Messrs. H. BROWN and T. A. ROBERTS, 22, Throgmorton-street.

FREEHOLD BUILDING LAND.—CARSHALTON, SURREY, near the Railway Station.

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, at the MART, on MONDAY, JULY 28, at TWELVE, in Ten Lots (unless an acceptable offer be previously made), about TWELVE ACRES of FREEHOLD BUILDING LAND, situate within a few minutes' walk of the Carshalton Station, on the Croydon and Epsom Railway, about eleven miles from London. The lots will have frontages varying from 60 feet to 80 feet each, and contain from 1,200 square feet to 2 acres each. The land stands on an eminence, commanding extensive views, is very dry, and desirably situate for first-class residences, being neighbouring to many noblemen's seats. May be viewed, and printed particulars had at the Melbourne Hotel, Carshalton; of D. B. SLADEN, Esq. 2, King's Arms yard, Moorgate-street; at the Mart; and of Messrs H. BROWN and T. A. ROBERTS, 22, Throgmorton-street.

Final Portion of the Valuable Stock of Messrs. Browne and Co. University-street, including Marbles, Bronzes, Mosaics, Chimney-pieces, Scagliola Pedestals, a Stained Glass Window, Architectural Casts, &c.

MESSRS. RUSHWORTH and JARVIS beg to announce that the SALE of the final portion of the valuable STOCK of Messrs. Browne and Co. will take place on WEDNESDAY, the 30th of JULY, and two following days at the GALLERIES, University-street, and will include VASES, STATUES, and GROUPS, in marble and bronze, adapted for gardens and pleasure-grounds; two noble marble busts (from Venice), a quantity of Italian paving-tiles, of mosaic and other design; many very beautiful statuary and richly coloured marble chimney-pieces, designed with great taste, and sculptured by first-rate artists, including two of superb character; fine specimens of scagliola, in pedestals, tazzas, brackets, and chimney-pieces; a collection of valuable architectural casts, from celebrated originals, worthy the attention of builders and architectural pupils; also a variety of objects of taste and utility, being the last portion of this well-known and tastefully-selected assemblage.—May be viewed the day prior to the sale, and catalogues had on the Premises; and at the Offices of Messrs. Rushworth and Jarvis, Saville-row, Regent-street; and 19, Change-alley, Cornhill.

WEYMOUTH.—TO BE SOLD BY AUCTION, BY

MR. MILLEDGE, on WEDNESDAY, the 27th day of AUGUST, 1856, at LUCES ROYAL HOTEL, Weymouth, at THREE o'clock in the afternoon (unless an acceptable offer shall be previously made by private treaty), in the room of the executors of the late William Tutt, Esq. a compact MARINE VILLA RESIDENCE, with garden, hothouses, and greenhouses adjoining, forming a most unique and retired residence, admirably adapted for a small family, and combining the advantages of entire seclusion and privacy in the midst of the varied scenes of this salubrious watering place. The house, which was built five years ago with much taste and regardless of expense, stands in a pleasure-ground of above an acre, elegantly laid out with well-kept lawn, and shrubbery. One of the sitting-rooms opens into a conservatory, about 41 feet by 21, stocked with choice and rare plants. The furniture and plants may be taken at a valuation, at the option of the purchaser. The property adjoins Gloucester Lodge, formerly the residence of George III. and his Court.

At the same time will be Sold, in separate lots, a Dwelling, with spacious store-rooms, used as a gardener's residence, and Sittings in St. Mary Church.

The residence and pleasure-ground are held in fee, the garden for one life, and the dwelling-house, store-rooms, and sittings for terms of years. The property may be viewed by writ on orders only, to be obtained from Messrs. ANSTEY, PHILIPS, and BENNETT, 14, Red Lion-square, London; or Mr. MILLEDGE, Auctioneer, &c. 4, Frederick-place, Weymouth, from whom further particulars may also be obtained.

NORWOOD, SURREY.—Two valuable Freehold Residences, with Pleasure-gardens, and Offices, and Meadow Land in the rear, the whole containing nearly Six Acres, and possessing very great advantages for building purposes.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to offer for SALE, at the MART, on FRIDAY, AUGUST 8, at TWELVE (unless previously sold by private contract), a very important and valuable FREEHOLD ESTATE, delightfully situate in Thurlow place, fronting the high road, at Lower Norwood, about 5½ miles from the City, near to Tulse-hill, and within five minutes' walk of a station on the West End and Crystal Palace Railway; comprising a detached cottage residence, with greenhouse, stabling, and offices adjoining, let to a respectable yearly tenant, at a low rental of 30l per annum, and an extra eligible meadow in the rear, abutting on the New Palace-road, running through Mr. Rendell's estate to Upper Tulse-hill, in the immediate vicinity of great improvement and extensive building operations; the whole containing nearly six acres. The estate possesses a frontage of about 200 feet to the high road; another frontage of 400 feet to the road leading to Streatham; extends in extreme length from north to south 800 feet; and presents to capitalists and freehold land and building societies an unusually eligible property for a first-class building speculation—Particulars may be had of CHARLES CHAMPION, Esq. Solicitor, 11 Austin-friars; at the Mart; of Messrs. NORTON, HOGGART, and TRIST, 62, Old Broad-street, Royal Exchange.

IN CHANCERY. "Edwards v. Crichton" — Leasehold, near Blackheath, Kent.—Valuable Freehold Estate with possession.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to offer for SALE, at the MART, on MONDAY, JULY 28, at TWELVE in one lot, pursuant to a decree of order of the High Court of Chancery, with the approbation of His Honour the Master of the Rolls, to whose branch of the High Court of Chancery this cause is attached, a valuable FREEHOLD ESTATE (land-tax redeemed), pleasantly situate in the Lee road, close to Lee Church, only ten minutes' walk from the Lewisham station, one mile from the Blackheath station on the North Kent Railway, and within half an hour's ride of the metropolis. It consists of a very comfortable and compact detached residence, known as Lee Lodge, standing upon a lawn, and approached by a carriage drive, containing six bedrooms, dining and drawing rooms, library, morning room opening into a conservatory, entrance hall, store-room, and other good domestic offices and cellarage, and every accommodation for a moderate-sized family, pleasure and kitchen gardens, stabling for four horses, and coach-house within a few minutes' walk of the Carshalton Station, on the Croydon and Epsom Railway, about eleven miles from London. The lots will have frontages varying from 60 feet to 80 feet each, and contain from 1,200 square feet to 2 acres each. The land stands on an eminence, commanding extensive views, is very dry, and desirably situate for first-class residences, being neighbouring to many noblemen's seats. May be viewed, and printed particulars had at the Melbourne Hotel, Carshalton; of D. B. SLADEN, Esq. 2, King's Arms yard, Moorgate-street; at the Mart; and of Messrs H. BROWN and T. A. ROBERTS, 22, Throgmorton-street.

HOUNSLOW, MIDDLESEX.—Valuable Freehold Orchard Land and Building Land, containing together about nine acres, having an important frontage of 700 feet, and giving votes for the county.

MESSRS. NORTON, HOGGART, and TRIST have received instructions from the Executors to OFFER for SALE, at the MART, on MONDAY, JULY 28, at TWELVE, in two lots, the first being a valuable FREEHOLD PROPERTIES, —A piece of freehold building and orchard ground, containing about six acres, slightly situate on the Wellington-road, Hounslow, Middlesex, only one mile from the Hounslow station, on the Windsor branch of the South-Western Railway. It possesses an important frontage of 700 feet to the road, and from its contiguity to the railway, and the increasing demand for house property in the neighbourhood, presents great advantages for building purposes. In the occupation of Mr. Gardner, upon lease, at 30l. per annum, but a satisfactory arrangement may be made for possession to be given, if required. Also, a valuable orchard near the above, containing about three acres, let to Mr. Chapman, upon lease, at a very low rental of 15l. per annum.—Particulars may be had of Messrs. BRACKENRIDGE and SON, Solicitors, 16, Bartlett's-buildings, Holborn; at the Inns at Brentford, Isleworth, and Hounslow; at the Mart; and of Messrs. NORTON, HOGGART, and TRIST, 62, Old Broad-street, Royal Exchange.

NORWOOD, SURREY. To Capitalists, Speculators, and Builders.

MR. MOXON will SELL, at the AUCTION MART, on TUESDAY, JULY 29, a very desirable FREEHOLD ESTATE, comprising a family residence, known as Cambrian House, with gardens, orchard, and several paddocks, in all about eight acres, situate on a beautiful elevated spot, within a short distance of Norwood Church, a mile from the Crystal Palace, and close to an intended station on the New Road and Crystal Palace Railway. The land has important double frontages, and contains very superior brick earth.—Particulars and plans are now ready.—3, St. Martin's-place, Trafalgar-square.

COPTHORNE-COMMON, near the Three Bridges Station, on the London and Brighton Railway.

MR. MOXON will SELL, at the AUCTION MART, on TUESDAY, JULY 29th, by direction of the Mortgagee, SIX ACRES of valuable FREEHOLD LAND, eligible for building, three miles from the Three Bridges Station, and two from the Rowland Station on the East Grinstead Railway.—Particulars of MATHEW and SALMON, 30, Great George-street; and of the Auctioneer, 3, St. Martin's-place.

LEASEHOLD ESTATES.

MR. PEAKE is ordered to SELL by AUCTION, at the MART, on WEDNESDAY, JULY 30, 1856, at TWELVE o'clock, in lots, several LEASEHOLD ESTATES, situate in Southwark and Bermondsey, producing in the aggregate 662l 10s per annum; held at low ground rents.—Particulars obtained of Messrs SYMES, TEESDALE, and SANDILANDS, Solicitors, 33, Fenchurch-street; Messrs. WILLOUGHBY, Cox, and LORD, Solicitors, 14, Cliff's-inn; F. WILLMOTT, Esq. Solicitor, High-street, Borough; Messrs. JONES and WILDEN, Solicitors, 8, Lawrence Pountney-hill; Mr. SUMNER, Solicitor, 22, Harp-lane; at the Auction Mart; and at Mr. PEAKE'S Offices, 44, Tooley-street, Southwark.

BARNSBURY.—To SMALL CAPITALISTS, BUILDERS, and OTHERS.—PEREMPTORY SALE.

MESSRS. KENNEDY and BONNY will SELL by AUCTION, at the Cock Tavern, Highbury, adjoining the Railway Station, on THURSDAY, JULY 31, 1856, at TWO for THREE o'clock, a small leasehold DWELLING HOUSE, containing five rooms, complete except painting and papering, also FIVE WOOD CASES of night soil, together with the Piece of Land in front of the same. The whole held under a lease for thirty-four years and three quarters (less twenty-one days), from Lady-day, 1854, at a ground-rent of 10l. per annum for each house, viz.: 6, 7, 8, and 10, Albion-terrace, Upper Barnsbury-street, Islington, near the Albion Tavern. A very eligible situation for a builder. The property may be seen at any time until the day of sale, at the Office of Mr. MCMILAN, Solicitor, 5, Barnard's-inn, Holborn. Particulars and conditions of Sale, may be had of Mr. MCMILAN, as above; at the Place of Sale; and at the Auctioneers' Offices Camberwell.

BUILDING MATERIALS, WESTMINSTER ROAD, LAMBETH.

MESSRS. EVERSFIELD and HORNE have received instructions to SELL by AUCTION, on the PREMISES, on the Westminster road, Lambeth, nearly opposite the Orphan Asylum, on TUESDAY, JULY 29, at ELEVEN for TWELVE, the valuable MATERIALS and FITTINGS of a PAIR of the usual description. Also a quantity of excellent DOUBLE DOORS, SASHES, and other WOOD FITTINGS.—May be viewed one day previous, and catalogues had on the Premises; and of the Auctioneers, 40, Parliament-street, Westminster, or Coal Exchange.

CORNHILL.—The VALUABLE MATERIALS of the George and Vulture Tavern, and Houses adjoining.

PULLEN and SON are instructed to SELL by AUCTION, on the Premises, on WEDNESDAY, AUGUST 6th, at TWELVE, in Lots the VALUABLE BUILDING MATERIALS of the George and Vulture Tavern, and several Houses adjoining, in St. Michael's-alley and Bell-yard, in the Parish of St. Michael, Cornhill, comprising about 300,000 sound bricks, several rows of lead, plain and pan tiles, and slates; oak and fir timber in roofs and floors, glazed sashes, doors, and fittings of wainscotting, marble chimney-pieces, sound flooring boards, shop fronts, iron railings, large iron doors, stoves, ranges, stone paving, &c. May be viewed the day previous. Catalogues may be had on the Premises; at Grade's-court Chaning Cross; and of PULLEN and SON, 80, Fore-street, Cripplegate.

MARK-LANE.—BUILDING MATERIALS of THREE LARGE HOUSES and WAREHOUSES.

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on THURSDAY JULY 31st, at TWELVE, in lots, all the valuable BUILDING MATERIALS of the three large houses and warehouses, at the corner of Mark-lane and Tower-street, being Nos. 42 and 43, Mark-lane, and 69, Tower-street, comprising good sound brickwork, a large quantity of nearly new slates and tiles, including countess and oak and fir timber in roofs and floors, several tons of lead in flats, gutters, cisterns, and pipes, glazed sashes, doors, partitions, sound flooring and lining boards, and prime deal and pine shop front, with lofty doors, iron columns, stone paving, counters, and fittings, erection of large baker's oven, stoves, and useful fixtures and effects. May be viewed, and catalogues had of RICHARD BELL, Esq. Architect, 17, Gracechurch-street; and of PULLEN and SON, 80, Fore-street, Cripplegate.

PEMBROKESHIRE.—PEMBROKE DOCK and NEYLAND.—Important, Varied and Extensive Sales.

GEORGE N. HASSELL begs most respectfully to inform Railway Contractors, Colliery Proprietors, and Operative Agriculturists, that he has been instructed by Messrs. F. Conder and Co. whose contracts on the South Wales Railway are nearly finished, to SELL by AUCTION, at the BATTERY, Pembroke-dock, on MONDAY, AUGUST 4, 1856, at TWO p.m. the whole of the MATERIALS at that place; and on TUESDAY, AUGUST 5, 1856 at the TERMINUS of the South Wales Railway at Neyland, the whole of the MATERIAL at that place, at ELEVEN o'clock in the forenoon, consisting of about 150 Tons of RAILS and T-RAILS, about 150 BROAD and NARROW GAUGE WAGONS and TRUCKS, and all the general routine of articles, contained in an extensive Railway Outfit, to which is added, 6 serviceable cart horses.—Refreshments for Tuesday's Sale, will be on the table at Ha'post Ten o'clock, at the Railway Hotel, Neyland.—Haverford West, July 21, 1856.

DUMPY and LEVEL STAFF WANTED. Any person having a good and perfect SECOND-HAND DUMPY LEVEL and STAFF to DISPOSE OF, may hear of a purchaser, by forwarding description and lowest price, to X. Y. Z. Mr. Brown's, Stationer, 195, Strand.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brothers) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, July 26, 1856.

EXHIBITION of ART-TREASURES of the UNITED KINGDOM, to be OPENED at MANCHESTER in MAY, 1857.

PATRONS.
Her Majesty the QUEEN.
His Royal Highness Prince ALBERT.
PRESIDENT.
The Earl of ELLESMERE, K.G. Lord-lieutenant of Lancashire.
EXECUTIVE COMMITTEE.
Thomas Fairbairn, esq. Chairman.

The Mayor of Manchester.	Joseph Heron, esq.
Thomas Ashton, esq.	Thomas Potter, esq.
William Entwisle, esq.	Sigismund J. Stern, esq.

GENERAL COMMISSIONER.—John C. Deane, esq.

The object of the proposed exhibition is to secure a collection of the choicest and most instructive works which illustrate the Ancient and Modern Schools of Art Oil Paintings, Water-colour Drawings, Enamels, Sculpture in Marble and Stone, Carvings in Ivory and Wood, Bronzes, Coins, and Works of Artistic Excellence, in Gold, Silver, Steel, or Iron, in Glass and Earthenware, Terra Cotta and Plaster, will necessarily constitute the main features of the Exhibition.

The Executive Committee respectfully invite communications from possessors of Art Treasures who may feel interested in the success of a scheme which aims at the worthy illustration of the art-wealth of the United Kingdom.

From the known catalogues of the resources of the country, thus extended, the Committee propose, with the assistance of Officers of acknowledged competency, to make such a selection as will enable them to place before the world an Art Exhibition not less valuable to the student from its chronological arrangement, than attractive to the public from its beauty and completeness.

The committee do not desire to elicit from manufacturers specimens of their production, either for competition or sale.

The Exhibition building will be erected on a site adjoining the Botanic Gardens, distant about two miles from the centre of the City, and quite free from atmospheric impurities. Such consideration has been given to the mode of lighting the hall for the display of pictures and sculpture, and every precaution will be taken to protect the works of art from injury.

In all cases where desired by the owners, the Committee will insure the art treasures contributed.

There will be railway communication from all parts of England, direct to the Exhibition Building, and contributions will be received and returned to their owners, free of expense.

Communications may be addressed to the Secretary, 70, Mosley-street, Manchester. By order of the Executive Committee,

CHARLES H. MINCHIN, Secretary.

Offices of the Exhibition, 100, Mosley-street, Manchester.

COMPETITIONS.

PRIZE ESSAY on CANALS.—A PREMIUM of £61 will be given by the Committee of the Canal Association to the Author of the BEST ESSAY on the PRESENT CONDITION and FUTURE PROSPECTS of CANALS and CANAL CONVEYANCE; with Suggestions as to the Points to which attention, with a view to improvement, should be principally directed. The Essay must be sent in on or before the 31st DECEMBER, 1856, to the Honorary Secretary, from whom further particulars may be had on application.

THOMAS WILSON, Hon. Sec.

Aire and Calder Navigation Office, Leeds, 1st July, 1856.

TO ARCHITECTS.—Weston-Super-Mare Improvement and Market Act, 1842 and 1851.—The Commissioners acting under and by virtue of the above Acts of Parliament, are prepared to receive PLANS and SPECIFICATIONS for the ERECTION of a new TOWN-HALL over their Market-place, the cost of such building not to exceed £2,000. A plan of the ground, if required, may be obtained by applicants at the Clerk. The drawing of the plan approved by the Commissioners will receive a premium of fifteen guineas, such plan to be the property of the said Commissioners. Plans must be sent, free of carriage, to the Office of the Clerk, No. 5, South Parade, Weston-super-Mare, aforesaid, on or before the 8th day of SEPTEMBER next. WILLIAM SMITH, Clerk to the Commissioners.

Dated, Weston-super-Mare, July 14th, 1856.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London district hereby gives Notice, that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall mall, on or before the 6th of AUGUST next, for BUILDING a STABLE and SUPPLYING a TANK to contain 10,000 gallons of water, at the Wellington Barracks, St. James's park. Printed schedules and forms of Tender may be obtained at the Royal Engineers' Office, 11, James-street, Pimlico, between the hours of TEN and THREE o'clock, from the 23rd of JULY to the 5th of AUGUST next inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineers' Office, 11, James-street, Pimlico,
16th July, 1856.

NOTICE to BUILDERS and CONTRACTORS.—WAR DEPARTMENT WORKS.—Sealed TENDERS for the ERECTION of a FORT and BARRACK at Mount Tourville, Alderney, will be received by the Director-General of Contracts, War Department, Pall-mall, London, on or before the 30th day of SEPTEMBER next, after which date no Tender will be received. Detailed drawings may be seen, and every requisite information obtained, at the Royal Engineer's Office, Alderney, from the 7th to the 21st of AUGUST next and at the Office of the Inspector General of Fortifications, War Department, Pall-mall, from the 1st to the 21st of SEPTEMBER next. The terms of contract, specification for the works, and forms of Tender, can be procured at the Office of the Director-General of Contracts, War Department, Pall-mall, London, and at the Royal Engineer Offices, at Guernsey and Alderney. Each Tender forwarded must be attached to a copy of the terms of contract and specification. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders. Tenders for the above work to be addressed to "The Director-General of Contracts," War Department, Pall mall, London, and endorsed "Tender for Erecting a Fort and Barrack at Mount Tourville, Alderney."

NOTICE to BUILDERS. — ORDNANCE CONTRACT.—The principal Officers of Her Majesty's War Department hereby give Notice, that they will receive PROPOSALS for the following CONTRACT, viz.:—For the several Works proposed in the ERECTION of ADDITIONAL BUILDINGS, together with other Alterations and Improvements in the BARRACKS at BEGGAR'S BUSH, DUBLIN. Persons desirous of Tendering for the same, will receive every information on application at the District Commanding Royal Engineer's Office, Portobello Castle-yard, Dublin, and may obtain specifications with the terms of Contract. The Soldiers Quarters, Cookhouses, and Hospital to be completed on or before the 31st MARCH, 1857, and the remainder of the works on or before the 31st AUGUST, 1857.—The letters of Tender with specifications to be sealed, and transmitted under cover to "The Director General of Contracts, War Department, Pall-mall, London," so as to be received on or before the 6th day of AUGUST, 1856, and to be marked on the outside, "Tender for Works at Beggar's Bush Barracks, Dublin."

Commanding Royal Engineer's Office, Dublin,
July 17, 1856.

NOTICE to BUILDERS and CONTRACTORS.—ROYAL ENGINEER CONTRACT.—The Commanding Royal Engineer of the Woolwich District hereby gives Notice, that sealed TENDERS, in one sum, will be received at the Office of the Director-General of Contracts, Pall mall, London, on the 26th of AUGUST, 1856, from such persons as may be desirous of CONTRACTING for the ERECTION, at Shoeburyness, of a HOSPITAL, with the necessary outbuildings, enclosure wall, &c., of quarters for the hospital servants and four staff sergeants, and of a quarter for the Assistant Superintendent of Experiments; also for an extension of the present cookhouse and the erection, contiguous thereto, of a store and office.—The specification and drawings may be seen, on application at the Royal Engineer Office, Grand Depôt, Woolwich, between the hours of TEN and FOUR, up to the 6th AUGUST, 1856, inclusive. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Grand Depôt, Woolwich,
15th July, 1856.

ROYAL ENGINEERS' CONTRACTS.—WAR DEPARTMENT.—The War Department being about to enter into a CONTRACT for ALTERATIONS and ADDITIONS to certain portions of the ROYAL ARTILLERY BARRACKS, at Woolwich, such persons as may be desirous of Tendering for the same may receive information relative thereto by applying to the District Clerk of Works, at the Royal Engineers' Office, Grand Depôt, Woolwich, between the hours of TEN and FOUR, up to the 6th AUGUST, 1856, inclusive. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders. Sealed Tenders, addressed to the undersigned, will be received at the Office of the Director-General of Contracts, Pall mall, London, on the 26th of AUGUST, 1856.

Royal Engineer Office, Grand Depôt, Woolwich,
15th July, 1856.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Office of the Director-General of Contracts, War Department, Pall-mall, London, on or before the 9th SEPTEMBER, 1856, from such persons as may be desirous of CONTRACTING with the War Department for BUILDING NEW BARRACKS to accommodate 39 officers, and 1,000 non-commissioned officers and privates, at Chatham, in the County of Kent. The buildings to comprise commanding officers' quarters, officers' quarters, quarters for staff-sergeants and married soldiers, laundry, workshops and stores, soldiers' barracks, guard house, canteen, stable for officers' horses, coal-yard, engine-house, &c.; sinking wells, constructing tanks, drains, sewers, enclosure walls, and iron railings; planting trees, &c. &c. Plans and Specifications, with forms of Tender, may be seen, and all other information obtained at the Royal Engineer Office, Gosport, any day (Sundays excepted), between the hours of TEN and FOUR, from the 18th of AUGUST to the 8th of SEPTEMBER, 1856. The whole of the works to be completed within 24 calendar months from the date of notification of acceptance of Tender. No notice will be taken of any Tender unless it be in the prescribed form. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders

Royal Engineer Office, Portsmouth, 30th July, 1856.

CONTRACTS.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the War Department, at their Office, Pall-Mall, London, on THURSDAY, the 28th day of AUGUST, 1856, from such persons as may be willing to undertake the ERECTION of a BARRACK for Married Soldiers, with OUTBUILDINGS, &c. at Portsea, in the county of Hants. The plans, specification, and quantities of materials, may be seen, and every information obtained, on application at this Office, on and after the 11th AUGUST, 1856, between the hours of TEN and FOUR each day, Sundays excepted. Tenders to be endorsed, "Tenders for the Erection of a Barrack for Married Soldiers, with outbuildings, &c. at Portsea, in the county of Hants."

Royal Engineer Office, Portsmouth, July 30, 1856.

NOTICE to BUILDERS.—Notice is hereby given, that PLANS and SPECIFICATIONS for REPAIRING the RECTORY-HOUSE at Chiswick, near Brentford, in the county of Hertford, will be lying at Mr. HEADS, Bookseller, High-town, Hertford, on MONDAY, the 4th of AUGUST, and three following days. All parties desirous of CONTRACTING for carrying out the works must send in sealed TENDERS on or before the 14th day of AUGUST, directed to the Rev. J. M. WARD, Chiswick Rectory, Brentford. The Tenders to be in the usual necessary form, with two good and approved sureties, for the due execution of the works, at his own expense.

AMBERGATE, NOTTINGHAM, and BOSTON and EASTERN JUNCTION RAILWAY and CANAL COMPANY.—TO CONTRACTORS.—Notice is hereby given, that the Directors of the above Company will meet at their offices, St. Peter's-gate, Nottingham, on MONDAY, the 11th day of August next, at ONE o'clock in the afternoon, to receive TENDERS for the ERECTION of STONE PIERS, ABUTMENTS, and WING WALLS, and also to receive the wrought iron girders for a bridge to cross the Midland Railway and old Trent-lane, at Beeston, near Nottingham, having a centre opening of about 70 feet, and two side openings each of about 50 feet, measured on the skew face. Drawings at specifications may be seen, and further particulars obtained, upon application to Mr. UNDERWOOD, the Engineer, at the Offices of the Company, on or after the 28th instant. Bills of quantities, with the form of Tender, will be furnished on payment of one guinea. All Tenders must be sealed and addressed to the Secretary. No Tender will be received after TWELVE o'clock at noon of the said 6th day of AUGUST.—By order,

JNO. COUGH, Secretary.

Company's Offices, Nottingham, July 17, 1856.

TORQUAY WATERWORKS.—The Local Board of Health are desirous to receive TENDERS for the SUPPLY of about 1,000 TONS of CAST IRON PIPES, &c. of various sizes and lengths, required in the Parish of Tor-quay. Specification to be seen at the Town Hall, Torquay, Devon, and at the Office of the Engineers, Messrs. EASTON and AMOS, Great Smith-street, Westminster. Sealed Tenders, addressed to the undersigned, to be delivered at the said Hall, Torquay, on or before TWELVE o'clock on TUESDAY, the 5th day of AUGUST next. The Local Board do not bind themselves to accept the lowest or any Tender.

GEO. E. HEARDER,
Torquay, Devon, 19th July, 1856. Clerk to the Local Board.

TO BUILDERS.—Persons willing to CONTRACT for the ERECTION of a PARSONAGE-HOUSE in Saint Nicholas Parish, Deptford, in the county of Kent, are desired to send specifications and offers on or before MONDAY, the 4th inst. at the Offices of the Architect, Mr. JOHN SLATER, Lambeth. Sealed Tenders, endorsed "Tenders for Parsonage-house, Deptford," to be sent to Mr. J. HANSON, on or before the 6th of AUGUST. The Committee do not bind themselves to accept the lowest Tender.

TO CONTRACTORS.—Notice is hereby given, that the Surveyor of the Highways of the Parish of Hillingdon is prepared to receive TENDERS for ERECTING a BRIDGE across the Frays River, at Little Britain, in the Parish of Hillingdon. Plans and a specification may be seen at the Office of Mr. GEORGE EVES, Surveyor, Uxbridge. Sealed Tenders to be delivered on or before TWELVE o'clock on THURSDAY, AUGUST 7th, 1856, at the Office of T. W. WALFORD, Esq. Uxbridge, and endorsed "Tender for Little Britain Bridge." The Survey of Highways does not bind himself to accept the lowest Tender, although he will do so unless there shall appear to him to be a good and sufficient reason to the contrary.

WILLIAM REID, Surveyor of Highways.

Hillingdon, July 16th, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

BOROUGH of SUNDERLAND.
SEWERAGE WORKS. CONTRACT No. 5 for IRON FOUNDERS and OTHERS. The Corporation of Sunderland are desirous of receiving TENDERS for the METAL and IRON WORK required in the Sewerage of the Borough, comprising—
CAST METAL CULVERTS.
CAST METAL PIPES.
CASTINGS FOR MAN HOLES,
GULLY TRAPS AND GRATES.
And other Iron or Metal Work required in the said work. The drawings and specifications may be seen at the Office of THOMAS DARBY, Esq. Architect, 16, Lincoln's-Inn-fields, London; and at the Office of the Borough Engineer, East Cross-street, Sunderland, to whom Tenders are to be addressed, and endorsed "Tender for the Metal Work for Sewerage of the Borough," on or before SATURDAY, the 16th AUGUST 1856. By order,
WILLIAM SNOWBALL, Town Clerk.
N.B. The Corporation is not bound themselves to accept the lowest or any Tender.
Sunderland, 30th July, 1856.

BOROUGH of SUNDERLAND.
SEWERAGE WORKS.—CONTRACTS Nos 4, 5, 6 and 7
To CONTRACTORS, MASONS, EXCAVATORS, and OTHERS. The Corporation are desirous of receiving TENDERS for the following SEWERS:—
Contract No. 4.—BOROUGH-ROAD SEWER.
" 5.—LOW-STREET SEWER.
" 6.—WILLIAM'S LANE SEWER.
" 7.—NEVILLE'S COURT and WHITBURN-STREET SEWER.
And any other Works in connection with the said Sewers that may be required. Plans and specifications may be seen on and after MONDAY, 28th day of JULY next at the Office of WILLIAM CROZIER, Esq. C.E. Borough Engineer, East Cross-street, Sunderland, of whom Tenders are to be addressed, and endorsed "Tender for the Sewerage Works, No. [illegible]," on or before SATURDAY, the 16th day of AUGUST next.
By order, WILLIAM SNOWBALL, Town Clerk.
N.B. The Corporation do not bind themselves to accept the lowest or any Tender.
Sunderland, 30th July, 1856.

KING'S LYNN HARBOUR.—The Trustees of this Harbour are prepared to receive TENDERS for the CONSTRUCTION of a new QUAY, in wood, along a portion of the north side of the Harbour. The specifications of the proposed Quay may be inspected at the Town Hall, Lynn, where sealed Tenders are to be delivered or sent by post, on or before the 31st day of JULY inst. The Trustees do not bind themselves to accept the lowest or any Tender.
EDWD. LANE SWATMAN, Clerk to the Trustees.
King's Lynn, July 15th, 1856.

TO BUILDERS, CONTRACTORS, and OTHERS.—Such persons as are desirous of CONTRACTING with the Justices of the Peace of the County of Middlesex, for the ERECTION of a STOREHOUSE at Leamington, for the 2nd Regiment of Warwickshire Militia, may inspect the plans and specifications of the works on application to Sergeant HART, at No. 1, Parks' cottages, Lambeth, any day from MONDAY to SATURDAY, the 28th of JULY inclusive, after which time Sergeant HART will not be at home. Sealed Tenders are to be delivered free of charge, to Mr. KINDALL, County Surveyor, Warwick, on or before Monday, the 11th of AUGUST, endorsed "Tenders for Militia Stores at Leamington." Persons tendering will be required to enter into recognizances, with two good and sufficient sureties, for the due execution of the works. The Justices are given to accept the lowest or any Tender unnecessarily.
Warwick, July 25th, 1856.

TO CONTRACTORS, BUILDERS, and OTHERS.—The Vestry of the Hamlet of Millwall-old-town will meet on WEDNESDAY, the 13th day of AUGUST next at the Town House Millwall, at SEVEN o'clock in the evening precisely, to receive TENDERS for the EXECUTION of the following SEWERS in the following streets, viz. Albert-road, Albert-street, East-street, James street, Ann-street, Essex-street, Charles-street, Prospect-street, Cotton-street, Cubitt-street, Ward-street, and John-street, commencing at or near the South Ward of the said Hamlet, as shewn delineated on a plan of the same to be seen and open to all persons desirous of tendering, at the Vestry Office, between the hours of TEN and FIVE, and the conditions of the contract to the Vestry. Every Tender will be required to be sealed up and delivered to the Vestry Clerk at the Office aforesaid, on or before TWO of the clock on the forenoon of the day of meeting, in the presence of two respectable persons, who are to be willing to bind with the contractor in the sum of £50 for the due performance of the works, and the Vestry will not be bound to accept the lowest or any Tender.
THOS PHILLIPS, Clerk to the Vestry.
Town House, Millwall-road, July 26, 1856.

DEEPING FEN DRAINAGE.—To BUILDERS and CONTRACTORS.—TENDER for WORKS.—The Trustees appointed under and by the provisions of "the Deeping Fen Drainage Act, 1856," will be prepared at the Office of Messrs. Bell and Grantham, Solicitors, Market Deeping, in the county of Lincoln, on WEDNESDAY, the 27th day of AUGUST next, at ELEVEN o'clock in the forenoon, to receive TENDERS for the CONSTRUCTION of a NEW SLUICE, with three brick drainage pipes, and other Works connected therewith, to be erected at the mouth of the Vernatt Drain, at the junction of the same with the River Glen, at Gosberton Clough, in the parish of Gosberton, in the county of Lincoln, as shewn on the Plan of the said Drainage, deposited with the Clerk of the Peace for the said county, and at the Office of Mr. LEWIN, the Engineer, Bridge-street, Boston, and at the Office of Mr. [illegible]. Each Tender is to be prepared with the name and residence of their sureties at the time of delivering the same to the said Trustees, and the lowest Tender, or any other, except otherwise ordered, will be accepted by the said Trustees.
By order of the Commissioners of Sewers.
JOHN CARTER, Clerk.

BOROUGH of LEEDS.—To CONTRACTORS.—WANTED, by the Town hall Committee of the Borough of Leeds, No. 8 Section [illegible] WORK of the Tower of the Town Hall, in accordance with the plans and specifications prepared by Mr. CUMBERLAND, Architect, Leeds, and after the 29th instant, and sealed Tenders are to be sent in to the Town Hall, Leeds, on or before the 12th day of August next, addressed to the undersigned, "Tender for Town-hall Tower." The Committee do not pledge themselves to accept the lowest Tender.
JOHN V. BRIGGS, Town Clerk.
Leeds, 19th July, 1856.

TO BUILDERS, CONTRACTORS, and OTHERS.—The Commissioners for BUILDING NEW CHURCHES with two Resident Curates at LUTON, Bedfordshire, are desirous of receiving TENDERS for the ERECTION of the same, in accordance with the plans and specifications prepared by Mr. C. G. PEARSON, Architect, and to be seen, at bills of quantities may be procured, at the Office of Mr. J. CUMBERLAND, Architect and Surveyor, Luton; and of Mr. C. POLAND, Surveyor, 72, Margaret-street, Cavendish-square, London. The Tenders are to be addressed to the Rev. T. BARTLETT, M.A. the Vicarage, Luton, Bedfordshire, endorsed "Tender for National Schools," and no Tender will be received later than TUESDAY, the 19th of AUGUST next. The Commissioners do not bind themselves to accept the lowest or any Tender.
Luton, 19th July, 1856.

TO BUILDERS.—BLANDFORD UNION.
The Guardians of the Blandford Union invite TENDERS from persons desirous of CONTRACTING to BUILD a NEW WORKHOUSE for the above Union, in accordance with plans and conditions for such new Workhouse can be viewed on application to the Clerk of the Union; and all information required can be obtained from Mr. G. D. CREEKE, Architect, Bournemouth, Hants. Tenders to be sent to the Clerk, on or before FRIDAY, the 8th of AUGUST next.—By order of the Board,
W. H. ATKINSON, Clerk to the Union.
Blandford, July 17, 1856.

CONTRACTS.

WHITECHAPEL UNION.—PROPOSED NEW WORKHOUSE.—The Guardians of the Whitechapel Union, having resolved to take into consideration the propriety of erecting a new Workhouse for the said Union, will meet at the Board room, at the Workhouse, in the Whitechapel-road, on TUESDAY, the 19th day of AUGUST next, at ONE o'clock in the Afternoon precisely, to receive TENDERS for the ERECTION of the FIRST PORTION of the PROPOSED NEW WORKHOUSE, in Charles-street, Mile End New Town, pursuant to, the Act of 21 Geo. 3, c. 64. Further particulars may be obtained, and the plans and specifications inspected at the Offices of THOMAS D. BARRY, Esq. Architect, 16, Lincoln's-Inn-fields, London; and of Basil-street North, Liverpool. By order of the Board,
G. ADAMS FARR, Clerk.
2, Mount-place, Whitechapel-road, 28th July, 1856.

TO BUILDERS and OTHERS.—TENDERS for the COMPLETION with fences &c. and for the PURCHASE (in small lots or parcels) of FOUR Third-rate DWELLING HOUSES and PARCANS, situate near the Wimbledon Railway Station, will be received until SATURDAY EVENING, AUGUST 9, at the Office of the Architect, Mr. WYATT PAPWORTH, 14a, Great Marlborough-street, Regent-street, where the specifications and conditions may be seen. The purchase may be completed by the Tenant, if required, by a Mortgage for part of the purchase money.

THE LOCAL BOARD of HEALTH for TOTTENHAM are prepared to receive TENDERS from persons duly competent for any of the following works:—
CONTRACT No. 1.—Making Two Roads, &c.
CONTRACT No. 2.—Laying Cast-iron Water-pipes and a Drain.
CONTRACT No. 23.—Delivering about 120 Tons of Cast-iron Water-pipes and Castings.
CONTRACT No. 24.—Erecting an Engine at Hunter House, &c.
CONTRACT No. 25.—Making and Erecting a High-pressure Expansive and Condensing Steam engine, &c.
The specifications, conditions of contract, drawings, and plans, may be inspected and further particulars obtained, by application at the Offices of the Board, or at the Offices of J. PILBROW, C.E. Engineer to the Board, Tottenham-green. Sealed Tenders (properly endorsed and addressed to the Local Board of Health, Tottenham, Middlesex), must be sent in on or before THURSDAY, the 31st of AUGUST, 1856. By order of the Board,
Tottenham, July 30th, 1856. WILLIAM HEATH, Clerk.

MIDLAND RAILWAY.—To BUILDERS and CONTRACTORS. The Directors of the Midland Railway Company are receiving TENDERS for the ERECTION of an ENGINE-SHED (to contain twenty-four engines), FITTING-SHOP, and other BUILDINGS, at the Locomotive Station, Sandiacre, for the ERECTION of an additional WORKSHOP, for the Locomotive Department at Derby.—Drawings and specification for the above may be seen at the Engineer's Offices, Derby Station, on and after WEDNESDAY, the 6th of AUGUST next. Tenders to be delivered to the Secretary at the Way and Works Committee, Derby Station, not later than TEN a.m. on TUESDAY, the 19th of AUGUST next. The Directors do not bind themselves to accept the lowest or any Tender.—By order,
Derby, July 30, 1856. JOSEPH SANDERS, Secretary.

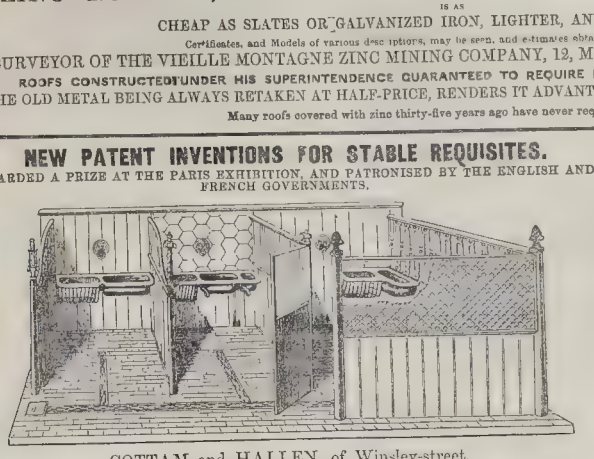
ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWOR.

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.



ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER TROUGH, and WROUGHT-IRON RACK, united to an iron top plate, and forming one complete and neat fixture having Soraan's Patent Noiseless Halter Hook and Collar attached, the ball of which is given to the back of the manger, and works with ease and freedom up and down the guide bar. Cottam's new Patent Feed-Box, of galvanized sheet-iron, is an important addition to the above fittings, constituting an economical, light, and durable, promotes cleanliness, and is so nominal in its results. Also, the Patent Double and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings.

Chea, and Durable Corn-bins.

Improved Surface Drain, with safety covers, Sanitaire Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates sent upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES

eyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No 16	1½	7s. 0d.
15	1¾	7s. 6d.
15	2	8s. 0d.
15	2¼	8s. 6d.
15	2½	9s. 0d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11 inches, and turning one side of each notch in succession one storey deep from one end of the iron to the other, thus forming REVERSED CLAWS, which have so bent that a direct line from the reverse sides of the iron, if continued, would run out at the opposite end grain of the iron is presented lengthwise, and when built up in the course of work, united fed in the structure by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wood or metal in combination with concrete, constructed likewise, the floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the Kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as preventing the great deterioration of fire-proof constructions, even for ordinary dwelling-house and domestic buildings, with a trifling cost over the

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

FOUNDRY AND IRON WORKS,

LESS FUEL, MORE STEAM, NO SMOKE.

GARDNER'S PATENT SMOKE CONSUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotive, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, Nov. 10th, 1855.

"DEAR SIR, In answer to your letter in reference to the saving of fuel in connection with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coil. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.

"I remain, dear Sir, yours truly,

"To E. V. GARDNER, Esq." "FRED'K. ALLEN.

Apply to the PATENTEE, 21, Norfolk-street, Middlesex Hospital; or to Messrs. BURRIDGE and HEALY, 118, Dorset-street, Fleet-street; or Z. D. BERRY, Albion Works, Victoria-road, Pimlico.

Bakers' ovens fitted to roll in any position.

PATENT MACHINES for WORKING in WOOD.—These celebrated Machines have been awarded a number of prize medals by having shown the best results, and also by the Great Exhibition in London, and are now extensively used by the Indian, American, and all the principal governments in Europe; also by eminent Contractors, Builders, Shipwrights Machinemakers, and other workers in wood. Their operations are in every respect perfect, either in hard or soft wood, for planing, squaring up, moulding, tenoning, mortising, sawing, rebating, sawing, and boring, which they perform in a very rapid and superior manner, at a greatly reduced cost. Sold only by WILLIAM FURNESS, Patentee, 20, Lawton-street, Liverpool, from whom full particulars may be obtained, and all the machines can be seen at work.

WOOD-CUTTING MACHINERY, JOHN M'DOWALL and SONS, WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow, MANUFACTURERS of VERTICAL SAW-FRAMES (driven by steam),

For cutting balks of timber, from 5 feet on the side down to the smallest batten size.

Patent vertical saw frames, of the foregoing dimensions, with steam-power attached, circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working long boards from a ¼ of an inch thick to 6-inch deck plank; revolving planers, for dressing and sizing battens, &c., used by ship-builders, &c; patent curvilinear sawing machines, for circles, scrolls, and irregular figures; improved [illegible]; power for cutting and finishing moulds; [illegible]; circular saws and double veneer mills of all sizes, with all appendages; sole-board machines, for hat-boxes, &c.; patent sheet feed motions for saw-frames; and every description of machinery for sawing and shaping timber, and dressing it for the best materials, and first class working ship. Mr. M'Dowall has been in the constructing and [illegible] for upwards of 20 years, during the last 24 years he has directed his attention particularly to the construction of wood-cutting machinery, as evinced by the numerous patents he has obtained for the improvement of the various machines in that line, and from the large and numerous premises, and first-class plant made for every department, the undersigned is prepared to execute contracts can be executed with a regularity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

ESTABLISHED 1805.

The present price is 6s. to 6s. 6d. per gallon; white French polish, 8s. per gallon; pale shellac, 1s. 3d. per lb.; gums, shellacs, and acid at the lowest prices. A net cash list forwarded on application to JAMES SLIPPER, 87, Leather-lane; and 14 and 15, Dorrington-street, Holborn, London.

A SUBSTITUTE FOR PAINT, AND AT HALF THE COST.
STEPHENS' DYES or STAINS for WOOD. The following extract from a letter the Proprietor has obtained leave to make public:—"Northgate, Colchester, Feb. 5, 1855.—Sir,—I have just finished a new church with your Oak stain, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.—I am, sir, your obedient servant,
"SAMUEL GRIMES, Builder.
"To Mr. Henry Stephens, 54, Stamford-street, London."
Samples and Specimens free to any part of the kingdom.

TO BUILDERS, PAINTERS, &c.—OAK GRAINING in OIL, 4d. per yard, in quantities not less than 60 yards. Church writing done in the Elizabethan style. No objection to the country, if expenses are paid. Reference given.—Apply to CHARLES PETTET, 7, Princes-street, Edgware-road.

TO BUILDERS, CONTRACTORS, and LAND SURVEYORS.—WILLIAM MARSHALL begs to inform the Trade generally that he has opened the extensive premises (formerly Stevens's) known as Ogle Bridge Wharf, Kingsland-road, for the sale of FLOORING and MATCH-BOARDS, White and Yellow Deals, Pine, and good dry Wainscot, in all thicknesses.
J. CABINET, BEDSTEAD, and COACH MANUFACTURERS.—A very large assortment of Mahogany, Rosewood, and Walnut Veneers and Solid Wood; also a well-seasoned stock of Panel-board and Birch, fit for immediate use.—Business at Vincent-square, Old street-road, as usual.

TO BUILDING-MATERIAL DEALERS. The MATERIALS of a HOUSE, situated near one of the London bridges, to be SOLD by PRIVATE TENDER.—Apply to Mr. HAMILTON, 4, East-side, Camberwell-green.

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

TO ARCHITECTS AND OTHERS WHO INTEND BUILDING.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

CLARK AND CO. 15, GATE-STREET, LINCOLN'S-INN-FIELDS; AND LITTLE QUEEN-STREET, HOLBORN.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that **FOUR-FIFTHS** of the **ROUGH PLATE**, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for **RIDGE** and **FURROW ROOFS**, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders **BLINDS UNNECESSARY**, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock. By enclosing a postage-stamp, a full list of prices will be returned. Workshops, 110, Broadwall.

DUNCAN and CO. MANUFACTURING JOINERS, 81, Lower Marsh, and 39, James-street, Lambeth.—Joinery of all descriptions, with seasoned materials and sound workmanship, supplied on the shortest notice and lowest possible prices. A detailed list forwarded on application, prepaid. A quantity of doors, &c. in stock, suitable for immediate use.

In 8vo. price One Shilling,

INTRODUCTION and PROGRESS of the SCREW PROPELLER, with Statistics showing the comparative economy of the Screw over Paddles.
London: LONGMAN and CO.

GALBRAITH AND HAUGHTON'S SCIENTIFIC MANUALS.

4th Edition, 7th Thousand, fcp. 8s. 6d. cloth, 12s. 6d. calf.

MANUAL of MECHANICS. By the Rev. J. A. GALBRAITH, M.A. and the Rev. S. HAUGHTON, M.A.
Fellows and Tutors of Trinity College, Dublin.
4th edition, greatly improved, containing Three entirely new Chapters. 1. On the Equilibrium of Forces in a Plane. 2. On the Collision of Bodies. 3. On Projectiles.
Previously published, by the same Authors,
MANUAL of ARITHMETIC. 6th Thousand, 2s.
MANUAL of ASTRONOMY. 2nd Thousand, 2s.
MANUAL of PLANE TRIGONOMETRY, 3rd edition, 2s.
MANUAL of EUCLID, Books I. and II. 2nd Thousand, 1s.
MANUAL of HYDROSTATICS, 2nd edition, 2s.
MANUAL of OPTICS, 2nd edition, much enlarged, 2s.
London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for JULY, 1856, is now ready. Price 1s.
London: HENRY GEO. WARREN, 2, Red-lion court, Fleet-street, and 67, GEORGE ROUTLEDGE and CO. Farringdon-street.

1 Vol. Handsomely Bound, 21s.

BUILDINGS and MONUMENTS, Modern and Mediæval. Their Histories and Principles of the Nineteenth Century, and Some of the Architectural Works of the Middle Ages.
By GEORGE GOLWIN, F.R.S.
Fellow of the Royal Institute of Architects, &c. Editor of "The Builder," and Corresponding Member of several Societies.
With numerous Illustrations.
Published at the Office of "The Builder," 1, York-street, Covent-garden.

Third Edition.

THE BUILDER'S FRIEND, Price One Shilling.
Office of "The Builder," and of all Booksellers.

A COMPANION WORK TO "HINTS ON HOUSE PROPERTY."
In the Press, a New Edition, revised, a book that has been long wanted by all architects, auctioneers, builders, &c.

LANDED PROPERTY: its Sale, Purchase, Improvement, and General Management; containing advice and information respecting the selection and valuation of Houses and Estates, Building Leases, valuable suggestions for the improvement of the condition of the country gentleman, the tenant farmer, and the cottage proprietor.
By FRANCIS CS. ARCHER, Architect and Surveyor, 54 Moorgate-street City.

A NEW BOOK FOR SCHOOLS.
Second Edition, 7th Thousand, 3s. 6d. cloth.

THINGS NOT GENERALLY KNOWN, FAMILIARLY EXPLAINED. A Book for Old and Young.
By JOHN TIMBS, F.S.A.
"The notes contained in it are generally well worth knowing, and the book will, from every one of its pages, those suggestive little facts in which the mind take pleasure."—*Examiner*, May 24.
"This work has already been extensively introduced into our schools, and with success."
DAVID BOGUE, Fleet-street.

Forwarded on receipt of 42 penny postage stamps.

ARCHITECTURAL BOTANY; setting forth the Geometrical Distribution of Foliage, Flowers, Fruit, &c. with twenty Original Designs for Decorating Cornices, Spandrils, Crosses, Corbels, Capitals, Bosses, Panels, &c.
*** Part II. nearly ready.
By W. P. GRIFFITH, F.S.A. F.R.I.B.A. &c., St. John's-square, London.

On 1st of August, price 2s., No. CXV. (LXXIX. New Series)

THE ECCLESIOLOGIST; published under the superintendence of the Ecclesiological Society.
Contents. On the Duty of Subjunity, and Beauty in Cathedral Architecture.—On the Saint-te Chapelle at Paris.—St. Alban's Abbey to be restored. Firmin-Didot's Handbook of Architecture. Chancel Screens.—Lichfield Cathedral.—The Theory of the Prayer-Book. No. II. Symbolism. The Mediæval Church at Vienna. The Lille Cathedral Competition.—St. Paul's and the Duke of Wellington.—Parish Architecture.—The Bishop of Oxford. Reports of Societies.—New Churches.—Church Restorations.—Notices, &c.
London: J. MASTERS, Aldersgate-street and New Bond-street.

LEVELLING, Surveying, Drawing, Mapping, Estimating, for Railway or other works; Enlarging, Reducing, Copying, Tracing, &c. undertaken by Mr. C. B. RICHARDS (late assistant of the Metropolitan Commissioners of Sewers), Surveyor to the District Boards of Works or Local Boards of Health, will find him a very valuable assistant, from his experience in all the details of Sewage Works. 4, Trafalgar-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES Established by Messrs HYDE SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading, and Tinting; Ornamental and Watercolour Drawing; Perspective, Isometrical, and Geometrical Drawing; Making, Finishing, and working Drawings; Planning Buildings; Surveying, Levelling, Setting out Estimates, Measuring and Valuing Builders' Work, &c. &c. Terms: Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, or terms made for the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Buckingham-street, Russell-square.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments, manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated pricelist will be immediately forwarded, free, on application.
N.B. A few New and Second-hand Levels and Theodolites always for Sale.

FIRST-CLASS ENGRAVING. — T. DAVIS, 17, Liverpool-street, City, near the Royal Exchange, Engraver, Die-sinker, Letter Cutter, Seal Engraver, and Electrotyper. Stamp Maker and Printer, Zinc and Brass Door-plates, Labels, Gentlemen's and Tradesmen's Card Plates, Ornamental and Heraldic Engraving, Steel and other Stencil Plates for marking linen, packages, &c. Illuminated and Ornamented Letters, for illuminating. Letters cut, of all descriptions, for every purpose, for cash.

MONUMENTAL BRASSES, SEALS, PLATES for Mural and Incised Slabs.—T. MORANT, Engraver and Heraldic Artist, 41, High Holborn.

TO BUILDERS AND CONTRACTORS
A PRACTICAL SURVEYOR, of many years' experience in taking off quantities, estimating, measuring works, valuing dilapidations, &c. would be glad to undertake any BUSINESS for BUILDERS, upon strictly responsible terms. Advice and assistance to friendless young builders and architects, if required.—A note addressed to Mr. WILLIAMS, Office of "The Builder," will meet with prompt attention.

LITHOGRAPHY.—Every description of Maps, Plans of Estates, Engineering, and Architectural Drawings, Bill Heads, Circulars, &c. executed with despatch, at C. MOODY'S Drawing and Printing Offices, No. 527, High Holborn.
N.B. Artists supplied with Paper to obtain for Oil and Water-colour Drawings, &c.

THE ARCHITECTS', BUILDERS', ENGINEERS', and SURVEYORS' REGISTRY OPEN to EMPLOYERS (free), from TEN to FOUR o'clock.—Several thoroughly efficient Surveyors, Levellers, Clerks of Works, and Draughtsmen now in the Register. Offices to be ascertained before recommended.—Apply to Mr. RICHARDS, Engineer and Surveyor, 4, Trafalgar-square.

A FIXED ALLOWANCE OF 6l. PER WEEK, In case of Injury by
ACCIDENT of any DESCRIPTION, or the Sum of
1,000 IN CASE OF DEATH,
may be secured by an annual payment of 3l. for a policy in the RAILWAY PASSENGERS' ASSURANCE COMPANY.
A weekly allowance of fifteen shillings for injury, or 100l. in case of death secured by payment of ten shillings.
NO CHARGE FOR STAMP DUTY.
Forms of proposal, prospectuses, &c. may be had of the agents of the Clerks at all the principal railway stations, and at the head office, 3, Old Broad-street, London, where also
RAILWAY ACCIDENTS ALONE
may be insured against by the journey or by the year as heretofore.
Railway Passengers' Insurance Company, empowered by a Special Act of Parliament.
WILLIAM J. VIAN, Secretary.
Offices, 3, Old Broad street, London.

PELICAN LIFE INSURANCE COMPANY, established in 1797.
70, Lombard-street, City, and 57, Charing cross, Westminster.
DIRECTORS.

Robert Gurney Barclay, esq.	Nikman D. Hodgson, esq.
William Cotton, D.C.L. F.R.S.	Thomas Hodgson, esq.
John Lassa, esq.	Henry Lancelot Holland, esq.
William Walter Fuller, esq.	Benjamin Shaw, esq.
Jas. A. Gordon, M.D. F.R.S.	Matthew Whitting, esq.
Lewis Grace, esq.	M. Wyvill, jun. esq. M.P.

NOTICE.—In order to remove any apprehension that might be entertained as to the perfect security of the Policies granted by the PELICAN LIFE OFFICE, the Directors have omitted every Clause that would render them void by reason of any error in the Statements made by the Assured before or at the time of effecting an Insurance. Moderate rates of premium with participation in profits. Low rates without profits.
LOANS.—In connection with Life Assurance on approved security.
For prospectuses and forms of proposal apply at the offices as above, or to any of the company's agents.
ROBERT TUCKER, Secretary.

BRITISH EQUITABLE INVESTMENT COMPANY.—Capital, 100,000l.—Chief Office, 47, King William-street, London-bridge.
made on every description of mark.table security.
Term of warrant not exceeding fifteen.
Periods for repayment may be either enlarged or shortened by a receipt, but cannot be completed without the consent of the borrower. Quarter of repayments to liquidate principal and interest.
4 Company pays expense of security to company.
5. Redempt on each paid to meet the wishes of borrowers.
Quarterly repayments to liquidate an advance of 500l. to cancel principal and interest:—

In five years	£11 3 9
In ten years	18 11 2
In fifteen years	13 7 10

W. S. GOVER, Managing Director.

THE LONDON and WESTMINSTER BANK issues CIRCULAR NOTES of 10l. each, payable at every important place in Europe. These notes escape issued without charge, and they are cashed abroad free of commission. The Bank also issues, free of charge, Letters of Credit on all the principal cities and towns in Europe. These Letters of Credit are issued only at the Head Office in Lothbury. The Circular Notes may be obtained at the Head Office in Lothbury, or at any of the Branches, viz.—
Westminster Branch, 1, St. James's-square.
Bloomsbury ditto, 214, High Holborn.
St. Saviour's ditto, 4, Westminster-street, Borough.
Eastern ditto, 87, High-street, Whitechapel.
Marylebone ditto, 4, Stratford-place, Oxford-street.
Temple Bar ditto, 217, Strand.
The rate of interest allowed on deposits of 500l. and upwards, at the Bank or any of its Branches, is now 2½ per cent.
J. W. GILBART, General Manager.

TO BORROWERS.—LOANS GRANTED on HOUSE PROPERTY, on New and Advantageous Terms. 1. Advances granted from 1,000l. to 5,000l. 2. No Legal Expenses payable to Lender's Solicitor. 3. Repayment on Building Society System, and moderate. 4. Redemption, or Exchange of Securities, if by. 5. The Term of repayment protracted or shortened in certain cases. 6. No Fines. Sums received, at deposit, at 5 per cent. interest, repayable half-yearly.—Apply to the British Equitable Investment Company, 47, King William-street, London-bridge. Incorporated. Capital, 100,000l.
W. S. GOVER, Managing Director.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c.—The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers of every description, may be supplied with any quantity by DAVID GREENLEY, Civil Engineer, and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

IMPORTANT to BUILDERS and PAINTERS.—Genuine White Lead, 23s. per cwt.; Linseed Oil, 3s. 2d. per gallon; Boiled Oil, 3s. 6d. per gallon; Turpentine, 3s. 7d. per gallon;
Fine Pale Oak Varnish, 7s. 6d. per gallon.
For cash at EDWARD PRICE'S Oil and Colour Warehouse, 45, Lisle-street, Leicester-square. Every article for the trade at the lowest price.

TO PAINTERS, BUILDERS, &c.—LIVETT, FRANK, and SON No. 14, Borough London-bridge (opposite the Bricklayers' Arms), Wholesale Oil and Colour Merchants, quote their present prices for cash: Linseed Oil, 3s. 2d.; boiled, 3s. 4d.; turpentine, 3s. 6d.; pale varnish, 7s. 6d. per gallon; genuine white lead, 23s.; ochres, 3s. per cwt.; best town glass, 40s. per box; colours, brushes, &c. equally low. Lists of prices on application.

ONE HUNDRED LOADS of CEILING LATHS for SALE. Price, 3½d. per load, net. Inquire, 1, N. Wharf, Hertford-road, Kingsland Basin.

WANTED to PURCHASE, a BUILDING SITE or PREMISES in London, west of Temple-bar (either freehold or long leasehold), in or near a leading thoroughfare in a central situation, suitable for a charitable institution.—Letters (post paid), stating full particulars, to be addressed to Mr. E. GOULD, 8 Craig's-court, Charing-cross.

BERKHAMPSTEAD. — FREEHOLD LAND. TWELVE PLOTS for SALE, adapted for villas of moderate size; each situate, and approached from a first-class railway ticket for twenty-one years is offered to persons building houses of a suitable character, and of the value of 50l. a year. The Free Grammar School is of the very first advantages to residents.—For a plan of the land and further particulars, apply to Mr. BALDWIN, High-street, Berkhampstead.

SUBURBAN VILLA and VILLAGE ASSOCIATION, 33, MOORGATE-STREET, London, August 1, 1856. TO BUILDERS.—Plans and specifications for the ERECTION of FOUR HOUSES at the Kingsbury, near to Neasden, Middlesex, of Mr. GEORGE ELLINGTON, Architect and Surveyor, 30, Cannon-street, City.—ENDERS addressed to the Secretary as above, to be sent in, on or before the 12 inst. The Directors do not pledge themselves to accept the lowest or any Tender.

WHARFS and STORES in the Adelphi.—TO BE LET, for a term, or by the year, together or separately, TWO WHARFS, each having house, counting-house, store, and stabling; one with dock space for fifteen barges and the other for twenty-five barges, and each with a dry-dock. Rent moderate. Possession immediate. Reference for further particulars to be made to Mr. C. PALMER, General Railway Office, 44, Gresham-street, City.

WATFORD, HERTS.—FREEHOLD LAND, in Church-road, near the Railway Station, TO BE SOLD, or LET on BUILDING LEASES. An advance on mortgage will be made, if required.—Apply, by letter, to Mr. WILSHIN, Waxwell-farm, Pinner, Middlesex.

WANTED to PURCHASE, from FIVE to FIFTEEN ACRES of FREEHOLD LAND, near London, upon a dry soil.—Address, with full particulars and price, to D. CULLINGTON, Esq. Solicitor, 2, Craven-street, Charing-cross.

TO SURVEYORS, BUILDERS, GENTLEMEN, and OTHERS.—Unusual and safe speculation. NINETY beautiful CHIMNEY-PIECES for 35l. to close accounts. Mr. E. D. BARLOW has received instructions to DISPOSE OF, by PRIVATE SALE, the remaining STOCK of his and Co.'s celebrated patent MARBLE CHIMNEY-PIECES, of varied and chaste design.—May be viewed and every particular obtained, on application to Mr. BARLOW, Auctioneer and Valuer, Great Western Auction Room, 1, 2, 3, South-ampton-row, New-road, corner of the Edgware-road.

GROUND-FLOOR, HANOVER-STREET, HANOVER-SQUARE. To be LET, as under for Architects, Artists, or other professions; comprising two front offices, large room behind, now used as a Picture Gallery.—LAHEE, 65, New-bond-street, Agent.—[Free.]

GOOD FAMILY RESIDENCE WANTED, on Lease; Hyde-park district preferred. Five reception and principal bedrooms must be required, and the position in every way desirable. If with stabling preferred.—Address full particulars to Z. M. J. care of Messrs. HAMMOND and NEPHEW, 27, Lombard-street.

BUILDING and BRICK EARTH LAND at Holloway TO BE SOLD or LET, in large or small quantities. Apply to Mr. PEACHEY, 17, Salisbury-square, Fleet-street.

FOR SALE, to pay a Purchaser 8 per cent. several Ten-roomed Private DWELLING-HOUSES, held from the Freeholder for 82 years, and let on short terms to highly respectable tenants at 45l. per annum, subject to a small ground-rent. This property is situate within five miles of London, and lately Let rated. For further particulars apply to Mr. A. C. HOOK, Land-agent, 124, Great George-street, Westminster, where plans may be seen.

TO POTTERS, BRICKMAKERS, and OTHERS. TO BE LET, EIGHTEEN ACRES of LAND, containing an inexhaustible supply of pipe clay, brick-earth, brick-clay, and fine sand, a waste head of water, in the county of Hants. The whole of the erections and plant can be rented at a moderate sum. Grounds in for stock very trifling. Specimens can be seen, and further particulars had, by application to Mr. S. BROAD, Auctioneer and Valuer, Above Bar, Southampton.

TO IRONMONGERS.—TO BE DISPOSED OF, the BUSINESS of an IRONMONGER, situate in one of the best trading thoroughfares at the east end of London, established fourteen years. Stock and fixtures about 1,000l. Premises and trade lease, and the business, as a set of being considerably extended.—For further particulars, apply on the premises, to J. MEEK, 3, Cambridge-place, Hackney-road. No agents need apply.

TO STONE, MARBLE, and STATUARY MASONS.—TO BE DISPOSED OF the proprietor retiring, an old-established BUSINESS in the above line. The Stock in the Yards is valuable; the House and Yard at a yearly rental. The premises are most eligible, frontage 40 feet, depth 50 feet.—For particulars address X. X. 24, Lower Belgrave-place, Pimlico.

TO PLUMBERS, GLAZIERS, and OTHERS. TO BE DISPOSED OF, an old-established and BUSINESS in the above line, having been carried on successfully by the late proprietor for nearly forty years, offering an eligible opportunity for a young man wishing to commence for himself.—For particulars apply to MESSRS. BELL, Auctioneers, &c. 8, Clement's-lane, Lombard-street.

ROYAL POLYTECHNIC.—Patron H.R.H. Prince ALBERT.—On Monday, August 4th, at Eight p.m. the Rev. Charles Boutell, M.A. will lecture on "Architectural Studies of the Crystal Palace." On Wednesday and Friday, at Four and Nine, the Grand Series of Views after David Scott, as published by Graham and Co. illustrating Bunyan's Allegory of the Pilgrim's Progress, with descriptive Lectures by Rev. J. B. Brasted. On Tuesday, Thursday, and Saturday, at Three, Lecture by J. H. Pepper, esq. on the Moon Controversy.—On the same days, at Four and Nine, the Historical Entertainment of Rembrandt, and at Half past Three and Eight, Performances by Mdlle. Naudin on the Cither, and by Herr Alvom on the Child's Monochord.

KENT'S PAINTING-BRUSHES are of the very best quality, and may be obtained at all the principal Ironmongers' and Oilmen's in the Kingdom. J. B. KENT and SON, 33, Old Bailey, Manufacturers of Brushes and Tools for Painters, Builders, Decorators, Artists, &c. Established 1777.
N.B. Kent's Painting Brushes are all stamped G. B. KENT & SONS.
Price Lists forwarded by post.

BEST PAINTING-BRUSHES.—J. BAILOK, Painting Brush Manufacturer, 2, Bury-court, St. Mary-Axe, London, invites the attention of Painters and Builders to his Brushes and Tools, both Metal and String-bound, which being manufactured on his own premises, and of brushes of the best quality, he can recommend as a superior article. Price List forwarded on application, post-free.

The Builder.

Vol. XIV.—No. 704.

FROM its cathedral, its castle, and its old houses, Rochester has long been an inviting place to the antiquary; and it has become otherwise interesting from some associations. Here, the learned members of the Pickwick Club first halted; and here an inscription still announces that "six poor travellers," "not being rogues or proctors, may receive gratis, for one night, lodging, entertainment, and fourpence each." Strood, opposite Rochester, on the near side of the Medway, has itself a few interesting remnants of domestic architecture. The old bridge, shortly to be removed, would just now claim a record—though most of the antiquities of Rochester have been spoken of, and illustrated from time to time in our pages. But the new bridge now completed, and the bridge for the East Kent Railway, in progress, which adjoins the other, present special features of interest—being truly worthy illustrations of the characteristics of the works of the present day, in the amount of scientific calculation and engineering design which enters into their projection and construction.

As will be observed by the plan,* the new "town-bridge" is in continuation of the line of the main street, whether on the Rochester or the Strood side of the river; whilst the old bridge carried the road by a very circuitous course. It is therefore curious that the site last referred to should at the time of the building of the bridge, have been considered "a better place" than the line of a still older bridge, which was, in fact, the same as that of the bridge just completed. Of the older bridge remains have been met with. The Strood pier there, indeed, is on the site of one of the piers of that old bridge; and in carrying out the works, as described in a paper by Mr. John Hughes, read before the Institution of Civil Engineers in 1851, a mass of Kentish rag-stone, of the nature of rubble, without mortar, was found for a depth varying from 13 feet to 25 feet below the present bed of the river. "Pieces of timber of considerable dimensions, and having been used as piles, or framing, occurred in this bed of rubble stone, penetrating a foot or two into the gravel, which proved to be 6 or 8 feet thick." On reaching the chalk, all traces of the kind were lost. The timber was oak, elm, and beech. All the timber was sound and tough except the beech, which last was "saturated with water, and had the condition of a soft pulp." It may be well to remark, that in the foundations of the London Custom-house, which failed from causes which have been adverted to in these pages, beech piles, used green with the bark on, are said to have been chosen advisedly, on the special ground of the durability of beech under water. In the remains of the Rochester bridge, fragments of iron showed that the piles had been shod with that material. A few of the pieces of timber "had evidently been burnt." These discoveries correspond with what is recorded of the old structure. The date of that bridge is unknown; but about 1115 a code of regulations for its maintenance and repair was recorded by the bishop; and from these it seems that the bridge was of wood, on stone piers. There were ten openings, and nine piers 43 feet apart from centre of pier to centre of pier, the roadway over each opening being supported by three "sullivas," or "beams" of large dimensions, that they might "well support the planks and the great weight of all those things that pass over them." But the openings on either side of the sixth pier were provided with each, two such beams only. Thick planks were laid on the beams, and there was a low "balustrade,"—the roadway being supposed to have been about 10 feet wide. A wooden tower, called a *fortification*, built with "marvellous skill," stood near the east end, or on the Rochester side. In 1264, in the Barons' wars, when Rochester Castle held out for Henry III. the upper works of the bridge were burnt by Simon de Montfort, Earl of Leicester. In 1281, it is recorded that some of the stone piers were carried away by ice, after which the structure was ruinous till 1344-5, when the passage was made safe, and a drawbridge and barbican were added on the Strood side; but hereupon the traffic became so great, that in 1347, the bridge was again deemed unsafe. Still forty years passed ere the now existing old bridge was commenced. Even of this work, indeed, little appears in our view. Such remains of the ribbed Gothic arches as there are, however, are interesting,—examples in old pontine architecture in this country being few in number. There is a Gothic bridge at Eltham, in Kent; but much smaller, and later in date. The original stone bridge at Rochester was erected by Sir Robert Knolles and Sir John de Cobham, in great part from the proceeds of the spoils of "towns, churches, monasteries, and cities," in France, obtained during the wars of the preceding reign; and it is in the statute enacted for the repairs of bridges, dating in 1392, that the "better place" of what was then the new bridge is referred to.*

Rochester-bridge had required to be patched and propped from a period commencing many years back: the foundations of the piers, put in on the old principle, were of course, liable to be undermined; and it will be seen by the plan, that the starlings greatly obstructed the waterway. A view taken in the year 1820, now before us, represents somewhat more of the old character than the view we give. But the centre opening is there formed of timber; many of the openings appear to be faced with semicircular arches, and the balustrade is as it now exists.—Just lately the stream has been widened, as shown on the plan,—the improvements imposing the provision of a navigation way to the above-bridge part of the Medway. This requirement has obliged the adoption of a swing bridge at the Strood end of the new structure; and a similar contrivance, of course, is also provided in the railway bridge. This latter bridge, closely adjoining the town bridge, from which it wholly differs in character,—appearing above it in one view, and hiding it on the other side,—whatever its merits otherwise, is certainly most unfortunately designed for the effect of its neighbour; and in the view and elevation of the town bridge we have ventured to omit it. A temporary bridge now joins on to the old bridge, and a new retaining wall to the Strood bank has been constructed, protected by piles. Since these works were executed, the old bridge is said to have given fresh signs of weakness.

The management of the affairs of the bridge rests with two "wardens" and twelve "assistants," annually elected, according to an Act of Parliament of the time of Elizabeth, passed subsequent to a commission of inquiry. The estates are reported to produce a considerable rental. Part of the property bounds the Rochester bank; and here it is just now proposed to form a broad esplanade, extending for some distance, and having a retaining wall, surmounted by the old balusters of the bridge. It is also proposed to widen the entrance to the High-street, at the end of the new bridge. The record-room or bridge chamber stands near to the end of the bridge, on the Rochester side, and beneath it is the site of a porch of a chapel, or chantry, founded by John de Cobham, at the time of the building of the bridge. The chapel, "formerly called Allesolven, or All Souls, was intended chiefly for the use of travellers; and three chaplains were appointed to officiate in it, at a salary of 6*l.* each, yearly, payable out of the income of the bridge estates."*

The new town bridge and the railway bridge each consists of three openings, besides the swing bridge, which there is to each. It is in the swing bridges and the method adopted in the foundations that the chief interest and merit of these works is to be observed. In that part of the town bridge which opens, the most elaborate system of contrivances is resorted to, to relieve the work from all strain in its ordinary position fixed for land traffic, and to attain the utmost durability in the working parts. Each of the swing bridges is formed of wrought-iron rivetted girders, strutted,—the centre, or pivot of the swing, in the case of the town bridge, being on the pier, so that the swing turns in direction up the stream,—whilst the centre in the case of the railway bridge is on the abutment, so that the swing turns down the stream. In the town bridge the moveable portion has six of the rivetted plate girders in the direction of the length,—the outside girders of the six being 7 feet 11½ inches deep, at one end, and 6 feet 0¼ inch at the other end,—the four intermediate girders being somewhat less. For the strutting, the girders are intersected by boiler plate—a row of plate passing by each side the centre pivot, for extra strength thereat—and elsewhere by cast-iron pipe-strutting, which gives the requisite strength with lightness. The footpath of this part of the bridge projects on cantilevers. The bearing-points are the pivot, formed with properly prepared iron and brass, and thirty wheels, or rollers, running on a circle, or roller path, 30 feet in diameter, which is accurately planed to a slight and even inclination,—the rollers being themselves fixed on the edge of what may be called a large horizontal wheel, which keeps them in their places. The motion is given to the bridge by an endless chain, stretched round the circle over the roller path, and also round a small toothed wheel,—which last is turned by two men, standing upon and carried with the bridge. The weight to be moved is over 300 tons. By a most ingenious contrivance, when the bridge is not open for river traffic, the weight can be taken off the central pivot.—At the outer end of the radius, there is, of course, a stop, to prevent forcing the bridge too far laterally in re-closing it,—and at the same end there are a number of "setting-up screws," to which motion is given by a windlass, for the purpose of taking off the weight which would otherwise exert great leverage upon the machinery; and there is here an horizontal stop, to prevent these screws from themselves forcing up the bridge too far. At the shorter end of the moving girders a considerable weight of stone is filled in the hollow parts under the level of the causeway, so as to get the proper counterbalance. Great nicety is of course required in the planning and arrangement of these swing bridges. Plans differing from that now adopted at Rochester have been tried,—and we believe here there was at one time a proposal

* See p. 422.

* See Mr. Hughes's paper, and "History and Antiquities of Rochester," compiled chiefly by the Rev. Samuel Denne, from Thorpe's "Registrum Roffense," Lambard, Stowe, and others. Published 1772, re-edited by Willash, 1817.

* Address by the late Ralph Bernal, Esq. at the opening meeting of the present year of the Archæological Association, at Rochester, *vide Builder* vol. XI. 185. In the same volume will be found other particulars of the antiquities of Rochester and the neighbourhood. At one of the meetings of the association, a long paper on the bridge by Mr. G. H. Adams, was read.

for having a reservoir of water in which a floating caisson should revolve. The contrivance now adopted seems to us to reflect great credit upon all concerned in scheming its working parts, and in carrying it out. In the railway-bridge a similar principle appears to be contemplated.

In the main portion of each bridge,—that is to say, town bridge and railway bridge—it has been shown that there are three openings and two piers. The railway bridge consists merely of wrought-iron rivetted girders, three in the width of the bridge, and continuous for the whole length of the piers and openings together. The centre girder is the deepest; and the three girders are fixed to one pier, whilst their other supports are by rollers, to allow of expansion and contraction. The timbers of the roadway are suspended from the bottom flange by two screw-bolts at each end,—this plan of course being adopted to ensure regular bearing, instead of the other alternative of straining one-half of the flange and outer girders. But it should be observed that the great dependence which in this now usual system is placed on the bolt-holes and heads of the bolts, would lead to the inference that further consideration of the subject might be desirable. This bridge is to carry the continuation of the North Kent line on to Canterbury; and great works are in progress in several parts, as about Chatham. Mr. Joseph Cubitt is the engineer of the railway bridge; Mr. Wm. Mills is the resident engineer; and Messrs. Fox and Henderson are the contractors.

The town bridge, of which, in addition to the general view, the centre and one of the side openings are shown geometrically, has three segmental arches of cast iron, and stone piers and abutments. The method adopted in the foundations here, and in the railway bridge, has excited so much attention, and involves so much ingenuity; and the question of foundations, both with reference to the method at Westminster-bridge, and generally, is now so interesting, that we propose shortly to return to the question,—to which time we defer a detailed description of the principle which appears to have been successfully carried out at Rochester. Let us remark, that the stone piers extend only down to the level of low water,—the pier, if it may be so called, below, being formed of a cluster of cylinder piles, filled with concrete,—there being fourteen piles to each pier, viz. six on each side and one to each of the cutwaters. These piles it was originally intended to sink on Dr. Potts's principle, or by exhausting the air, and allowing the pile to descend by its own weight. It was however found, in commencing at the Strood side, that the cylinder would not penetrate the bottom, and therefore a new contrivance, a modification of the diving-bell, was adopted for each cylinder, the air being compressed by an engine, so as to keep out the water, the pile descending by a weight placed at the top, and the men and materials passing in and out through valved chambers, according to an ingenious contrivance by Mr. Hughes, for which he obtained a patent. As in the instance of most valuable inventions, the priority of claim was disputed; and Mr. Bush, who commenced the sinking of a caisson, or cylinder, some time back on the Godwin Sands, has only just terminated his case,—which has been decided against him, in the House of Lords, mainly, as it would seem, because the real priority of claim would have been on the score of an invention by Lord Dundonald.

The strata at Rochester consisted of Kentish ragstone, gravel, soft chalk, and, lastly, in order of descent, hard chalk; and the cylinders were sunk in 9 feet lengths,—having to descend in some instances a total of 40 feet. The details of the work manifested great ingenuity.

Bed-plates were fixed on the top of the cylinders, and on these plates the masonry was laid. A portion of the pier corresponding with two courses of masonry, was formed by an iron curtain enclosing the piles, round the whole pier. After the foundations were completed, the works stood for some time before the superstructure was commenced. The total length of roadway, inclusive of the swing-bridge and abutments, is about 700 feet; but with the two approaches, and the land arches at the Strood end, the length would be somewhat greater. The girder framing of the swing-bridge measures about 99 feet along its sides, and 109 feet taking in the segments at each end. The length of the main portion of the bridge, or space of the three openings, is 482 feet, made up by the centre arch spanning 170 feet, two side arches, 140 feet each; and two piers, 16 feet each: and if the pier of the Rochester abutment, 40 feet, and the upper part of the pier only, next the swing-bridge, 34 feet, be added, we have a length of 556 feet for that part of the bridge. On the plan, the breadth between the parapets is 40 feet. The rise of the centre arch is 17 feet, and that of the side arches, 14 feet, or in each case, one-tenth.

There are six castings to the sweep of the centre arch and five to that of the side arches, and these castings are nutted and screwed together by flanges, the butting ends being carefully planed to get even bearing. On the plan there are eight of these arches in the breadth of the bridge, strutted by diagonal bracing-frames. The outside arches of the eight, in the 170 feet span, have the I form of section, 4 feet 6 inches in depth, with top and bottom flanges 14 inches by $2\frac{1}{2}$ inches, and a "web" of 2-inch metal. The inside arches are somewhat less in scantling. The decorative castings are screwed on, and, with the cornice and spandrils all in metal, and the iron parapet railing, are well designed for effect. At the upper angle of each spandril one inch is left for the expansion of the arch, which operates at that point, moving in direction towards the pier, in which a sinking is left to allow of such expansion. The arches spring from iron skewbacks, which pass through the pier,—that is, each arch where the piers occur butts against its neighbour.

The roadway and footpaths are carried by cast-iron plates fitted to the tops of the spandril castings. The roadway of the swing-bridge is of timber, where lightness is required.

The original contract provided for 2,500 tons of cast-iron, 35 tons of wrought-iron, 2,000 cube yards of brickwork in Portland cement, 850 cube yards of Portland cement concrete, 23,000 cubic feet of Bramley Fall stone in Portland cement, 9,000 superficial feet of 6-inch granite landings for foot paving, each stone 8 feet in length; 5,000 superficial feet of 6-inch York landings 4 feet in length, and 1,500 superficial yards of Scotch granite paving for the carriage-way, in regular courses 3 inches wide and 5 inches deep.

On the 10th June last, the three arches were all freed from their supporting centres,—when the drop of the crown of the middle arch did not exceed, even if it amounted to, one-eighth of an inch, and that of the side arches did not exceed one-sixteenth of an inch,—showing the excellence of the joinings of the ribs, and the soundness of the bedding on the skewbacks. Sir Wm. Cubitt is the engineer, and Mr. John Wright, the resident engineer. The foundations were put in by Messrs. Fox and Henderson, and the superstructure was contracted for by Messrs. Cochrane and Co.—Messrs. Lucas being sub-contractors for the masonry and brickwork.

At the landing-place on the Rochester side of the river, Mr. Wright is putting up what appears to be a well-contrived landing-stage. It is simply a hollow caisson, formed of rivetted plate-iron, and rises and falls in the direction of an inclined plane with the rise and fall of the tide,—being guided by wheels which run in chases in the masonry. Thus, descending a few steps, persons embarking can step immediately to a boat from a flat surface at all states of the tide. Some efficient contrivance has been long wanting at most of the landing-places on the Thames.

Of other improvements in Rochester, sanitary and otherwise, the necessity of which has been often remarked on in our pages, there is still much need. St. Nicholas's Cemetery, on the Maidstone-road, was opened not long ago, and comprises about three acres. Its formation and the chapels cost about 2,000*l.* but it does not appear to us that much taste has been exhibited in it.

The Archæological Institute.—The Congress has been held in Edinburgh: we shall give some particulars next week.

ON ORNAMENTAL LEAD-WORK.*

FLECHES.

The wooden flèche, or steeple, was one of the chief features of every cathedral in France, where we so seldom meet with the centre tower: Chartres formerly had two flèches, one in the usual place at the intersection of the transepts and the other between this last and the angel on the chevet. Its destination was to contain a bell, which was rung from inside, to warn the ringers in the great towers when to sound the great bells. There are still two beautiful flèches remaining at Rheims and Evereux:† the latter is pierced nearly all the way to the top. In fact, so solidly were these charming little edifices constructed, and so scientific was the application of the timber and the lead, that very few indeed have perished from the effects of time, compared with those destroyed by some disastrous fire; and yet in spite of this, it is proposed to put a roof and flèche of iron and zinc upon the restored cathedral of Cologne.

DORMERS, ETC.

The only thing now wanted to complete our roof, will be the dormers and air apertures. As to the former, it is simply an affair of covering the work of the carpenter with lead, with the addition of the cresting and girouette. They deserve notice, however, as it is on their recessed pediments, and on their sides, so well protected by the eaves, that the plumber applied his polychromy.

Of air apertures, there is a charming example at Beaune (fig. 10, p. 411, *ante*). It is in two pieces, the front one is cut out, beaten up, and soldered to that at the back, the flanges of which are inserted below the slates. It may best be described as a miniature dormer, entirely formed of lead, no wood being wanted to keep it in shape, as it is so very small.

At Lincoln, the lead of the gutter ‡ (which is relatively high up) is continued outside, over the stone parapet, where it is beaten up into an 8-foil ornament. I have been able to learn no particulars concerning this beyond the fact that part of it has lately been destroyed.

Water-pipes were a comparatively late invention, and can hardly be said to have been used in the Middle Ages: when, however, they did come into use, they were made ornamental, with colour and gilding.

POLYCHROMY.

The architect having thus finished his roof, which we may observe was an affair calculated to last for four or five centuries—not simply ninety-nine years more or less,—thought that as so much pains and expense had been taken to make it strong and beautiful, it was worth while to go a little farther, and give it all the advantages of colour. How was this to be carried out? Direct polychromy could only be used in the more protected parts; and oil gilding, although in some situations very effective, hardly contrasts sufficiently with the lead to make it desirable to employ it in large quantities, to say nothing of the excessive expense.

The problem was solved by the use of tin, whose imperishable brilliancy contrasted well with the dulness of the oxidized lead, and which being applied by fire, became part and parcel of the latter metal, and could neither be washed off by the rain, like the gilding, nor cracked by the sun like the oil painting.

The process of tinning is thus performed:—The lead being first of all covered with a tolerably thick coating of lamp-black and size, and the pattern traced with a point, all that part of the surface to be tinned is removed with a shave-hook, so as to leave it quite clean and bright: a little sweet oil is then rubbed over, and the solder applied and carefully spread with a copper bit in the usual manner. The process being thus effected, the next thing, of course, was to fix the lead in the position it was designed to occupy, for this tinning was done in the workshop, although occasionally it was performed when the lead had been up many years. Thus the spire of Notre Dame de Chalon, Chalon-sur-Marne (fig. 11) was probably constructed

* See p. 410, *ante*.

† The flèche at Evereux was repaired some few years back.

‡ In the Middle Ages, the gutters of a large church were generally so well constructed that it was unnecessary to line them with lead.

in the fourteenth century, but we must refer the tinning to at least a century later. In this case the process was the same, only much more tedious, as the workman was only able to apply so much tin as the end of his axe-bit would take up, and accordingly we find the work in the instance under consideration very coarse and rough, contrasting strongly with that on the dormer window at the east end of the same church (fig. 12).

All the lead-work of the roof was more or less susceptible of this decoration, but it was generally confined to the more ornate parts, such as the bases of the girouettes and dormer windows, but more especially to the ridge-pieces, which latter contrasted well with the long dark body of the roof, which was almost always left plain.* Almost all the principal mediæval edifices of France present more or less traces of this decoration, but I am not aware that any traces of it are to be found in England, although M. Durand who executed the lead-work for the Sainte Chapelle informed me that he had heard of some existing in England; he thought at Shrewsbury.

The places where gilding was applied are generally betrayed by the yellow or reddish colour mixed up with the oil formerly serving to attach the gold leaf,—now washed off by the weather in almost every instance,—however, the gilding has, in its turn, preserved the mordant, and we are thus enabled to detect its position. The large figures terminating the crests were formerly gilt, and, occasionally, the ridges. To such an extent was this practice carried on in the fifteenth century, that Charles IX. issued an edict, forbidding the inhabitants of towns to employ gilding on the exterior of their habitations.

It has been before observed, that the recessed pediments of the dormers, their sides (when protected by eaves), and other sheltered situations, received polychromatic decoration. The colours were not applied directly upon the lead, but upon a tinned surface, the lines alone being left to oxidize: the oil colours used upon the tinning were transparent, so that they might receive the full benefit of the brilliancy from underneath: these paintings were easy to restore, for their outline was unalterable. I should imagine the subject upon the cheeks of the dormer at Chalon-sur-Marne (fig. 12) to have been originally coloured, although only the tinning, and a few traces of the mordant of the gilding, remain. This supposition is rendered more likely from the relation of M. Barbar, an old inhabitant of the town, who told me that when a boy, at the beginning of this century, he lived close to the church, and that one night a piece of lead fell down from the roof into the yard, the which piece was enriched with a variety of positive colours, such as red, green, &c. The plumber to the hospital at Beaune also informs me, that traces of colour were found on the girouettes when under the process of restoration. According to his account the colour was thus distributed: the bases were painted in chevrons, in red (and tin); the stems had a ribband-pattern, the rondels were blue, and the ornaments gilt. At present the only perfect specimen of Polychromatic decoration upon lead I can refer to, is on the inside of the second stage of the Amiens spire.

WINDOW LEADS.

After covering the edifice, the next important employment of lead in ecclesiastical art will be found in the windows. Now, the old lead for this purpose was cast, not milled: it was also much narrower than the modern,† but contained, if anything, more metal: the consequences are, that much of it is good up to the present time, while our flat broad-milled window lead, having its grain broken by the milling, and presenting a very thin and very broad surface to the air, becomes rapidly deteriorated. At Beauvais I saw some lead, which was probably put up at the end of the last century quite in a state of oxidation; and at Tournay, where the whole of the immense windows of the choir have been filled with stained glass, a very large expense will have to be undergone, at no very distant period, to fresh lead them, as nothing better than the common cottage window lead has been employed. Theophilus, in his excellent Treatise (book ii. ch. 24, 25, 26) on the Arts of his Time, gives us a rather long description how these glazing leads were cast, two sorts of moulds being employed indifferently, viz. those in wood, or those in iron, of which the latter were, of course, preferred, on account of their superior durability: the lead was cast in pieces about a yard (ulna) long, and when wanted to be soldered together, the two pieces were anointed with wax, lead was rasped over the surface, and the tin applied with the soldering iron.

For the purposes of ventilation in domestic work it was customary to cast perforated leaden quarries. A specimen of these may be seen at the Architectural Museum, and another of a tracery pattern will be found engraved in the current number of the *Archæological Journal*.

FONTS.

Mr. Albert Way, in vol. vi. of the same publication, has enumerated no less than twenty-two leaden fonts as remaining in England: they are almost all referable to the Norman period, and present the same general features in the design, which consists for the most part of figures sealed within circular-headed arcades, with a band of foliage at the top and bottom of the composition: sometimes the figures are all the same, sometimes they alternate with scrolls, and sometimes a totally different arrangement was followed, as at Brookland, Kent, where there are two ranges of arcades, the lower containing the labours of the months, and the upper the signs of the zodiac.* At Llancaut and Tidenham, Derbyshire, are fonts both cast in the same mould. I suspect that in these fonts separate wood moulds of the arcades and figures were impressed on the sand,† and the whole cast flat, and subsequently bent into shape and soldered together. The finest lead font remaining is to be found at the cathedral of Mayence: it is of immense size, suitable for immersion: the date is the fourteenth century, and the ornaments consist of edge tracery and figures in relief.

In the museum at Amiens is a font which deserves particular notice, from the remarkable manner in which it is fabricated. All the ornaments, such as the tracery, the buttresses, the arch mould, label, and the figures can be detached by removing certain rivets: it in fact is treated exactly as if it were made of iron, not of lead.

COFFINS.

As our life begins with the font, so it ends with the coffin; and here we see the artists of the Middle Ages lavishing their pains and labour on an object which certainly stood the smallest possible chance of ever again being beheld. The ornaments on the coffins of the noblemen buried in the Temple Church are quite worthy of the golden period of art in which they were produced: they appear to me to have been executed much in the same manner as the ordinary lead fonts,‡ viz. by impressions of wooden moulds upon the sand, the sides, top, and bottom being cast separately, and then soldered. Some of the ornaments were formed by imprinting ropes in the sand, and the cist found at Lewes, containing the remains of Gundreda, the wife of Earl de Warren, was decorated with a lozenge pattern, cast from impressions of ropes.

Lead was also occasionally employed in filling up the incised lines of monumental slabs: there are several examples of this at Chalon-sur-Marne.§ But I must confess I do not see any advantage it affords over the dark cement generally used for the same object, for it is apt to oxidize, and if not continually swept gets indurated with dust, and ends in becoming almost the same colour as the stone itself.

Lead or pewter is also occasionally used instead of white enamel "argent" in armorial bearings, found on monumental brasses.

The joints of tracery, and other parts of the masonry where it was thought undesirable to wait for the setting of the mortar, are often found run with lead. This system obtains a good deal in France at the present day: for instance, the whole of the restored tracery in the triforium of Troyes Cathedral is set in lead. In some cases it cannot be said to be without its disadvantages, for in the chapter-house at Salisbury a very great many of the neckings of the columns of the arcades were found to be split off at the point where the hole had been drilled for the lead to run into.

Lead is occasionally found doing duty for carving in wood and stone, even during the Middle Ages. The practice is, I think, by no means to be recommended, and the less said about it the better.

LEAD FOR DOMESTIC USES.

There now remain a few words to be said upon lead and its alloys, as employed in the domestic life of the Middle Ages. When Etienne Borleau, in 1260, compiled his book of the trades of Paris, the workers in pewter were found sufficiently numerous to be divided into two companies, one called the "Potiers d'Estain," and the other the "Ouvriers de toutes menues Ouevres:" the former produced the pewter vessels so universally in use in the households of high and low, while the latter fabricated the mirrors, the pilgrims' tokens, the little bells for horse furniture, the charming little boxes* made of wood, and covered with perforated cast lead, the studs and ornaments for girdles, purses, &c.: in short, he was the jeweller of the poor.

In the latter part of the Middle Ages, the *potier d'étain*, or pewterer, became quite an artist, for the works of François Briot are sought after by collectors of the present day, with as much eagerness as those of Luca della Robbia: the latter in order to multiply his works, from a sculptor became a worker in clay; and the former, for similar reasons, quitted the profession of a goldsmith for that of a pewterer.

It is generally supposed that Briot's pewters are but proofs of his works in the precious metals, and that he never abandoned his former profession. In support of this, we are told that it was the custom of the goldsmiths to run proofs of their works in pewter, and that Cellini recommends the practice, and did the same thing. As regards the first argument, it is singular that we should have so many proofs (very often duplicates), of the works of Briot,† and none of his contemporaries; and as to Cellini, a reference to his work, "Trattati sopra l'orificiria," ch. xiii. will show that he only recommended sundry small ornaments (intended to be joined to repoussé work), to be modelled first in wax, then cast in lead, and finally cast in silver, for says he, "You can reduce the lead thinner than you can wax, and it will serve for another occasion." From the context it would appear that the articles cast were very small, and that the last intention of Cellini was to use them as an article of commerce.

We may, therefore, suppose that Briot, who was a contemporary of Cellini, was simply a "*potier d'étain*," but that he took the higher branch of it, viz. the manufacture of those pewter vessels which we find catalogued in the inventories as "*a façon d'argent*."

Few or none of the larger pewter vessels of the thirteenth, fourteenth, and fifteenth centuries have come down to us, beyond the half-decayed chalices and patens occasionally found in the tombs of ecclesiastics. The book of Etienne Boileau is quite sufficient to show that large quantities of them were manufactured: besides, we have the testimony of Theophilus, who gives a description as to how the ampullæ of tin were made (book iii. chaps. 87, 88, 89). No doubt the fusible quality of the material has been the cause of the deficiency; yet we can scarcely regret its being melted into such works as Briot and his contemporaries have left us.

There were two articles manufactured by the

* Specimens of patterns tinned upon lead are deposited at the Architectural Museum, Canon-row, where they can be seen. They are executed by Mr. Potter, of South Molton street.

† Mr. Winston, in his excellent work on Stained Glass, gives sections of ancient and modern window lead, side by side.

* There are casts of these in the Museum of the Archæological Institute.

† It is quite possible that they might have been moulded in wax, and cast like bronzes.

‡ These coffins have been published by Mr. Richardson, the sculptor. The casts from which Mr. Richardson's plates were taken are in the possession of Mr. Sasse, the architect.

§ One also in the church of St. Mary Redcliff, at Bristol, which has worn well.—Ed.

* An exquisite top of one of these little boxes, representing six of the labours of the year, is preserved in the British Museum, with a large collection of pilgrims' tokens, as well as of other little objects in lead, principally from the museum of Mr. Roach Smith.

† If they were only copies of gold and silver work, we should find engraving.

lesser pewterer, which call for some little notice. 1. The counters, or mereaux, which are supposed to have done duty instead of copper coinage. 2. The mirrors. These latter we are assured by Vincent de Beauvais * were made by pouring hot lead over glass, and it is just possible that such a method might succeed if the glass were kept up to a sufficiently high temperature. Whatever might have been the process, it is a certainty that glass mirrors, with lead applied behind them, were well known articles during the Middle Ages.†

From Theophilus (book i. ch. 32), we learn that manuscripts were ornamented by means of tin ground into powder, and applied with gum much in the same manner as we now use gold shell. A varnish composed of saffron completed the imitation of the more valuable metal. Tin was likewise beaten out, and used instead of gold leaf,—varnished, of course; but the most curious application of it was to form the ground of what the good monk calls a translucid picture. A surface covered with burnished tin-foil had a subject painted upon it, with transparent oil colours,—a procedure which I suspect was followed with regard to the blank windows painted in imitation of stained glass in the cathedral at Florence.

Thus we have seen, although in a very imperfect manner, how important a part even the vilest of the metals played during a period when art was universal, and applied to all the purposes of life. The history of a metal becomes, under these circumstances, the history of almost all the arts. At present, unfortunately, we have no distinctive art; and, although much might be written concerning the useful purposes to which lead and tin are applied, I am afraid the art-history would be very small indeed. However, within the last few years we are beginning to amend; and, indeed, it would be folly to despair of an age which can produce such a picture as the Huguenot of Mr. Millais.

W. Burges.

THE LILLE CATHEDRAL COMPETITION.

Notwithstanding the fairness with which this competition was conducted to a certain point, with such honourable results to England, the committee have not proved true to the belief they inspired. On the ground of "the exigencies of public opinion," and the necessity for having the directing mind on the spot, they have placed the selected design in the hands of a local architect, and have made their bow to the authors of it, Messrs. Clutton and Burges, in some letters which are admirable specimens of what one part of the United Kingdom would call "blarney;" first, too, getting from the authors explanations and suggestions as to various proposed modifications.

The objections to the employment of an English architect urged by the committee, must have been evident to them before the programme was issued, and if so, they had no right to challenge the architects of England to compete; knowing as they must do, that it is not for the sake of the premium that an artist enters the list, but for the honour and profit of carrying his design into execution. The defrauded architects will find little consolation in the promise conveyed to them on the part of the committee, that their original idea being carefully preserved in the modified plan, will attach their names "to the edifice about to be erected, and be the means of transmitting them from age to age to posterity, surrounded by a glorious aureole."

Considering it would be undignified to continue longer to urge their claims to carry out their own design, our countrymen have closed the correspondence. It will be a subject of deep regret to all who wish well to art, that this competition which, in the first instance bore promise of being conducted with all the chivalrous spirit of the thirteenth century, will form no brighter spot in the history of art in the nineteenth, than the long list of disappointing, if not disgraceful, competitions which have preceded it. The Lille committee have had more praise than usual for what they did right in the first instance, and should not escape universal castigation for their ultimate breach of faith. We understand that the Lady Chapel has been commenced.

* In the cup attributed to him in the Print-room of the British Museum (why is it kept in the Print-room?), only one piece appears to have been cast, it is that containing the three small kneeling figures: this was wanted to be stronger than the rest, as the screw immediately adjusts it.

† See M. de Laborde, "Emaux du Louvre," vol. ii. article "Vase."

MIDDLESEX INDUSTRIAL SCHOOLS COMPETITION.

Messrs. S. Smirke, P.C. Hardwick, and F. Pownall, who were commissioned by the magistrates to report on the designs sent in competition, pointed out seven, as the best, and showed, as we are told, various objections to each of these. The committee of magistrates put these aside, with one exception, and awarded the premiums as follows:—1st, to a design by Messrs. Aickin and Capes; the 2nd, to a design by Mr. Henderson (understood to be the steward of the Colney-Hatch Asylum); and the 3rd, to Mr. Moffatt, the last being one of the seven selected by the architectural referees. Further inquiry, however, showed the committee, it seems, that neither of these three designs was what they wanted; and they now have before them a design by Mr. C. Barry, which was neither one of the architect's seven, nor of their own three! Nothing, however, is yet settled.

After perusing this statement, readers will not be surprised to hear that we have received some strong remonstrances against the whole affair. It seems so strange a proceeding, indeed, that we shall wait to hear if the architectural referees have anything to say on the subject.

Many of the designs sent in were for prisons, we are told, rather than for schools, and in others ventilation, so important in a building intended to receive hundreds of children, was little thought of.

DEVIZES CORN-EXCHANGE COMPETITION.

Twenty-six sets of designs having been sent in for the proposed Corn-Exchange, two were selected, one by Mr. Phipps, of Bath, the other by Mr. Hill, of Leeds; and of these the former was chosen, and the premium, 20*l.* was voted to Mr. Phipps. No sooner, however, was this done, than some members of the committee entered into communication with the author of the second design, and at an ensuing meeting his plan was reproduced, with modifications; when the committee reversed their former decision, and passed a resolution in favour of Mr. Hill's design, leaving the premium in the hands of Mr. Phipps. The estimated cost of the selected design is 1,500*l.*

How much longer will architects degrade their art by submitting themselves to the caprice and ignorance of such tribunals. It used to be a belief that when things came to the worst, they would begin to mend; but we have been so long at what must surely be the worst as regards competitions, that we have lost faith in the maxim.

BASINGSTOKE CEMETERY COMPETITION.

At a meeting of the town council on Tuesday, the 22nd of July, thirteen designs and estimates for the new cemetery and buildings were considered, and ultimately the designs of Messrs. Poulton and Woodman, of Reading, were chosen. The chapels are in the decorated style of architecture, 30 or 40 feet in length, with steeples 70 feet high. The well-known ruins of the Holy Ghost Chapel will form the foreground of the whole. The second premium was awarded to Mr. W. C. Birch, of London.

NEW WESTMINSTER-BRIDGE.

The committee appointed in consequence of Messrs. Rendel and Simpson's observations on the scheme of the proposed bridge, and the desirability of proceeding with it, have made their report. They have "examined Messrs. Rendel and Simpson, and also Mr. Stephenson, Mr. Hawkshaw, and Mr. Fowler, all civil engineers. The two gentlemen last named were selected by Mr. Page, who was also examined.

A written statement has also been put in by Mr. Page, who also had every opportunity of suggesting such questions as he deemed fit to the witnesses."

The report goes on to say:—

"The evidence has satisfied your committee that the proposed piers are of strength amply sufficient to bear the weight proposed to be placed upon them; that the piers will be secure so long as the iron casting remains sound; that the iron casting can be replaced whenever it may decay or be destroyed; that such a mode of construction is less permanent and secure than granite piers, founded deep on the London clay by means of cofferdams; but it is less expensive, and can be carried out in a shorter period of time, and causes less obstruction to the navigation of the river.

The changes that have taken place in the bed of the river and in the flow and ebbing of the tides of late years ought to have due consideration before determining the mode of construction and the headway under the bridge.

The witnesses examined before your committee differed somewhat in opinion as to the amount of any probable future change in these respects.

The report of the Select Committee on Public Offices, presented to the House during the sitting of this committee, contemplating extensive changes in the immediate neighbourhood and approaches to Westminster-bridge, has been brought to the notice of your committee.

Your committee are of opinion that, subject to the consideration of responsible professional advice to be obtained by the First Commissioner of Works, as to the security of the old bridge, the further progress of the works of the new Westminster-bridge should remain suspended until the Government have had an opportunity of considering and deciding on the advice to be offered to Parliament upon this last subject, when the site of the new bridge might be reconsidered in connection with any general plan of alteration and improvement of the neighbourhood, as well as the all-important subject of the headway under the new bridge.

Your committee, finding that upwards of 50 000*l.* have been already expended, subject to the foregoing remarks, subject also to some of the modifications and alterations suggested by the witnesses, are of opinion that the plan proposed might have been carried out."

NOTES ON THE INTERIOR DECORATION OF ENGLISH HOUSES.*

In our last paper we mentioned that tapestry and other ornamental work had to a great extent disappeared after the reign of George I. and that amongst the masses the unsatisfactory though wholesome practice of whitewashing had supplied the place of more artistic matters. Engravings had fortunately to some extent come into use, and in a degree helped to supply the deficiency. There were also the framed portraits of this period painted in oil,—better by far in style than the common kind to be met with in publicans' parlours, at present.

The casts supplied by the Italians, who then as now wandered with them from place to place, were much admired, and we gave a sketch of a group of them a short time ago;† and it is a curious circumstance that the poll parrots, and painted cats, which thirty or forty years since were considered decent ornaments by people of tolerably good condition, although by them now repudiated, are reproduced and extensively sold amongst those whom art at the former time had not reached.

The effect of works of art placed familiarly in view is undoubtedly good, not only to the rising generation, but to those of mature years, who, though they may know nothing of art, cannot fail to be improved by the works of genius which daily front them in their breakfast and dining rooms. It may, therefore, be hailed as a fortunate era when Woollett, that famous English engraver whom no foreigner has yet equalled—Bartolozzi, and the man who combined with so much skill the functions of the moralist, painter, and engraver—diffused their works from one end of the kingdom to the other. The greater part of the engraved prints of this time were, however, too expensive to be common amongst the lower or middle classes.

No man in his generation did more to promote the distribution of works of art throughout English dwellings than William Hogarth, who was a Londoner, born in a court in the Old Bailey, and who in due time was apprenticed to a sort of general engraver in Doctors'-commons. Like other great men, Hogarth had difficulties to contend with, and liked, when by industry and application he had got into a good position, to speak of the times when, after a course of dinners with Duke Humphrey, he has, on the completion of a plate for the publisher, buckled on his sword, and marched to see the life in town; on such occasions no doubt gathering up part of the valuable knowledge of human nature which he afterwards so ably used.

* See p. 317, *ante*.

† See p. 306. The benefits which have resulted from the labours of the itinerant Italians, in the diffusion of taste in both art and music in this country, has not been sufficiently acknowledged.

With his skill as an artist, Hogarth combined no small amount of shrewd business habits, which caused his ability to be doubly useful to the community. At the sign of the "Golden Head," in Leicester-square, he for many years disposed of his works in a manner which will be understood by the following quotation from one of the prints of the day:—

"Mr. Hogarth is publishing, by subscription, a print representing the March to Finchley in the year 1746, engraved on a copper plate, 22 in. by 17, price 7s. 6d. Subscriptions are taken at the Golden Head, in Leicester Fields, till the 30th of this inst. and not longer, to the end that the engraving may not be retarded.

"Note.—Each print will be half-a-guinea after the subscription is over. In the subscription book are the particulars of a proposal whereby each subscriber of 3s. over and above the said 7s. 6d. for the print will, in consideration thereof, be entitled to a chance of having the original picture, which shall be delivered to the winning subscriber as soon as the engraving is finished."

The subscription-list was closed, 1,843 chances being subscribed for. Mr. Hogarth gave the remaining 167 chances to the Foundling Hospital, and the fortunate chance was 1,941, which belonged to the hospital. Mr. Hogarth the same night delivered the picture to the governors of the institution.

The following list will show more clearly the prices at which Hogarth distributed his works:—

The Distressed Poet, 3s; four etchings of different characters of heads in groups, viz.: Chorus of Singers, a Pleased Audience at a Play, Scholars at a Lecture, and Quacks in Consultation, price 6d. each; Morning, Noon, and Night, and a Company of Strolling Players, for one guinea.*

	£.	s.	d.
Six Harlot's Progress, at 14 guineas each	88	4	0
Eight Rake's Progress, at 22 guineas each	184	16	0
Morning, 20 guineas	21	0	0
Noon, 37 guineas	38	17	0
Night, 26 guineas	27	6	0
Strolling Players, 26 guineas	24	6	0
	£427	7	0

In 1751 Hogarth published two large prints, Beer-street and Gin-lane, at 1s. each; a number printed in better manner, 1s. 6d. each; also four prints on the subject of cruelty, price and size the same. Hogarth said:—"N.B. As the subject of these prints was calculated to reform some reigning vices peculiar to the lower classes of the people, in hopes to render them of more extensive use, the author has published them in the cheapest manner."

In addition to the good done by Hogarth by the production of his prints, both English art and artists were benefited by the exertions which he made to secure an enactment for the protection of the copyright of pictures and engravings.

In 1735, an Act of Parliament was passed, which to a considerable extent protected the engraved works of artists from piracy. In acknowledgment of this, Hogarth engraved a small emblematical device.

The passing of this Act caused the artist to proceed with renewed vigour with his works. This enactment did not, however, effectually protect Hogarth's works from piracy, and he allowed authentic copies of some of his prints to be made on a small scale, which were sold by the booksellers at 2s. 6d. the set.

Amongst the engravers of the last generation, whose works were much appreciated, was John Scott, who did also good service by the productions of some fine prints, large and small, of sporting subjects, which are still highly prized. The way in which this artist learned his art, is encouraging to young men who may have an instinctive feeling for art. Mr. Scott, when a lad, was apprenticed to a tallow-chandler at Newcastle-on-Tyne. By some chance he had seen an engraver at work, and was anxious to make an attempt to follow his example. He procured a graver, but could get no polished copper to work upon. This obstacle he overcame by beating out pennypieces, which he carefully prepared, and in course of time by practice acquired considerable skill, and eventually found his way to London, where for many years he was extensively employed.* Since the time of Bartolozzi, Hogarth, and Woollett, English engravers have, by the multiplication of good pictures, added much to the adornment of English houses.

Before the days of Thomas Bewick and his brother Robert, illustrated literature was by its high price confined almost entirely to the affluent. Most families had a folio Bible, in which were descriptive prints: these, however, were purchased by careful saving, at a great price. The course of these talented men was soon followed by several worthy examples, and wonderful indeed has been the increase in both knowledge and taste which has been caused by the plentiful and still increasing supply of cuts and engravings. Every lover of elegance and refinement, and all who have at heart the success of this nation, both in art and manufactures, must consider this result with satisfaction. The general advancement of taste must improve the designs of goods required for domestic and other purposes. In many instances manufacturers of good taste themselves are obliged, contrary to their will, to send into the market abominable things, because more likely to find purchasers than better works.

The introduction of stencilling, or *stabdashing*, as it used to be called, effected a lively change in a multitude of English dwellings; and many of the patterns worked on the prepared wall, although simple and unpretending, produced what was needed, namely, a broad and harmonious effect, which affords relief without intruding in patches upon the eye,—a fault of many of the papers used on walls at present. We will give an instance which first comes to our recollection. A small room, about 15 feet square—a size very common in London—is covered with a large florid and distinct pattern of Louis Quatorze style: four and a half of these ornaments reach to the ceiling, and six and a half from side to side; the flowing lines are of a very pale, sickly grey, with white catching lights, thrown out by a dark background of indigo. This destroys the beauty of the best prints, drawings, or pictures. The room, small as it is, is made to look much smaller; and the eye wanders without repose painfully from place to place.

We could give scores of instances of the bad taste shown in the choice of patterns on our walls. The difficulty would be to find many in which it is not.

In the choice of paper for the walls of rooms, it ought to be borne in mind that in most instances the covering of walls is only a background for prints, water-colour drawings, or paintings: rooms may be seen hung with valuable drawings, papered with the gayest coloured flowers. The force and beauty of works of art are completely destroyed by such a mounting. In addition to the bad choice of the paper, much damage is often done to prints and pictures, which now supply the place of the ancient tapestry, by the style of the frames.

Although the graceful care of women has a greater influence on the homes of England now than in the days of our Saxon ancestors, and during the Middle Ages, still the actual amount of female handiwork is comparatively small; the production of tapestry may be said to have died out with Miss Linwood, that persevering artistic needle woman. These works differed from the old wall coverings, and were endeavours to imitate paintings in oil, rather than to produce an effect suitable to the particular material.

Mr. Timbs tells us that Miss Linwood worked her first picture when 13 years old, and the last piece when she was 78. The designs were executed with fine crewels, dyed expressly for her, and were entirely drawn and embroidered by herself. In 1785 the pictures were exhibited to the royal family at Windsor; next in the Pantheon, Oxford-street; removed in 1798 to the Hanover Square-rooms, and then to Leicester-square. The collection consisted of sixty-four pictures, including a portrait of Miss Linwood, at 19, from a crayon painting by Russell; "Head of St. Peter" (Guido); "Woodman in a Storm" (Gainsborough), &c. The pictures were sold by auction by Christie and Manson, at Saville-house, April 23, 1846, when the "Judgment upon Cain," which occupied ten years working, sold for 64*l.* 1s.; the price of neither of the other pictures exceeding 40*l.*; the original, "Hubert and Arthur," by Northcote, sold for 38*l.* 17s. The entire sale did not realize 1,000*l.*

* The original picture of the Strolling Players was sold to Francis Beckford, Esq. for 27*l.* 6s. and by him returned in consequence of its high price; it was afterwards sold for the same sum to Mr. Ward, of Littleton.

* About this time it was fashionable, especially amongst sporting gentlemen, to wear buttons of large size, which were often beautifully engraved with original designs. Scott, Bewick, Hogarth, and other eminent engravers, engraved on this description of work, for which large prices were paid.

METROPOLITAN BOARD OF WORKS.

At a meeting held on the 29th of July, Mr. Thwaites in the chair, the motion proposed by Mr. Doulton, and seconded by Mr. Hows, as mentioned in our last,—

"That the engineer be directed to prepare a plan, section, and estimate, for extending the main outfall sewer on the southern side, to a point in Long Reach, below Erith, and so as to be discharged at and after high water only,"

was carried; the amendment thereon, proposed by Mr. Wright, and seconded by Mr. Wilkinson,

"That the engineer be instructed to report on the desirability of carrying the entire sewage of the metropolis by means of one large tunnel to Sea Reach,"

being lost.

An amendment proposed by Mr. Carpmael,

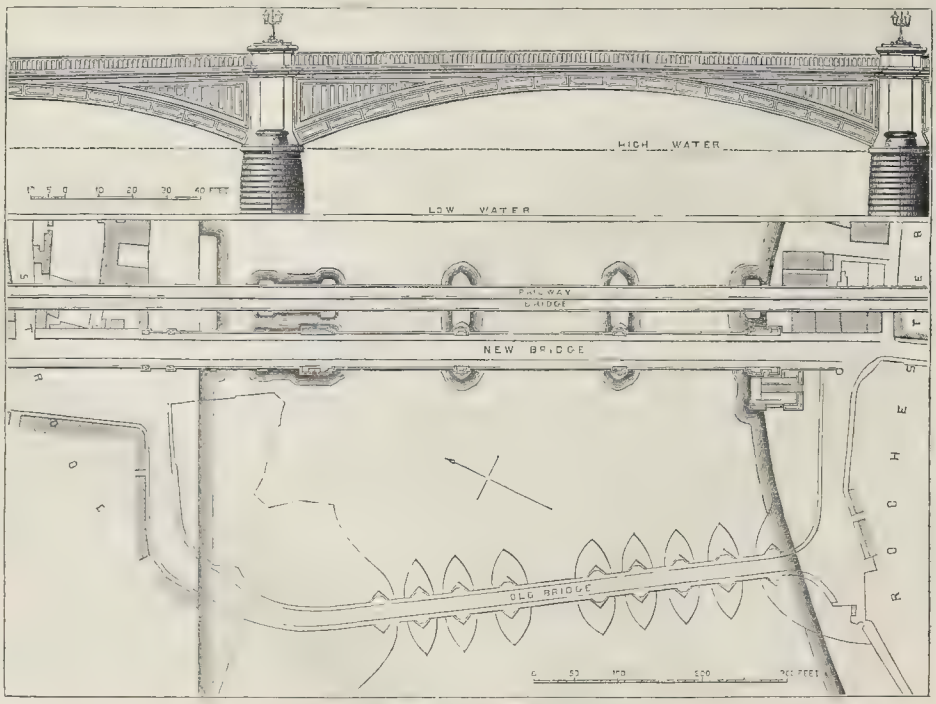
"That the plan recommended by the engineer in his report of the 7th of July, be now adopted, with the proviso that the sewage shall be discharged into the river within one hour after high water, so as to preclude the return of any part of it within the limits of the metropolis, as defined in the Metropolis Local Management Act,"

was withdrawn *pro tempore*, to be brought forward as a substantive motion hereafter.

Mr. Wright's motion,—

"That the low-level sewer, as delineated on the northern side of the metropolis, be adopted, subject to a variation from Hungerford to Loudon-bridge, in case the Thames embankment be carried out within such period as will enable this Board to comply with the requirements of the Metropolis Local Management Act,"

was carried by 21 for, to 7 against.



We confess ourselves quite unable to divine what the real views and intentions of the Board on the subject are, and we are forced to come to the inference that, feeling themselves incompetent to the task of draining and improving London,—no one could have expected they of themselves would be,—and having lost confidence in their engineer, if they ever had any, they are seeking a chance of escape in delay. The clear-headed portion of the Board cannot seriously believe that their present plan for the drainage of the northern side of the metropolis, with its erroneously-stated details, proposed outfall, and monster cesspool of thirty acres, will be carried into execution; and doubtless grieve in their hearts when they review the proceedings of the Board during the seven months it has been in existence. They must feel that up to this moment, however good its intentions may have been, the Board has simply proved an obstruction to improvements of all kinds: there has been no end of talk and no beginning of work. With the kindest possible feeling we would urge upon them the immediate and pressing necessity for an opposite course; at the same time, nevertheless, reminding them that in their case it would be better, so far as the public are concerned, even to continue doing nothing than to do wrong. We will venture upon this one prognostication, that if they persevere in their present plan of drainage, and go with it to the Chief Commissioner, the existence of the Board will be terminated on the re-assembling of Parliament. They must rescind what they have already done, and begin *de novo*.

The Cardiff Masons' Strike.—We have received a communication, signed "Mark Williams, Strike Secretary," to the effect, that the Cardiff strike is *not* virtually at an end. All we can say is, we are very sorry if it be not.

THE OLD BRIDGE AT ROCHESTER.

ROCHESTER NEW BRIDGE: ELEVATION OF PART.

Part showing position of the Old and the New Bridge.

ROCHESTER NEW BRIDGE.—Sir William Cubitt, Engineer.

[See p. 417, *ante*.

THE ANTIQUITIES OF THE CRIMEA, FROM THE LATEST OFFICIAL RUSSIAN SOURCES.*

It is now upwards of thirty years since private individuals, as well as the Russian Government, made excavations on both sides of the Kimmerian gulf and the interior of the shores of the Mœotis, amid the ruins of the old Hellenic and Miletus colonies. Among them, Pantikapœum (Kertch) occupied the first place. It was there where the deputies of all the surrounding nations assembled for the deliberation of public affairs, and it was thence that Grecian merchants extended their immense commerce beyond even the Cobi desert. It was at Pantikapœum that Herodotus collected his information relating to the uttermost countries north and east, whose caravans stopped at this first outpost of European civilization. Under such circumstances, it may be considered fortunate that many of the art-treasures successively found at Kertch were transferred to the Imperial collections of St. Petersburg. Still many specimens, too unwieldy for such a lengthy transport, were destroyed during the events of the last war. The chief objects of this kind, however, had been deposited in the new museum, which the late emperor was building for ten years, under the direction of M. Von Klenze, and there was an especial department devoted to this purpose by the architect.†

This work, published with the greatest typographic care, far excels every other description or delineation of Crimean antiquities; and it is to M. Piccard, the French artist, that the credit is due of so ably depicting these fine ornaments of Grecian art. Besides him, a Russian artist, M. Solatzeff, has figured the vases and other objects of clay, glass, wood, &c. The text is compiled by several members of the Imperial Russian Academy. The explanations of the Greek inscriptions are by M. Stephani, one of the conservators of the Museum of St. Petersburg.

It was about the year 1802, that some coins of Olgia, Theodosia, Pantikapœum, &c. were found in the Crimea; and in the year 1805, M. Koöhler described the mausoleum of Queen Camosarya. This monument, of the highest interest, has been destroyed, and it is also obvious that all similar buildings subsequently discovered were left to their fate, after the officers in charge of these excavations had removed every object of value. The drawings preserved of them in the work before us, show that these edifices were mostly built within the folds of those hills and mountains which cover the Crimea, and then became, as it were, hidden between them in the lapse of time. They consist mostly of vaults, built either in a circular or square shape, similar to buildings of this character found in Greece; the so-called *Thesaurus* of Agamemnon, at Mycene, having been entirely preserved. The square blocks of stone, very regularly cut, lap one above the other, and form an oval vault, the upper opening of which is closed by a stone, especially shaped for that purpose. Pausanias says, that by it *harmony* and completion were brought into the building.

Successively excavations increased from year to year; especially important were those of M. Dupru in 1816, M. Stempgrowski in 1831, and finally, M. Blaramberg, who was particularly successful in finding gold ornaments. Finally, these endeavours were crowned by the discovery of the great and splendid mausoleum of *Raoul-Oba* (mountain of cinders), which fully confirmed the belief that the highest specimens of Hellenic art existed on these shores, inhabited by Scythian barbarians. The Raoul-Oba monument was erected in the square form, and it would have been easy to preserve it by means of beams, &c. One glance convinced the searcher, that they had penetrated into the grave of one of the kings of Pantikapœum, as the skeletons of the king and queen lay there in all the array of ornaments which followed them to their last resting-place; diadems, neck-chains—all of the finest gold and workmanship—together with arms, vases, utensils and figures of amber, forming a mass sufficient to fill up a whole museum. But as no sentries had been placed around after its being opened, much of its contents was carried away and purloined. One of the hillocks now open, called *Aldem-Oba*, the Gold Mountain, shows by its name the fabulous amount of treasure found in these oldest lands of the Golden Fleece. The illustration of these ancient art-relics will occupy eighty-six large folio plates, and they follow according to the material of which they are made—gold, amber, ivory, silver, bronze, glass, burnt clay, vases and other figures, wood, besides inscriptions and coins. Of iron, there is a helmet of the most curious composition, unique in its way. Most interesting are the specimens of gold: diadems, crowns made of leaves, of which there are enumerated twenty-one; carvings of endless variety of human and animal form; neck-chains, agraffes, arm-chairs: most of these are ornamented with cut stones. Among them even shines forth the breast-covering of the queen, which consisted of several rows of ornaments: on its upper part appears a great medallion, representing Pallas Athene, which, as is duly observed, corresponds with the description given by Pausanias of the head of Pallas by Phidias in the Parthenon of Athens. It corresponds also with the *entaglio* of Aspasius, represented by Stosch in his famous work. If we take into account the high and pure style of these costly ornaments, we cannot doubt that they appertain to the best period of Greek art, and had been brought from Athens for the Royal house of Pantikapœum. The period alluded to is that of the end of the Peloponessan war and of Phidias, whose colossal toretic Palladion at the Athens Acropolis might have been the pattern of this imitation in a precious metal. We may observe that at that very time King Leukon, of Pantikapœum, was an ally of the Athenians, and had been honoured by the citizenship of Athens.

* "Antiquités du Bosphore Cimmérien." Antiquities of the Cimmerian Bosphorus, preserved in the Museum of the Hermitage. Published by order of His Majesty the Emperor. St Petersburg: Printed at the Printing-office of the Imperial Academy of Sciences. 1854. 3 vols. fol. Plates.

PROVINCIAL NEWS.

Saltash.—An accident, says the *Devonport Independent*, occurred, on Monday before last, to the cylinder in which the centre pier of the Saltash bridge is being built. For the convenience of the workmen, some of the stays had been removed from the internal part of the cylinder, and the upper part collapsed under the immense pressure from the force and weight of the tide. Fortunately no one was injured. A telegraphic message was sent off immediately to Mr. Brunel, the engineer. It also fortunately happens that the pier is 2 feet above low water-mark.

Tavistock.—The opening the new British Schools here took place on Saturday before last, in presence of the Duke and Duchess of Bedford, Lord John Russell, and others. The building is in the Old English style of architecture, and consists of three school-rooms, one appropriated to boys, a second to girls, and a third to infants of both sexes. The boys' room is 65 feet by 31 feet, the girls' 58 feet by 25 feet, and the infants' 50 feet by 25 feet, in addition to which large class-rooms and lavatories are attached to each school. Large playgrounds are also provided for recreation. Accommodation is thus afforded for about 650 children. The space of ground occupied by the building is 164 feet by 170 feet. The cost of the erection, defrayed by the Duke of Bedford, amounts to 3,000*l.* The schools were built by Mr. Goslin, of Torquay, on the design of Mr. Rundle, of Tavistock, architect; the plans had been previously approved of by Mr. Bowstead, one of her Majesty's inspectors of schools.

Worcester.—Mr. Hawksley's specifications for the water-supply and drainage works of this city were left at the town-clerk's office last week, for the inspection of persons wishing to tender, and applications from London, Glasgow, Staffordshire, Chester, Derbyshire, Worcester, and other places, have been made for particulars. Those connected with the water-supply are divided into three separate portions, one for the engines and works connected therewith, another for the iron pipes, and a third for laying down the pipes. They are voluminous, and being printed, form three books. The specifications for the drainage works and proposed forms of tender make two books of about thirty pages each. Altogether, there will be 15½ miles of drains and sewers to be laid down. Tenders are to be sent in by the 9th of August.

Baltsall Heath.—The foundation-stone of new schools for this district was laid on 17th ult. by Mr. W. F. Taylor, of Moseley-hall, on a site of land purchased for the building in Vincent-street. The schools are to be named St. Paul's, and will be erected by Mr. W. Smith, from designs by Mr. F. Empson. They will include boys' and girls' schools, each about 80 feet by 18 feet; an infants' school, 50 feet by 24 feet; three class-rooms, and a master's house. The main features of the design are Tudor, but the infant school gable will be pierced with a triple lancet. This gable will be surmounted by a bell turret. Each of the school-rooms will be open timber roofed. The material throughout will be brick, with stone dressings. The estimated cost is about 1,700*l.*

Saltley.—The building intended to be used as a public library and museum approaches completion. It is Venetian in character, and was designed by Mr. Street, of Oxford. A bazaar is intended to be held in August, in the Town-hall, to provide funds for the endowment and furnishing of the museum.

Birmingham.—The new museums at Queen's College are now nearly completed. On the site of the former edifice a suite of museums have been built, consisting of three rooms, each about 40 feet square. The first or lower room, which is 20 feet high, is entered from the quadrangle of the college: it is intended for anatomical preparations, and will have galleries on three sides, and be lighted by large mullioned windows, looking into the quadrangle. The second (or ground floor on the Paradise-street level) is similar to the lower museum, but of less height. It is intended for mechanical models and other objects connected with the engineering department, the professors in which will also use it as a lecture-room. The third, or upper museum, is the principal apartment, being 40 feet square, and about 40 feet high. It is surrounded by two tiers of galleries, and is lighted from the roof. This museum, which will be open to the public, is destined to receive the general collection of the college. The ceiling is divided by intersecting ribs into sixteen panels, with open tracery in each. The walls have piers projecting about 18 inches, and about 6 feet apart, running the whole height of the room. Between these piers are to be placed the glass cases for specimens, an arrangement which extends to all the museums. In front of each of the wall piers in the different museums pedestals will be placed to receive busts of eminent scientific men. The warming and ventilating are proposed to be carried out on the most complete system that can be adopted. The designs for the building were furnished by Mr. J. J. Bateman, the architect of the college. Further alterations and improvements to a considerable extent are contemplated. The cost of the new museums will be upwards of 2,000*l.* for which donations are still being solicited.

Lichfield.—The new schools erected in the village of Shenstone, were formally opened on 23rd inst. The schools are three in number, and are calculated to hold 130 children daily, and, together with a master's residence, are erected upon ground presented by Mr. T. Bagnall. The architect was Mr. W. Baker, of Birmingham; and the builder was Mr. T. Hassall, of Shenstone.

Lincoln.—Notwithstanding the great demand for houses in Lincoln, and the rapidity with which the same are being run up, building land, says the local *Chronicle*, is being brought into the market in such large quantities, that prices have receded to a point which enables all to purchase. Within the last few weeks, numerous lots, within a short distance of the centre of the city, have been sold at auction by Mr. R. Hall, at an average price of 5*s.* per square yard; and lots on the Conservative Land Society's estates were taken at 18*d.* a yard, and many lots in St. Botolph's have been sold at 2*s.* Building land in Newport can be had at 3*s.* per yard; and Above-hill, in the Bail, several houses are to be let. Building land, therefore, in Lincoln, can now be purchased at a reasonable rate, and it is

anticipated that an amount of building will shortly take place.

Shields.—It is said to have been determined by the Piers and Public Works Committee of the Commissioners of the river Tyne to submit to that board a project for going to Parliament next session to procure powers to make another new public dock on the river for shipment of coal. The site projected is the Coble Dene in Shields harbour; and, if made, it will be principally used in shipping steam coal from the Hartley coalfield. The Northumberland Dock, which is being made by the Commissioners for the same purpose, is making progress, and it is anticipated will be opened in the spring of 1857. When the works of the Jarrow Docks, which the North-Eastern Railway Company is making upon the Durham side of the Tyne, are finished, it is anticipated that facilities will be afforded for the shipment of above 3,000,000 tons of coal in the year. Those extensive marine works, the north and south piers at the mouth of the Tyne, which have been undertaken by the River Tyne Improvement Commissioners, are being proceeded with this summer. The public works now in hand upon the Tyne, and projected, are estimated at above 3,000,000*l.* sterling.

Kirkaldy.—The harbour repairs are proceeding, though slowly—men being rather scarce. Good masons are getting 5s. a day at the erection of Lochgelly Free Church. Mr. Russell, manufacturer, is rearing a mansion on his property adjoining Oswald's Wynd. Mr. Nairn, manufacturer, has also broken ground for a dwelling-house on the green flat of ground adjoining the harbour branch of the Edinburgh, Perth, and Dundee Railway Company.

Derry.—The construction of a new line of quays at Derry has been commenced by the contractor, Mr. William M'Cormick.

County Down.—A new Crown Court-house for Down is to be constructed in that portion of the Court-house at present occupied by the offices of the treasurer, clerk of the crown, and secretary, to be of the same size as the present Record Court; and new offices built in the rear. The present hall is to be increased in size, and to have a public staircase leading to the grand jury-room, secretary and county surveyor's offices, and the galleries of the Crown and Record Courts. The grand jury-room will occupy the same position as in the present building, but be increased in size, and have staircases leading to the Crown and Record Courts. A portion of these alterations will be proceeded with as soon as possible, in order that the courts, grand jury-room, and judges' rooms should be ready for occupation at the next assizes. The total cost of the alterations is estimated at about 4,000*l.*, 3,000*l.* of which are at present in the hands of the treasurer, and available for the purpose of the alterations.

MR. PENNETHORNE, ARCHITECT AND SURVEYOR OF H.M.'s PARKS, PALACES, AND PUBLIC BUILDINGS.

The following gratifying memorial has been addressed to Mr. Pennethorne by a large number of his professional brethren. We give publicity to it with great pleasure:—

London, 1st July, 1856.

Dear Sir,—Your professional brethren are anxious to congratulate you on the successful completion of your design for the western wing of Somerset-house, in which, at the same time that you have adhered to the taste and style of the original edifice, and have done full justice to the genius of Chambers, you have adapted these additions to a difficult site with great propriety, and thereby produced a striking architectural feature in the entrance to London by Waterloo-bridge.

We avail ourselves of this opportunity to express our sense of the ability with which you have treated various other public buildings, which you have been called upon to erect as an officer of the Crown, and carried out the metropolitan improvements confided to your management.

During a long professional career, many of us have had occasion to transact public business with you in your official capacity. On every occasion we have experienced from you the readiest access, as also the greatest courtesy and frankness. While every application has been met with all the facility that your office could afford, we have had to recognise the skill and intelligence which you have habitually brought to bear upon complicated and difficult questions of a technical nature, and the most anxious attention to protect the public interests in the very extensive purchases of property entrusted to your care.

Impressed with these feelings, we desire to offer you a mark of our cordial respect for your character as an architect and surveyor, and for your bearing as a gentleman; and understanding that the "Art-Union of London" have in preparation a medal of Sir William Chambers, with a representation of the Strand front of Somerset-house on the reverse, we have applied to the council of that body, and have received their consent to have an impression *struck in gold*, which, as soon as executed, we shall request you to accept, as a mark of the kindly feeling of regard borne to you personally by your professional brethren.

CHURCH-BUILDING NEWS.

Dorchester.—St. Peter's Church, which has been undergoing a process of restoration for the last eight or ten months, has been reopened. The subscriptions to begin with amounted to about 800*l.* The preparation of the necessary designs was entrusted to Mr. John Hicks, of Dorchester, under whose superintendence as architect the restoration has been carried out by Mr. John Wellspring, builder. The restoration includes the taking down the old east end, and the building of the new one, by which an addition is gained in length to the chancel of some few feet, and forming the eastern elevation, in the centre of which has been placed a traceried window, in common with the other characteristics of the edifice. This window is a gift of one or two private individuals. Carved heads of her Majesty and the Bishop finish the hood-moulding round the east window. The marble monument to Lord Holles, which once stood at the eastern extremity of the south chapel, thus blocking up the window therein, has been removed to the western extremity of the north aisle. The whole of the arches and piers have been made good with Caen stone, and the inside jambs, mullions, and tracery heads of the windows have been replaced by new ones in Bath stone, except where, in the chapels, they were of Hamhill stone, and have been replaced by similar material. The whole of the plastering has been removed and renewed, the ceilings whitened, the two semicircular and unecclesiastical dormer windows on the north and south of the nave, giving light to the old gallery (which is now removed), have been done away with, and the roofing continued. The chancel is raised one step above the church floor. The flooring is laid with Minton's encaustic tiles. The monuments throughout have been cleaned, and arranged uniformly between the windows, which have likewise been reglazed with new lead diamond lights, which portion of the work has been executed by Mr. W. Durden. The west or tower window is filled with stained glass, from Messrs. Bowden and Co.'s establishment, at Bristol, being the gift of Mr. Herbert Williams. The east window has been filled with stained glass, representing "The Ascension of our Lord," with emblematical figures in the tracery, by Mr. Hardman, of London. A new roof has been placed on the chancel, of a semicircular form, plastered between the ribs, which are stained in oak. The church has been refloored, and repewed with deal open benches, capable of accommodating upwards of 460 adults, about 200 being free. The old ringing floor has been taken down, and a new one placed over the crown of the tower arch, the underside forming a ceiling, which is stained and varnished. The organ is now placed in the north chapel, raised on a platform, and was removed, repaired, and refixed by Mr. H. Jones, organ builder, Brompton. The apparatus for warming the edifice consists of a Dorset stove, burning charcoal—the architect's invention—which has been placed in a reservoir under the pavement in the middle aisle, covered by an ornamental open ironwork plate, the draught of air being brought in by means of pipes under the floor, so that no room is lost in the church. Some other necessary works have been omitted for want of funds, and at least 500*l.* will be yet required to complete the restoration.

Warwick.—A new church has been opened in the parish of St. Nicholas, Warwick. The church, dedicated to All Saints, stands on a site presented by the Earl of Warwick. It is built in the Decorated style of architecture, and consists of nave, south aisle, chancel, south chancel aisle, and north and south transepts. A vestry is on the external north side of the chancel. On the western side of the south transept is the tower, the principal entrance to the interior, and intended to be hereafter surmounted by a spire. The interior, calculated to afford accommodation for 580 persons, is fitted with open benches, and the chancel with stalls. Two-thirds of the sittings are free. The walls are constructed of brick, with blue lias stone facing and moulded work. The tracery and other dressings, internal and external, are of Bath stone. The roofs are constructed of open framing of Memel timber, stained and varnished, and are covered externally with tiles. The architect was Mr. James Murray, of Coventry. The contract for the whole was 3,100*l.*

Hatfield Chase.—We are asked to state that Mr. Archer Houblon was a liberal donor in respect to the new churches to be erected at Hatfield Chase, and not the "builder" of them.

Eridge-green. — The chapel at Eridge-green, some time since built at the sole expense of the Earl of Abergavenny, was consecrated on Wednesday before last, by the Bishop of Chichester. A district of some extent, taken partly from the parish of Frant, and partly from the parish of Rotherfield, has been annexed to it by an order of council, and by the act of consecration it has become a district church by the name of the Holy Trinity. A burial ground for the use exclusively of the inhabitants of the district has been also given.

Birmingham.—A memorial window, designed by M. Alfred Gerente, of Paris, was some time since inserted in the eastern end of Holy Trinity Chapel, to the north of the altar. The corresponding window, south of the altar, has recently been filled with stained glass by the same artist, in memory of the late Mr. Isaac Marshall. The design consists of scenes from the life of the Saviour, enclosed within quatrefoil-shaped medallions, placed on a decorated floral ground. Amongst the scenes chosen are the Baptism, the Transfiguration, the Agony in the Garden, the Ascension, and the raising of Lazarus. In the head of the window is placed the Agnus Dei, and at the foot is an inscription setting forth the object of the memorial.

Magherafelt. — On St. Swithin's-day, the foundation stone of a new church, was laid in Magherafelt, according to the *Coleraine Chronicle*. The site was granted by the Salters' Company, together with the sum of 4,000*l.* to assist in the building. The work is progress-

ing under the superintendence of the contractors, Messrs. Henry and Sons. The edifice is to be named St. Swithin's Church.

Berwick-upon-Tweed.—The new burial-ground here has been consecrated by the Bishop of Manchester. The consecrated chapel is lighted by a five-lighted traceried window at the east end, three two-light windows on the south side, and one on the north. The unconsecrated chapel is lighted by seven traceried windows of varied design. Each chapel will accommodate about fifty persons. The buildings are all constructed of the local building stone, except the window tracery and finer portions of the work, which are from Swinton. The buildings and the laying out of the ground are from a plan furnished by Mr. Robert J. Johnson, of Newcastle, and selected from twenty-five plans submitted to the Burial Board.

LONDON AND MIDDLESEX ARCHÆOLOGICAL SOCIETY.

This society held its first annual general meeting on Thursday, 24th July, at the Architectural Museum, Canon-row. Lord Robert Grosvenor, M.P. occupied the chair in the morning, when it appeared from the balance-sheet that the total receipts, including a donation from Lord Londesborough of 20*l.* amounted to 202*l.* 3s. 6d.; the total expenditure was 108*l.* 12s. 3d. leaving a balance in hand of 93*l.* 11s. 3d. The members and visitors then adjourned in a body for the purpose of visiting Westminster Abbey, under the guidance of Mr. Scott and the Rev. Charles Boutell, M.A.

At eight o'clock the members and their friends again assembled in the Architectural Museum, where a *conversazione* was held; the Rev. Thomas Hugo in the chair.

The first paper read was by Dr. Bell, upon the royal badges which appear upon the royal monuments of the abbey. The second was by the Rev. Thomas Hugo, on the structures which preceded the present Abbey Church. A letter was then read from Mr. W. H. Cowper, upon some Roman remains which were discovered during the early portion of the spring in making some excavations at Mr. Hemming's Iron Works, at Bow (close to the line of the old Roman road).

THE METALS.

The iron trade as yet shows no tendency to an increased state of activity. "Considerable interest," says the *Wolverhampton Chronicle*, "is felt as to the propable course of the trade. Orders have not come in so freely as was expected, and stocks of pig-iron are increasing. Since the introduction of hot-blast the powers of production have vastly increased, when compared with former years. In 1750 the entire annual production was 75,000 tons; in 1800, 180,000 tons; in 1825, 600,000 tons; and in 1851, 2,500,000 tons: the production of the United Kingdom last year was 3,000,000 tons. The cessation of hostilities has at present left this enormous make without an adequate market. The consequence is that pig-iron has receded in price, and good mining pigs may now be quoted at 4*l.* 10s. per ton. The anticipations of the trade have not been realised as regards foreign orders, from America in particular. There have been none of any account for a considerable period. American dealers, no doubt, are holding off as long as they can, expecting a reduction in price."

Messrs. Fox and Henderson have undertaken the execution of public works in Sweden, which will require a considerable time for their completion.

The copper and brass manufactures continue in some degree disturbed by the recent reduction and present unsettled state of the price of copper. This suspense, according to the *Times*, is felt, however, more by the makers of the smaller descriptions of articles than by the large founders. The copper tubing and wire businesses are said to be brisk, and to be less influenced than could have been expected from so sudden a fall. The order for the brass boiler tubes for the monster steamship now building at Millwall has been given to Messrs. Everitt and Sons, of the Kingston works. The quantity required is from 30 to 40 tons.

Aris's Birmingham Gazette has published some forcible articles on the copper monopoly. The smelters' combination have, it appears, done just as they liked with the prices of copper. They have increased their share—the lion's share—for charges and profits from 9*l.* odds in 1843 to actually no less than 43*l.* in 1856 under the very same pretences! Well may they be able to come down 18*l.* 10s. per ton at a single stroke, as they lately did. Miners and manufacturers have hitherto been equally at their mercy, and the paper alluded to proposes to break up this unconscionable monopoly by means of a new company of smelters, under the Limited Liability Act. Have not the old smelters already had the fear of some such rivalry under the new Act in their eye, when they so unexpectedly and unaccountably reduced the price of copper recently from 126*l.* per ton down to 107*l.* 10s.? The gross amount of the fortunes realized of late years by the smelters, may be roughly guessed from the following statistics given in *Aris's Gazette*:—The total quantity of copper ore raised in Cornwall during the year from June 30, 1855, to June 30, 1856, was 209,305 tons, producing 13,274 tons 15 cwt. of fine copper. The amount of money produced by this quantity of ore was 1,283,639*l.* 8s. 6d.; the average price per ton was 6*l.* 2s. 6d.; the average produce 6⅜; the average standard 140*l.* The result of the Welsh copper produce differs considerably from that of Cornwall. The total quantity of ore raised was 46,481 tons; the quantity of fine copper produced 6,470 tons 11 cwt. the amount of money 698,418*l.* 6s.; the average produce per ton 13⅜, the average price paid to the miners, 15*l.* 0s. 6d.; and the average standard 124*l.* 2s. 6d. The total quantity of copper ore raised in both Wales and Cornwall was 255,785 tons, producing 19,745 tons of fine copper, costing 1,982,057*l.* 14s. 6d." It may be desirable, adds the same authority, to inform persons not conversant with trade terms, that the meaning of the word "standard," so constantly used in connection with copper, is this:—It denotes the estimated value of the fine copper per ton, considered, from the various assays, to be in the ores sold; less a fixed sum per ton, namely 2*l.* 15s. which is deducted for the cost of smelting. [The actual outlay of the smelters, we presume, on which they base their superstructure of "charges."] Since the improvements in obtaining the pure metal from the ores on the large scale are greater than the assays would show, copper is now usually sold under the standard, which fluctuates considerably, and is really, for general purposes, a very fallacious guide to the value of the metal.

PREVENTIVE SYSTEM AGAINST INUNDATIONS IN FRANCE.

In an able and business-like letter to M. Rouher, the French Minister of Public Works, the Emperor treats of the late inundations, and suggests preventive measures to render their future recurrence less likely. No claim to originality is made; the principal sources of the suggestions, on the contrary, being clearly indicated; only the Emperor, in elucidating these principles, with the aid of common sense, shows his determination that what had heretofore only been talked of, and in a fragmentary way, shall now be done, and on a great and effective scale.

The letter thus broaches the subject:—

"Monsieur le Ministre,—After having examined with you the ravages caused by the inundations, my first object of consideration has been to find the means for preventing similar disasters. According to what I saw, there are in the greatest number of the localities secondary works, indicated by the nature of the ground, and which skilful engineers might readily execute. * * * * But as to a general system to be adopted in order to protect for the future, from such terrible scourges, our rich valleys traversed by large rivers, that is still wanting, and must be absolutely and immediately found.

"At the present time every one calls for a dyke, being satisfied with diverting the water from himself and throwing it on his neighbour. The system of dykes is only a palliative, ruinous for the state, and imperfect for the interests to be protected; for, in general, the sand which is brought down constantly elevating the bed of the rivers, and the dykes tending to narrow them, it is necessary to be constantly adding to the height of those dykes, to be prolonging them along both banks, and to subject them to a constant superintendence."

The Emperor then proceeds to point out the cause of such inundations to be chiefly mountain rains.

"Everything, therefore," he continues, "consists in retarding the running off of the water. The means of effecting this is to erect on all the tributary streams of rivers, at the mouths of the valleys, weirs, leaving in the centre only a narrow passage for the waters, and thus keeping them back when their volume increases, and forming reservoirs which could only empty themselves slowly. It is necessary to do on a small scale what nature has done on a large one. If the lake of Constance and the lake of Geneva did not exist, the valley of the Rhine and that of the Rhone would only form two vast sheets of water."

After entering more minutely into the details of the system suggested, the emperor gives orders that it shall be forthwith examined on the spot, with a view to its being carried into effect without loss of time, attention being also drawn to special works requisite at various points along the route of the late inundation, as at Lyons, &c., and a wish expressed that in the promotion of engineers regard shall be had to their previous local experience, so that the state may not lose the advantage of such special knowledge by promotion to or employment in other services in which it would be of little or no avail.

What about the bridges?

RIPLEY'S HOSPITAL, LANCASTER.

The first stone of this new hospital was laid by the Bishop of Manchester, assisted by the Bishop of Chester and a numerous body of clergy.

The late Mr. Thomas Ripley, of Liverpool, had often expressed his desire to bestow some lasting memorial of his regard for Lancaster, and after his decease, his widow, Mrs. Ripley, resolved to devote a considerable share of her means in carrying out the expressed wish of her husband, who appears to have had in view the endowment of an hospital; and it is in pursuance of this resolution that the foundation has now been laid of a new hospital at Lancaster.

The site is about a quarter of a mile from the town. The building is to be in the Early Pointed style.

The plan is somewhat in the form of the Roman capital letter E, *i.e.* with a side and two wings. It fronts the north-west, the centre line of the building being through the centre of John o'Gaunt's Tower in the castle. The side between the wings is 195 feet in length, and is divided into three equal spaces by a bold projection in the centre, which rises to the height of four stories (68 feet). The two side spaces rise to the height of three stories (60 feet). In the centre division of the side is the principal entrance and staircase leading to the committee-room, upper hall, matron's room, and waiting-room; and in the top story is the infirmary, nurse's room, &c. At the back are the kitchen offices, three stories high (45 feet). Over the infirmary, in the middle of the front projection, rises a clock-tower, 18 feet square, and 98 feet high, pierced with three tall lancet lights on each side. At the north-west angle of the tower is an octagonal turret, with spiral stair. The two side spaces and adjoining wings are respectively appropriated—the one to boys and the other to girls—having each their separated play-rooms and grounds. From the centre projection on each side to the wings extend arched or cloistered corridors, communicating with the wings and side divisions by broad stone stairs. The wings on each side are 130 feet long, each four stories high (68 feet), and are terminated at the north-west extremities by houses, one for the schoolmaster on the boys' side, and the other for the schoolmistress on the girls' side. The two wings are each calculated to contain fifty children, making thereby for each division of the building accommodation for 150 boys and 150 girls, or 300 altogether. The material chosen for the exterior of the building is white sandstone from adjacent quarries. The spaces between the hewn parts are to be filled in with inserted rubble. The architect is Mr. J. Cunningham, of Liverpool, and the contractor is Mr. Charles Blades, of Lancaster. The estimated cost is nearly 25,000*l.*

THE VENTILATION OF ALL BUILDINGS.

It is a disgrace to the boasted civilization of our age, that ventilation has not been made imperative on landlords in all rooms, whether inhabited or not. How many human beings have wasted their lives in sickness, to a great extent from inhaling foul and unwholesome air (aided, it is true, by the shopkeeping poisoners and adulterators), we may not be able to learn; but if it could be got at, I believe the numbers would be found to be enormous. Thousands of men, women, and children are compelled by stern necessity to live, eat, and sleep in one apartment—the only means by which they can get fresh air being by the doors or windows: these are both liable to objections, especially in winter time, as too large a volume of cold air is admitted by these means; and in summer it is nearly as bad, especially if the weather be wet or windy. Ventilators made of *iron*, and on the same principle as those used by publicans to carry off the smoke of tobacco, are simple, and would be found, it is believed, efficacious; such as the perforated discs or plates, one sliding over the other, to cover the apertures when deemed necessary. No apartment in any house should be without them. Cellars, also, would be free from mephitic vapours and noisome smells, which often enter the dwellings to which they are attached.

Pure air (or as pure as we can get it in large towns like London, &c.), is as necessary as the light. The sluggishness with which many of us arise from our beds to perform the avocations of life, tell plainly enough the ill effects, in most instances. He among our representatives who shall introduce a Bill into Parliament to make their introduction impera-

tive, and liable to fine if omitted, would deserve and receive the grateful thanks of many a poor artisan who may, with his wife and several children, be the occupants of *one* apartment. I humbly suggest that it would be preferable that they should open into the open air direct, and *not* through the chimney, for obvious reasons, one of which is, that should the smoke be driven down by high winds, the apartment would be filled with smoke if they communicated with the chimney; and if they opened direct into the atmosphere, one perforated plate would probably be sufficient. Two ventilators, one placed above the other, would be better still, the upper one for the egress of the rarefied air, and the lower for the entrance of fresh air. YOUNG ENGINEER.

CONSOLIDATION OF THE PUBLIC OFFICES.

THE following is a summary of the proposals contained in Sir C. E. Trevelyan's evidence relative to the consolidation of the public offices:—

"That a building be erected between the Banqueting-house and the river for the War Department (including the head-quarter offices at the Horse Guards), according to Inigo Jones's designs for Whitehall Palace, or an adaptation of them, having one face towards the Houses of Parliament, another towards Charing-cross, and a third towards the river.

That the Horse Guards and Lady Dover's house be then removed, in order that Whitehall Palace may be opened to St. James's-park, and that St. James's-park may be extended, on either side of Whitehall-Palace, to the Thames.

That the Somerset-house and Whitehall branches of the Admiralty be brought together in a block of buildings to be constructed between the site of the Horse Guards and Charing-cross, in extension of the existing Admiralty, having one face towards the street and another towards the park; and that the houses in Spring-gardens be removed, and an opening made between St. James's-park and Charing-cross.

That the existing line of the public offices be extended from the corner of Downing-street to the corner of Great George-street, forming one side of a spacious square, the other sides of which would be towards the Abbey, the park, and the Admiralty.

That the civil departments of the Government be accommodated in this square, with their dependent offices grouped around them. Thus, the General Pay Office and the superintending establishments of the different branches of the public revenue would be brought into immediate connection with the Treasury; the Chief Secretary for Ireland, the Lord Advocate of Scotland, the Board of Health, the Convict Department, and the Inspectors of Prisons, Mines, and Factories, with the Secretary of State for the Home Department, and so forth.

That the space between the line of civil offices and the river, and between her Majesty's ancient palace of Westminster and Whitehall-palace, be then cleared of buildings.

That Somerset-house, which would be left tenantless by these arrangements, be re-appropriated as may be most for the public advantage. If it should be determined to make provision for the courts of law (including the Court of Chancery, and the Ecclesiastical, Testamentary, and Admiralty jurisdictions), at Somerset-house, it might be done out of the surplus unsued legal deposit funds, and the existing buildings at Somerset-house, would furnish accommodation for the various legal offices, including the registries of wills, judgments, &c.

That, in order to bring the Houses of Parliament and the public offices into immediate connection with the courts and inns of law, and with the City, and to relieve the existing overcrowded thoroughfares, a railway be constructed, according to the most approved arrangements, along the river-bank from Westminster to the City, in connection with the works for purifying and embanking the Thames; and that the most ready means of communication by electric telegraph be established between the courts of law and the inns of law and Houses of Parliament.

That a committee be appointed, consisting of persons carefully selected as best qualified on account of their experience and ability, to advise the First Commissioner of Works and the Government in respect to—

1. The relative situation of the different offices.
2. The order of time in which they should be built, the precedence being given to the War Department and the Foreign Office; and
3. The most convenient interior arrangements for the several offices, and

That the following steps be taken in reference to all the new buildings:—

First. That general specifications of the several buildings be published, and the architects of every country be invited to send in plans and elevations.

Secondly. That when received, these designs be exposed for a sufficient time to public view, and that the selection be made after full discussion and mature deliberation.

Thirdly. That when the plans and elevations have been resolved upon, detailed specifications and working drawings be prepared, in order that the construction of the buildings may be put up to competition in suitable portions; and

Lastly. That everything connected with this undertaking be done upon the sole personal responsibility of the First Commissioner of Works acting under the Executive Government; early and full information relating to every important step being submitted to Parliament."

Notices of Books.

Practical Astronomy, Navigation, Nautical Astronomy, and Meteorology. By various Authors. Houlston and Stoneman, Paternoster-row; and Orr and Co. Amen-corner. 1856.

THIS really extraordinary five-and-sixpence worth of useful knowledge consists of the several treatises named, which originally appeared in a serial form as part of "Orr's Circle of the Sciences." The authors are Mr. J. R. Young, late professor of mathematics in Belfast College; Mr. Hugh Breen, of the Royal Observatory, Greenwich; Mr. J. Scoffern, M.B.; and Mr. E. J. Lowe, F.R.A.S. of the Highfield House and Beeston Observatories,—all competent men.

The volume is plentifully illustrated, and each treatise is actually worth the price of the whole, were it not that the paper is, perhaps, rather thin; but how can it be otherwise at such a price?

In dipping into the several treatises here and there, the graphic and familiar illustrations of the expansion of iron by heat happen to suggest an idea which it may be worth while to note here, though with no critical view as regards the book itself. Various attempts are being made to "supersede steam" by means of still rarer or more expansive vapours, such as ether, chloroform, &c. as well as by other forces, such as the hydraulic. Did it ever occur to any one to try the other end of the scale of physical substance, and in place of vapours, gases, or fluids, to consider what might be done with solids as a source of power, at least applicable to some purpose or other? Iron, when heated, expands both in length and thickness, and in cooling again, contracts and shortens with a force of immense and irresistible intensity. Could not this force be put into the harness of machinery, and by the aid of levers, great wheels and small ones, cranks and spindles, be compelled to work for humanity? It is easy to see that there are some difficulties in the way of making such a force available, but cannot these difficulties be overcome by some ingenious device or other? This is to be noted, that the *modus operandi* of such a force is, more than any other, analagous to the operation of that animal power—that muscular force of contraction—with which the great Author of all endows the living machinery or mechanism of his own wondrous works. It is even now believed by physiologists that the exercise of the muscular force consists simply in the cutting off from the muscle of that nervous stimulus (or rather we should say of that nervous expansive force, analogous to heat itself) which keeps the muscle relaxed, leaving a mere physical contractile force to operate in its absence, through an internal organism beautifully adapted for facility of action, and hence to contract the muscle, and move the levers of the limbs to practical purposes. The restoration of great walls to the perpendicular is not the only *purpose* to which the contractile force of cooling iron might be put.

VARIORUM.

A SHILLING PAMPHLET "On the Introduction and Progress of the Screw Propeller, with Statistics of the Comparative Economy of Screw Ships and Paddle Vessels for Her Majesty's Service," &c. has been published by Messrs. Longman and Co. It consists mainly of a reprint of various forcible articles on the title of Mr. Smith to be regarded as the introducer of the screw,—a title which, as we have before said, cannot well be disputed. The question of its invention is one which cannot be so easily settled. We have shown that even Watt, though he suggested its adoption in ships, was not the originator of such an adaptation, the Chinese having from time immemorial applied the screw to the propulsion of vessels. Of course, facts such as these do not in the least diminish the merit of the Middlesex farmer as the introducer of the screw into the navigation of European and American nations. It was only by the utmost pertinacity and exertion that Mr. Smith succeeded, and no man we know of can lay claim to a prior and successful exercise of such endeavours. The Government have recognised Mr. Smith's claim in rather a shabby way by according him a pension of 200*l.* a year; but it is to be hoped this is not all he will eventually gain by the sacrifices and the exertions he has made for the service of his fellow-men. ——Wilson, of the Royal Exchange, London, has issued a sort of blue book, titled the "Principles of Railway Construction analyzed in reference to their Financial Effects on Shareholders, and on British and Indian Interests." It is, in fact, a report by Lieutenant-Colonel J. P. Kennedy, as engineer in chief and managing director of the Bombay, Baroda, and Central India Railway Company, to his constituents, on the principles and procedure which ought to be adopted (as well as on those which have been adopted), in reference to the introduction of railways into India; and it contains a great deal of valuable and useful matter. "The object, from first to last, of this paper," says the author, "is not to impugn rights, or criticise measures, but to investigate principles at the outset of a most extensive expenditure, with a view to avoid in India those grievous failures that have so generally characterized a like expenditure in England." One chief modification of ordinary principles in the introduction of railways into India, he urges, should be that the remuneration of directors and professional advisers or executive officers ought in part to be dependent on the success of their operations. The absence of this principle in England goes far, he thinks, to account for the numerous failures that have occurred. The reporter, we may add, contemplates an extensive use of iron instead of wood, as for sleepers, viaducts, &c. and he estimates the probable cost of the new lines at 4,369*l.* to 6,000*l.* only a mile.——A small volume on "The Language of Specifications of Letters Patent for Inventions," with authorities and decisions in recent cases of importance, by Mr. John Macgregor, of the Inner Temple, barrister-at-law, has been published by Benning and Co. of 43, Fleet-street, law booksellers. No inventor or intending patentee should be without such a work as this while considering how he ought to describe his invention, so as safely to steer through all the subtleties and quibbles of the law in preparing his specifications of patent. No patent agent can be a sufficient substitute for such a work to an inventor, for it is impossible that any patent agent can have the substance of what is here presented, condensed and pithy though it be, at his tongue tip or fingers' end, so as to guard his client against every flaw in those descriptions, qualifications, claims, and disclaimers which the inventor must first of all provide his agent with: a conscientious agent, indeed, would rather, we should think, advise his client to study well just such a work as that under notice before he submitted his invention to him either verbally or in writing.

Miscellanea.

ST. LEONARD'S, SHOREDITCH.—The interior of St. Leonard's Church, Shoreditch, has been restored, under the superintendence of Mr. Kneightly: the painting and decorative works were executed by Mr. Kuckuch, and are just completed. The church was re-opened for divine service on the 20th ult.

OUR GRAVEYARDS.—In the *Builder* of July 26, you have an engraving of the stowing away of gravestones at Golden-lane Burying-ground. You might have had a sketch some days ago of a similar stowage away at Tottenham-court-road Burying-ground, but now it is too late, for a few nights since, after dark, the stowage was cleared out, and the stones carried off, to where?—and echo asks where? Such shameful deeds ought to receive a world-wide exposure.

AN INHABITANT OF MARYLEBONE.

Australian Workmen.—The workmen employed on the Sydney Railway have just presented the contractor, Mr. W. Randle, with a vase of pure Australian gold (20 carats), weighing 80 ounces, as a testimonial of their esteem for him as an employer. This magnificent present cost the workmen 700 guineas. It is 17½ inches high.

The Warm-water Apparatus by which England is warmed.—A review compares the way in which the north-western parts of Europe are warmed by the Gulf stream to the method of warming buildings by hot-water, and calls the Torrid Zone the furnace, the Caribbean Sea and the Gulf of Mexico the boilers, the Gulf stream the conducting pipe, the great hot-air chamber being from the banks of Newfoundland to the shores of Europe, whence the heat is taken up by the prevailing west winds. Owing to the influence of the Gulf stream, Ireland is clothed in robes of evergreen grass; while, on the American shore, in the same latitude, is the frost-bound coast of Labrador. The port of Liverpool has never been closed with ice in the severest winter. The Laplander cultivates barley in a latitude which, in every other part of the world, is doomed to sterility. Were the Isthmus of Panama broken through by some convulsion of nature, and the Gulf of Mexico no longer a gulf, the equatorial current of the Atlantic passing through into the Pacific instead of being reflected back to England, Britain, as the writer remarks, might then become a Labrador, and would cease to be the seat of a numerous and powerful people.

Manchester Exhibition of Art Treasures.—In a circular recently issued by the Executive Committee, they say,—"Our design is to exhibit in one building not only examples of the chief works of all the great masters of painting and sculpture, both of the ancient and modern schools, but specimens of artistic excellence or of antiquarian interest, illustrative of the past and present state of art in every quarter of the world; and we contemplate the compilation of a catalogue which will leave a permanent record, useful alike to the artist and to the patron of art, and interesting to every observer of the intellectual progress and refinement of nations." And they make a strong appeal to all who can assist them in their object. The committee would find an advantage in connecting with their undertaking the names of some few men known to have a knowledge of art.

Metropolis Act Amendment Bill.—This Bill, as sent down from the House of Lords to the Commons, provides, by clause 1, That in parishes where church rates were made in any open vestry, or in any meeting in the nature of an open vestry, such power shall be exercised in the same manner as before the passing of the Act of 1855. Clause 2 provides that nothing in this Act, or in the Act of 1855, shall affect vestries created for ecclesiastical purposes only. Clause 3. Other duties performed by vestries shall be performed by the new vestries, created under the Act of last session. The election of such vestries remains untouched, and remains the same as provided by Hobhouse's Act, and the Act of 1855. Clauses 4, 5, and 6, provide that compound householders may vote. Clause 7. The payment of parochial rates as a qualification for voting, shall not be taken to include church rates. Clause 8 provides that the qualification of vestryman shall be determined by "the rateable value" of his premises, and not by "the gross estimated rental." Clause 9 regulates the calling of meetings of vestries, and simplifies the mode of so doing. Clause 10 enables the Metropolitan Board of Works to make application to parliament for the purpose of providing places of recreation for the public, and removes doubts as to the power of purchasing such places as Hampstead Heath, &c. Clause 11 enables district boards and vestries to take land by gift or agreement. Clause 12. The Act of last session and the Act of this session shall be construed as one Act.

Edinburgh.—Extensive alterations in connection with the Advocates' Library at the Parliament-house, Edinburgh, have been for some time in contemplation, and have just been approved by the faculty of advocates or barristers. The plans were originally prepared by Mr. Playfair, and have been adapted to existing circumstances by Mr. Matheson, of Her Majesty's Works: operations for carrying them out are to be immediately commenced. These alterations and additions consist mainly in extending the corridor library by the removal of the wooden enclosures at its eastern end, and in the removal and reconstruction of the law library adjoining. The corridor will thus be lengthened to about one hundred and twenty feet, and extend to the great hall of the Parliament-house, from which it will have a direct and suitable entrance. The law library will be entirely reconstructed, partly on its present site, and partly on that of the lock-up house, which is about to be removed. The library will be about fifty feet long and forty in breadth, and will be lighted by large oriel windows, and from the roof.

Society of Arts.—Election of Assistant Secretary.—There were 100 candidates for the office of assistant secretary. To reduce this number the council appointed a committee (on which no examiner was placed) to investigate the antecedents and claims of the various candidates. This committee reported the names of 16 gentlemen as fitting candidates for the office. The candidates were examined by a committee of examiners, chiefly professors from King's College, who returned the names of the five following gentlemen as having acquitted themselves the best in the trial—Edward Holmes, Charles Critchett, equal; M. H. Wilkin, Dr. Henry, J. P. Bidlake. The council have elected Mr. Critchett to the office.

North Oxfordshire Archæological Society.—A meeting of this Society was held at the Mechanics' Institute on Tuesday in last week. Although during the last twelve months the Society has been in abeyance, and consequently inoperative, excepting getting out the volume of Transactions, which has just been issued, it was resolved, that the excursion should take place in the week beginning on the 20th of August, if the secretaries find that arrangements to that effect can be made.

Exeter Diocesan Architectural Society.—A meeting of the Plymouth Committee of this Society was held last week, the Rev. W. J. Coppard in the chair. A paper, by Mr. Charles Spence, on the ancient chapel of St. Nicholas, on Rame Head, was read. The next excursion meeting of the society was fixed for Tuesday, 29th July, when many members of the society from Exeter were expected to join the local committee in visiting the new churches at Devonport, the Keyham Docks, Buckland Monachorum church and abbey.

The Salford Baths and Washhouses.—The baths and laundries at Salford are far advanced towards completion. They are situated in Collier-street, Greengate, Salford, and are erected by the "Manchester and Salford Baths and Laundries Company," incorporated in 1855. The building is of brick and stone. The architect is Mr. Thomas Worthington, of Manchester; and the contractor, Councillor Neill, of Strangeways. The façade of the building, which is in Collier-street, presents a length of frontage of about 140 feet, and is two stories high, the centre rising an additional story. The style is Italian. The building was commenced in November, and is expected to be publicly opened in August.

The Russian Carpenters.—Baron Von Haxthausen, in his "Russian Empire," thus speaks of the rude skill of the Russian carpenters:—"The correctness of eye, the ease, dexterity, and rapidity with which they detect and turn to account every advantage, is wonderful with these people, or rather with the whole Russian nation. The genuine Russian plotuik properly carries no other implement than an axe and a chisel. With the axe in his belt, he traverses the empire from one end to the other, and seeks and finds employment. It is incredible what he can do with his axe: all the manifold instruments of our accomplished artisans are quite unknown to him; and still his work is not inferior, nay, is often better adapted to the purpose, than that of our more highly-educated workmen. It is often difficult to believe that such charming decorations and carvings as are found on Russian ships and houses can have been produced with a clumsy axe and mere common chisel. The genuine plotuik in the interior despises even the use of the saw, which, however, the workman in Moscow knows well how to use. In the north, where wood is still in superfluity, he hews down a whole tree when he wants a plank, and cuts away at both sides of it, until only the part which he wants remains."

Drainage of Sunderland.—An extensive system of sewerage is about to be carried out in this town according to the plans, and under the direction of Mr. William Crozier, C.E. the borough engineer. It comprises eight miles of brick sewers, with stoneware invert blocks, and forty-six miles of pipes, exclusive of all house drains. The contracts were considered a fortnight ago, and the tender of Messrs. H. Doulton and Co. of London, for their glazed stoneware-pipes, was accepted. This, we believe, is the largest contract for pipe-drainage which has yet been let, and the tenders were from all parts of the country, the samples amounting to about 300 pipes: these were submitted to various tests to show their absorption when whole, and when broken, and also the internal pressure they would bear. The maximum pressure sustained by the pipes selected, Mr. Crozier found to be 160 lbs. to the square inch; and the absorption of these pipes, when broken, was not quite 1 per cent.; while some of the samples submitted absorbed 10 per cent. and the broken pipes in some instances double the quantity they did when whole. The trials were made by Mr. Crozier, at the Sunderland Water Works, where there is a fine machine for testing.

The Chester Surveyorship.—Mr. G. A. Bell, the Chester City Surveyor, has tendered his resignation, it appears, on account of certain meddling and vexatious practices adopted by individual members of the Improvement Committee of the City Council.

Jerusalem and Egypt.—It is to be hoped that some enterprising publisher may lead Mr. Seddon to continue his Illustrations of the Holy Land with a view to publication. The drawings he has already made, and which have been exhibited to many persons in London, convey a more correct idea of the country than anything that has yet been done, and show the admirable spirit that animates the artist. His principal view of the country round Jerusalem is a monument of patient perseverance tributary to skill.

Shakspeare's House, at Stratford-on-Avon.—A gift of 500*l.* by Mr. John Shakspeare, of Langley Priory, near Ashby-de-la-Zouch, has now been made over to trustees, for the purchase of certain property on each side of Shakspeare's house, and the restoration of the Swan and Maidenhead to its original state. It is intended to remove whatever does not form an integral part of "the house" property on the White Lion side, and also Mr. Gill's house in the opposite direction. Mr. Shakspeare also, it is said, contemplates some farther donation in aid of the proposed improvements and restorations.

TENDERS

For building three houses in the Denbigh-road, Kensington, for Mr. W. Ford; Mr. W. Pocock, architect. Quantities supplied:—

Hunt and Gill	£3,298	0	0

A GOOD DRAUGHTSMAN is WANTED in an Architect's Office for a few months. Address, stating qualifications and terms, to Mr. CHARLES E. DAVIS, Bath.

CLERK of the WORKS WANTED, immediately, to superintend masons' and paviours' works, &c. Salary, two guineas per week. He must be practically acquainted with all descriptions of such works, the setting out and the performance thereof, a good judge of materials, active and industrious, and his character must be of the strictest investigation.—Apply, by letter only, to C. D. care of Mr. Clements, Stationer, Woodstreet, City

GREAT GRIMSBY. — To SURVEYORS. The Grimsby Local Board of Health require a SURVEYOR, competent to undertake the management of the Highways of the district, and to execute the other duties imposed on Surveyors of Local Boards of Health by the Public Health Act, as specified in the minutes of instruction of the General Board of Health, for the use of Local Boards of Health, with reference to the powers and duties of such Boards and their officers. The person appointed will also be required to act as Surveyor to the Corporation, under the Great Grimsby Improvement Act, and will be allowed, with the permission of the Local Board, to undertake any other professional work in the town and neighbourhood, that does not interfere with the efficient discharge of the duties of his office. The salary will be 100*l.* per annum.—All applications for the above appointment are to be made in writing, and sent (if by post, prepaid), together with the testimonials of the parties applying, to the Town Clerk of the Borough of Grimsby, on or before SATURDAY the 9th day of AUGUST next.—By order, GEO. BABB, Town Clerk,
and Clerk to the Grimsby Local Board of Health.
Town Clerk's office, Great Grimsby, July 25, 1856.

PARIS EXHIBITION. — ENAMELLED SLATE—TWO FIRST-CLASS MEDALS.—Mr MAGNUS is the only exhibitor whose productions received this double honour; as the Prize Medal at the Great Exhibition of 1851, and the Medal of the Société des Arts, in 1855. This beautiful material and handsome and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other product on that can at all compete with it. It is applicable to a variety of useful and ornamental purposes, for manufactures to be separately specified. Among the chief are chimney pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the level of tables, cupboards, chests of drawers, bath tops, stoves, &c. &c. Also for hall pavements, altar-tablets, pulpits, columns, vases, desks and benches, school-slates, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

DURABILITY of GUTTA PERCHA TUBING Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter.—FROM SIR RAYMOND JARVIS, Bart., YENTNOR, ISLE of WIGHT. —Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and their remark is, that the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here"
N B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD CITY-ROAD LONDON.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky will wear longer, and is about 40 per cent cheaper than the leather hose pipe Manufactured only by WAITHMAN & Co. Bentham, Lancaster

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, burial work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tried at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lime and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 26, Old Broad-street, London; to Mr. M. NUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. D. BRICKFIELDS, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.
Main Place Bull-nosed, Stock, and Place Bricks, also on sale. The place bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale, upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 gault bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plete and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

TO BRICKMAKERS, &c.—WANTED, several Hundred Feet of MOULDED WHITE BRICK COPING, for 9-inch and 14-inch boundary walls, to be throated, &c.—Direct, with description of same, to Mr. W. PURKIS, Builder, &c. Kentish-town.

BRICK EARTH.—TO BE LET, EIGHT or TEN ACRES of very superior CLAY, all in working order, in Essex, close to a Railway Station, 12 miles from London. Apply to Mr. KNIGHT, Surveyor, 14, Argyle-street, Regent-street.

BLUE BRICKS and TILES, of superior quality, and in great variety of mould, for ornamental work, paving, coping, and general purposes.—GEO. C. RYLAND, Hailstone Wharf, Crescent, Birmingham.

FIRE-BRICKS, LUMPS, TILES, &c.—FURNACE-BUILDERS, GAS COMPANIES, and CONSUMERS of these Goods generally, can be SUPPLIED with every description from our Wharf here, on the most advantageous terms.—TRAQUAIR and CO. 9, Bankside, Southwark.

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury New-park, would be willing to enter into arrangements with builders or others for supplying first-class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Dell's Farm, St. ke Newington Green.

EXCELLENT STOCK BRICKS for SALE. Apply to Mr. MARSH'S Agent, at the Field, Wells-road, Sydenham; or at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion-House

ROUPELL-PARK BRICKFIELDS, LOWER NORWOOD, SURREY. Entrance, Norwood-end, Palace-road.—BRICKS of the first class. Red Kiln Bricks Cutters, Pressings, Facings, and Paviors, Clamp-burnt, Yellow and Pale, Seconds, Paviors, and Pickings, Washed Stocks, Stocks, and Place.—Apply to TRUMAN and CO. Norwood Lodge, Palace-road, Roupell-park, Lower Norwood, Surrey.

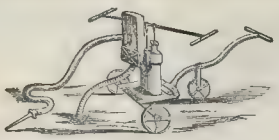
THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements can be made with the owner for leaving it for a better from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine in extent.
HENRY C. MOUNT, Sec.
37 King William Street City

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the EREC-TION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repairs as long as the building itself. It will bear the weight of any ladder, so no case of accident a labourer can repair it. It occupies the room of a large amount of pointing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in towns, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if ordered, fixers can be sent to fix them at 5d. per foot. This charge includes tiles delivered in Agent's yard, cement, and labour. May be had in London, Gloster, Bridgewater, and Ruthy

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Cottage and Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent Staffordshire

PEAKE'S TERRO-METALLIC TILES, Patented, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors; and, thirdly, that the "Reasons of the Judges," page 381, of the Great Exhibition, rank the Manufactories Kloster-dine as "The Thirties," Tunstall, Staffordshire, as the first of the kind in the world.



PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 32s. 6d. per 1,000; floor bricks and 6-inch paving, at 37s. 6d. per 1,000; 8-inch pavings, at 57s. 6d. per 1,000; plain tiles, at 30s. per 1,000. Rail Cash prices. Delivered on trucks in London or Eastern Counties Railway.

H. and R. HAYWOOD, Brownhills Blue Metallic Tileries, near Burslem, Staffordshire; London Depôt, 1, Scott-wharf, Paddington, Manufacturers of Improved Plain and Ornamental Roofing, Ridge, and Flooring Tiles, for Churches, &c.; also Metallic Plain and Socket Sewerage Pipes, &c. adapted for Towns and Railway purposes. They are extensively used on the London and North Western, Great Western, Trent Valley, North Staffordshire, and other Lines of Rail, and highly approved. Warranted imperishable, and to resist all acids and exhalations.
*** A FIRST-CLASS MEDAL was awarded to H. and R. HAYWOOD, by the Jury of the GREAT EXHIBITION.

WILLIAM GILBERT, Manufacturer of all kinds and colours of Tiles, Quarries, Drain-pipes, Moulded Bricks, Brackets, Vases, Chimney-pots, Stoneware Glazed Sewerage Pipes, Ornamental Quoit Blocks, &c.
Tividale, Staffordshire.

PAINT, certified by the Government Engineers and Contractors to be the CHEAPEST and BEST ever discovered for wood and iron, price 38s. per cwt.—Apply to the London Anti-Oxyde Paint Company, D. WALKER, Secretary, 29, New Bridge-street, Blackfriars.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gas, Acid, Sea Vapours, Damps, and the Salt Water; also, intense heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 28lbs. of Wolston's Torbay Paint will effectually cover as much surface as 112lbs. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all painting purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

B. FOWLER, HOLMAN, and CO.

SOLE MANUFACTURERS OF HOLMAN'S PATENT DOUBLE-ACTION CESSPOOL, SEWER FLUSHING, LIQUID MANURE, AND UNIVERSAL FORCE PUMP.

The simplest, cheapest, and best thing of the kind before the public; admirably adapted for thick substances, as the valves three times usual size, and so to suit the case of all kinds of solid matter in it. It is portable, or can be fixed with perfect ease. Delivers a large quantity at small labour. A really good article, commanding extensive home and export sale.

BENJAMIN FOWLER and CO.

FIT UP HEATING-APPARATUS OF ALL KINDS,

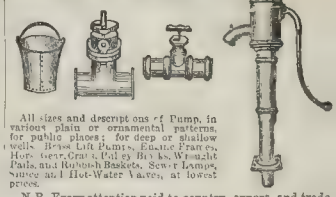
For Public Buildings, Private Mansions, Offices, Manufactories, and Horticultural Buildings,

And for every purpose where artificial heat is required.

They also erect DRYING ROOMS for ASYLUMS, UNIONS, DISTILLING, and MANUFACTURING PURPOSES, upon the most improved principles, and upon the largest or smallest scale.

STEAM-COOKING and BATH APPARATUS FIXED;

Also PUMPS, for DEEP or SHALLOW WELLS,



To be worked by hand, horse, or steam-power;

AND ALL KINDS OF

ENGINEERS', MILLWRIGHTS', or SMITHS' WORK, for Public or Private Establishments.

The most ample references from a long experience in the above branches can be given.

B. FOWLER and CO.'S FARM and COTTAGE PUMPS, 30s

All sizes and descriptions of Pump, in various plain or ornamental patterns, for public places; for deep or shallow wells. Lever Lift Pumps, Garden Engines, Horse-Gear, Crabs, Pulley Blocks, Wrought Pails, and Rubbish Baskets, Sewer Lamps, Sinks, and Hot-Water Valves, at lowest prices.

N.B. Every attention paid to country, export, and trade orders. Experienced workmen sent to any part of the kingdom, to fix PUMP WORK, HOT-WATER, STEAM, BATH, or DRYING APPARATUS.

BENJAMIN FOWLER & CO. GENERAL ENGINEERS, WHITEFRIARS-STREET, FLEET-ST.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly seven years, and having supplied DRAIN-PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Metropolitan Cattle Market, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances particularly referred to, they are desirous of calling attention to the fact that all the pipes supplied by them are from their own Clays, and are manufactured at Aylesford, by which they offer their goods to Contractors, the Trade, &c. of a first-rate quality, and of manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Is suitably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATEN, 23, Old Pancras-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is JONES'S WHOLESALE WAREHOUSE, 29, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS. — JEFFERY, ALLEN, and CO. beg to inform the trade they have a large selection of Paper-Hangings of the most tasteful designs of all qualities, and at very low prices. They so forcibly, in addition to their best papers, which in price, style, and colouring, are equal to any that can be manufactured.—J. A. and CO. are the sole proprietors of the Gutta Percha Paper, an efficient remedy for damp walls.—Factory, 115, Whitechapel; Show-room, 500, Oxford-street.

PAPER-HANGINGS.—To BUILDERS, PAINTERS, and the TRADE generally.—TRUBBLE and CO. SALES BY AUCTION.

HIGHGATE-HILL, AT THE JUNCTION OF MAIDEN-LANE.—Very valuable Freehold Estate, comprising a capital old-fashioned Family Residence, with coach-house, stabling, gardens, and Paddocks, the whole comprising about six acres, full of sand and brick earth, and, from its position, one of the most important and valuable building estates in the vicinity of London.

MESSRS. FAREBROTHER, CLARK, and LYE are instructed to prepare for SALE, at GARRAWAY'S COFFEE HOUSE, on WEDNESDAY, the 27th of AUGUST, at TWELVE o'clock, in one lot, a very valuable FREEHOLD ESTATE, situate on Highgate-hill, at its junction with Maiden-lane, and close to the town; comprising a capital old-fashioned family residence, containing dining and drawing rooms, numerous bed rooms and servants' offices, with garden, with coach-house, stabling, and brew-house. Adjoining the residence is a conservatory, opening to the lawn and pleasure-grounds with spring pipes, and paddock, with pond of water, the whole containing about six acres. The views from the property over London are most extensive, and from the great frontage, both to Highgate-hill and Maiden-lane, would make one of the most eligible building sites ever offered. The estate is full of brick earth, and sand, and being raised the whole might be easily converted to brick prior to building on the property. May be viewed by cards only, which, with particulars and plans, may be had of D. Hudson, Esq. Solicitor, Gresham-street, City; at Garraway's; and at the Offices of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.

STAMFORD HOUSE, CHURCH STREET, CAMBERWELL. Surplus Stock of a Builder, and the remaining portion of the excellent Materials of the above Mansion.

May be viewed, and Tenders to be sent in to George ELEVEN, on TUESDAY, to the Office of the Contractors, Parliament street.

TO BUILDERS AND OTHERS.

CLAPHAM COMMON.—TO BE SOLD or LET (with the option to purchase hereafter), FREEHOLD LAND in this very superior and delightful locality, in plots, suitable for the erection of villas and other first-class residences.—Apply by letter, post paid, to A. B. care of Mr. Evans, Stationer, &c. Clapham Old Town

FREEHOLD LAND, DULWICH. — TO BE SOLD, SIXTY ACRES of LAND, in a fine situation, offering a very desirable site for a building speculation. Also LAND TO BE LET, for building, with frontage, on Holmwood-common, Dorking.—Apply to F. B. NEWMAN, Esq. Architect, 12, Pump-court, Temple.

HAMPTON COURT.—About Eight Acres of BUILDING GROUND TO BE LET, on 99 years' lease, or SOLD, in small or large plots, near the above Palace and Railway, at very moderate rents and prices. An advance of say 50 per cent on the outlay will be made for respectable parties taking a considerable frontage.—For terms, &c. apply to Mr. F. LETT, Architect, 34, Essex-street, Strand

ST. JOHN'S, SOUTH HACKNEY.—A FREE GOLD BUILDING FRONTAGE, land-tax redeemed, of 168 feet, to an average depth of 87 feet, and about 40 feet wide; situate about ten minutes' walk from the Hackney Railway Station and Victoria-park, Eye and five-roomed House, will LET immediately, being a short remove from two large factories. Price 30l.—Apply at No. 6, Bourne's-road, Cambridge-heath

ELIGIBLE GROUND-RENTS.—The CONSERVATIVE LAND SOCIETY.—NINETEEN LEASED PLOTS, at 7l. and 10l. each per annum, for nineteen years, will be OFFERED in the BRIGHTON ESTATE, together with other eligible Building Plots for which first-rate ground rents may be obtained, on THURSDAY, AUGUST 7, at the OFFICES, 33, Norfolk-street, Strand. Some valuable plots at the original prices will also be allotted on St. Margaret's, near Richmond; the Woodbury-park, Tunbridge Wells; Seven Sisters, Tottenham; Oaklands, Wealdstone; Downshire-square, Reading; West Malvern, Malvern Hills; Brookley Hill Park, Forest Hill; Hounslow, Hertford, Woodgreen, Hornsey, and the Enfield New Estate. Prospectuses may be had at the Offices, as also prospectuses of the Society as an investment for capital and savings without taking land,

CHARLES LEWIS GRUNEISEN, Secretary.

ROTHERHITHE.—TO BE LET, on Building Lease, a PLOT of GROUND, situate at the Corner of Cookham, Trinity-street, for a term of 70 years, by TENDER, to be made by letter, on or before the 20th day of AUGUST next, addressed to Mr. TOWELL, Atlas Assurance Office, 29, Cheapside, of whom all particulars may be obtained.

FREEHOLD LAND FOR SALE.—12½ ACRES at East Barnet, situate on an eminence, with a frontage to high road, and commanding delightful and extensive landscapes of the surrounding country. It is peculiarly eligible for building purposes, being easy of access from Town by omnibus or railway, and is suitable for the erection of villas for gentlemen desirous of enjoying the comforts of retirement in the country.—Apply to Mr. BICKELL, 70, Goswell-road.

FREEHOLD LAND in the CITY.—TO BE LET, on Lease for Sixty one Years, VACANT GROUND being part of the parish of St. Botolph, Bishopsgate, situate in Halfmoon-street, Bishopsgate, suitable for the erection of dwelling-houses, shops, warehouses, or factory. Frontage of 50 feet by 30 feet depth.—For particulars apply to Mr. W. H. HEATH, Surveyor, 7, Great Winchester-street, Broad-street, City.

FREEHOLD LAND TO BE LET, on Building Lease for ninety nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

FREEHOLD LAND TO BE LET, on the river Thames between the river and the Victoria Docks, Limehouse, near the Commercial Road, for long or short terminable years. This land has not only the advantage of river frontage, but it is bounded on the land side by a branch of the Eastern Counties Railway, and is therefore very eligible. Plans of the property may be seen, and particulars had of Mr. JOHN OAKLEY, Land Agent and Surveyor, No. 60, Dougliis-street, and of Messrs. KING and LOCKE and DORMAN, Solicitors, No. 21 Essex-street Strand, London.

VALUABLE SITE for BUILDING, TO BE LET, or SOLD.—The Directors of the Western Bank of London are prepared to receive TENDERS for a PRIMA BUILDING GROUND, in BROOK-STREET, adjoining the Bank-house, in Hanover-square.—Particulars may be had on application to Messrs. MURRAY, HYMER and JACKSON, 12, Hanover street, Hanover square, to whom the Tenders may be addressed.

BUILDING LAND, in eligible situations. One lot is in Kentish-town, partly covered; the other is at a railway station, eight miles from town, where there is an excellent opening for a Coal and Timber Merchant, at the Station. Also a SHOP and DWELLING-HOUSE, TO LET, at about 10l. per annum. Money could be laid out upon the latter.—Apply to THOMAS SUNN and SONS, 21, Lamb's Conduit-street, Foundling Hospital

STRATFORD, ESSEX. — FREEHOLD LAND, with three roods of Land in a field from land-tax and free of tithe, TO BE LET, on Lease, for a long term of years, in large or small plots, suitable for manufactories or building purposes. Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for thirty-one years, with power of option to purchase. Plots from one to four acres for large villa residences; smaller plots for semi-detached villas, and a plot for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall, or to Messrs. BARKER, BOWKER, and PEAKE, 1, Grosvenor-square

VALUABLE FREEHOLD LAND, Upper Holloway, near the Archway Tavern.—TO BE SOLD or LET on Building Lease for 99 years, direct from the freeholder, a portion of valuable LAND, fronting the Archway Road, Upper Holloway, having a frontage to an intended new street of about 500 feet, average in depth 150 feet to 165 feet. The purchaser or lessee may build thereon as an investment, a privilege not granted to the owners who have purchased the adjoining land.—A plan may be seen, and further particulars known on application to R. W. POWYS, Esq. Solicitor, 38, Bedford-square; or Messrs. DENT and SON, Surveyors, 4, Southampton-buildings, Chancery-lane, and Camden-town.

BUILDING LAND, fronting a Main Metropolitan Road, at UPPER HOLLOWAY. — TO BE LET, on BUILDING LEASE, for ninety-nine years, a valuable PLOT of FREEHOLD LAND, with a frontage of 200 feet, having a depth of 150 feet to a sewer in front, and all the necessary Drains and Sewers laid down. Lease direct—Plans and particulars of the boundaries, &c. of Messrs. DENT and SON, Surveyors, 4, Southampton-buildings, Chancery-lane, and Camden-town.

NEW WINDSOR ESTATE. — Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences, with Stabling, which are most eligibly situate in a healthy locality. The situation is at or near Windsor, abutting on the Park and Long Walk, and commanding splendid views of the Castle. Within ten minutes' walk of the Great Western and fifteen minutes' walk of the South-Western Railway Stations. A plan can be had by intending purchasers.—Apply to Mr WILLIAM SIM, Architect and Surveyor, 2, Danes-Inn, Strand.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brothers) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, August 2, 1856.

COMPETITIONS.

TO ARCHITECTS.—Weston-Super-Mare Improvement and Market Act, 1842 and 1851.—The Commissioners acting under and by virtue of the above Acts of Parliament, are prepared to receive PLANS and SPECIFICATIONS for the ERECTION of a new TOWN-HALL over their Market-place, the cost of such building not to exceed 2,000*l*. A plan of the ground, if required, may be obtained by application to the Clerk. The drawer of the plan approved by the Commissioners will receive a premium of fifteen guineas, such plan to be the property of the said Commissioners. Plans must be sent, free of carriage, to the Office of the Clerk, No. 5, South Parade, Weston-super-Mare, aforesaid, on or before the 8th day of SEPTEMBER next.

WILLIAM SMITH, Clerk to the Commissioners.

Dated, Weston-super-Mare, July 18th, 1856.

TAMWORTH UNION.—To ARCHITECTS—INTENDED WORKHOUSE for the TAMWORTH UNION.

Plans and general specifications are required for a Workhouse, to be erected on land near Tamworth. A plan of the site may be seen, and all other particulars known, on application to the Clerk to the Union. The whole to be done in a plain and substantial manner. The maximum sum proposed to be expended on the building is 4,000*l*. The plans to be sent under a motto, and the names under seal, to the Clerk, on or before the 29th day of August next.

The Architect producing the best plan in the estimation of the Board of Guardians will, subject to the approval of the Poor Law Board being obtained to such plan, be employed at a sum not exceeding 5 per cent. upon the outlay. The plans not selected or approved of will be returned with as little delay as possible after the selection. The guardians do not bind themselves to accept any of the plans which may be submitted.

Accommodation is required for 300 inmates, with wards, yards, and other conveniences, suitable for their complete classification in proportions as follows, namely:—

Men, infirm from age or other cause	25
Able-bodied Men and Youths above fifteen	15
Women, infirm from age or other cause	25
Able-bodied Women and Girls above fifteen	15
Boys under fifteen	30
Girls under fifteen	50
Lying in Women	2
Sick Males	10
Sick Females	8
Detached Wards for Vagrants of both sexes.	
Receiving Wards.	

A Board-room for 30 Guardians, with a Clerk's Office contiguous and a strong closet.

Accommodation will also be required for a Master and Matron and Schoolmaster and Schoolmistress, conveniently situated with reference to their respective duties.

A Dining-hall, suitable for the whole of the inmates to dine at one time.

Separate Schoolrooms, Workrooms, and Dormitories for Infants.

The Guardians particularly desire that the plans be so framed that the children may be kept totally apart from the adult inmates.

The sleeping accommodation for the inmates in health to be not less than 300 cubic feet of space for each inmate, and 600 cubic feet for each sick person.

A Well in the able-bodied men's yard, with a Pump to be fixed therein, to be worked by manual labour, of sufficient power to supply the establishment with water.

Cisterns for cold water, with requisite fittings.

Tanks under ground, to store the rain water from the roofs, with flushings to the drains.

Pumps in the washhouses, and reservoirs for the drainage.

The requisite fittings in the lavatories and water closets.

The house to be provided with open fire-places and a complete system of ventilation.

Stabling for about four horses.

The house to be built of bricks.

Any further extension of the buildings must be provided for with due regard to uniformity.

By order of the Board of Guardians,

JOHN SHAW, Clerk to the Guardians.

Tamworth, 16th July, 1856.

EXHIBITION of ART-TREASURES of the UNITED KINGDOM, to be OPENED at MANCHESTER in MAY, 1857.

PATRONS

Her Majesty the QUEEN.
His Royal Highness Prince ALBERT.

PRESIDENT

The Earl of ELLESMERE, K.G. Lord-lieutenant of Lancashire.

EXECUTIVE COMMITTEE

Thomas Fairbairn, esq. Chairman.	
The Mayor of Manchester.	Joseph Heron, esq.
Thomas Ashton, esq.	Edmund Potter, esq.
William Entwisle, esq.	Sigismund J. Stern, esq.

GENERAL COMMISSIONER.—John C. Deane, esq.

The object of the proposed exhibition is to secure a collection of the choicest and most instructive works which illustrate the Ancient and Modern Schools of Art Oil Paintings, Water-colour Drawings, Engravings, Sculpture in Marble and Stone, Carvings in Ivory and Wood, Bronzes, Coins, and Works of Artistic Excellence, in Gold, Silver, Steel, or Iron, in Glass and Earthenware, Terra Cotta and Pinder, will necessarily constitute the manufactures of the Exhibition.

The Executive Committee respectfully invite communications from possessors of Art Treasures who may feel interested in the success of a scheme which aims at the worthy illustration of the art-wealth of the United Kingdom.

From the known catalogues of the resources of the country, thus extended, the committee propose, with the assistance of officers of acknowledged competency, to make such a selection as will enable them to place before the world an Art Exhibition not less valuable to the student from its chronological arrangement, than attractive to the public from its beauty and completeness.

The committee do not desire to elicit from manufacturers specimens of their productions, either for competition or sale.

The Exhibition Building will be erected on a site adjoining the Botanic Gardens, distant about two miles from the centre of the City, and quite free from atmospheric impurities. Great consideration has been given to the mode of lighting the halls for the display of pictures and sculpture, and every precaution will be taken to protect the works of art from injury.

In all cases where desired by the owners, the Committee will insure the art treasures contributed.

There will be railway communication from all parts of England, direct to the Exhibition Building, and contributors will be received from, and returned to their owners, free of expense.

Communications may be addressed to the Chairman, Mosley-street, Manchester.—By order of the Executive Committee,

CHARLES H. MINCHIN, Secretary.

Offices of the Exhibition, 100, Mosley-street, Manchester.

CONTRACTS.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Director-General of Contracts, at the War Department, Pall-Mall, London, on or before MONDAY, the 8th SEPTEMBER next, from all persons desirous of CONTRACTING with the War Department for the ERECTION of a MILITARY HOSPITAL, at NETLEY, in the parish of Hound, in the county of Southampton. Plans and specifications of the work may be seen, and forms of Tender, and every other necessary information obtained, on application at the Surveyor's Office at the War Department, Pall-Mall, London, till the 6th SEPTEMBER (Sundays excepted), between the hours of NINE A.M. and FIVE P.M. The site may be inspected, and information obtained on application to MAJOR RAVENHILL, Commanding Royal Engineer, Netley-cliff; or at the Royal Engineer's Office on the ground. The person whose Tender may be accepted, will be required to enter into a bond with two eligible securities, jointly and separately to be bound under a penalty of 10,000*l*. for the due performance of the Contract. Tenders to be addressed, "The Director-General of Contracts," War Department, Pall-Mall, London, and to be delivered free, endorsed, "Tender for Works for Military Hospital, Netley." No Tender can be admitted after the said 8th SEPTEMBER 1856.

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

R. O. MENNIE, Surveyor.

War Department, Pall-Mall, July, 1856.

ROYAL ENGINEERS' CONTRACTS.—WAR DEPARTMENT.—The War Department being about to enter into a CONTRACT for ALTERATIONS and ADDITIONS to certain portions of the ROYAL ARTILLERY BARRACKS, at Woolwich, such persons as may be desirous of Tendering for the same may receive information relative thereto by applying to the District Clerk of Works, at the Royal Engineers' Office, Grand Depôt, Woolwich, between the hours of TEN and FOUR, up to the 16th of AUGUST, 1856. Tenders to be delivered at the Office of the Director-General of Contracts, Pall-mall, London, on the 19th of AUGUST, 1856.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

NOTICE to BUILDERS.—CONTRACT for the ERECTION and COMPLETION of a MILITARY HOSPITAL, with Outbuildings and Enclosure Wall, at Sheerness.—The Command in Royal Engineer Office, Sheerness, will RECEIVE SEALED TENDERS at the Office of the Director-General of Contracts, Pall-mall, London, on or before THURSDAY, the 21st day of AUGUST, 1856, from such persons as may be desirous of CONTRACTING for the ERECTION and COMPLETION of a SOLDIERS' HOSPITAL, with OUTBUILDINGS and ENCLOSURE WALL, at Sheerness. The plans may be seen, and printed specifications and forms of Tender obtained, by persons fully competent to undertake the work (none others need apply), at this Office, between the hours of TEN and FOUR o'clock, from THURSDAY, the 7th, till WEDNESDAY, the 20th of AUGUST, 1856, Sundays excepted. The party whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 3,000*l*. for the due performance of the contract. Tenders for the above works to be addressed to "The Director-General of Contracts, Pall-mall, London," and endorsed "Tender for Military Hospital, Sheerness." No Tender can be admitted after the said 21st day of AUGUST, 1856.

N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Sheerness, Aug. 2, 1856.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS.—WAR DEPARTMENT WORKS.—Sealed TENDERS for the ERECTION of a FORT and BARRACK at Mount Tourville, Alderney, will be received by the Director-General of Contracts, War Department, Pall-mall, London, on or before the 30th day of SEPTEMBER next, after which date no Tender will be received. Detailed drawings may be seen, and every requisite information obtained, at the Royal Engineer's Office, Alderney, from the 7th to the 21st of AUGUST next, and at the Office of the Inspector-General of Fortifications, War Department, Pall-mall, from the 1st to the 21st of SEPTEMBER next. The terms of contract, specification for the works, and forms of Tender, can be procured at the Office of the Director-General of Contracts, War Department, Pall mall, London, and at the Royal Engineer Offices, at Guernsey and Alderney. Each Tender forwarded must be attached to a copy of the terms of contract and specification. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders. Tenders for the above work to be addressed to "The Director-General of Contracts," War Department, Pall mall, London, and endorsed "Tender for Erecting a Fort and Barrack at Mount Touraille, Alderney."

TO BUILDERS.—Notice is hereby given, that TENDERS will be received by the War Department, at their Office, Pall Mall, London, on THURSDAY the 28th day of AUGUST, 1856, from such persons as may be willing to undertake the ERECTION of a BARRACK for Married Soldiers, with OUTBUILDINGS, &c. at Portsea, in the county of Hants. The plans, specification, and contract can be seen, and every information had, on application at this office, on and after the 11th AUGUST, 1856, between the hours of TEN and FOUR each day (Sundays excepted). Tenders to be endorsed, "Tenders for the Erection of a Barrack for Married Soldiers, with Outbuildings, &c. at Portsea, in the county of Hants."

Royal Engineer Office, Portsmouth, July 30, 1856.

NOTICE to PAINTERS, CONTRACTORS, and OTHERS.—ROYAL ENGINEER CONTRACT.—The War Department being about to enter into a CONTRACT for PAINTING the Exterior Woodwork, &c. of the Buildings, &c. of the Royal Military Barracks at Woolwich, such persons as may be desirous of Tendering for the same may inspect the specification, and receive every necessary information relative thereto, by applying to Mr. CARTWRIGHT, Clerk of Works at the Royal Engineer Office, Grand Depôt, Woolwich, between the hours of TEN and FOUR, up to the 23rd AUGUST, 1856. Tenders to be delivered at the Office of the Director-General of Contracts, War Department, Pall-mall, London, on the 28th of AUGUST, 1856. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Grand Depôt, Woolwich, 4th August, 1856.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Office of the Director-General of Contracts, War Department, Pall-mall, London, on or before the 8th SEPTEMBER next, from such persons as may be desirous of CONTRACTING with the War Department for BUILDING NEW BARRACKS to accommodate 30 officers, and 1,000 non-commissioned officers and privates, at Gosport, in the County of Hants. The buildings to comprise commanding officers' quarters, officers' quarters, quarters for staff-sergeants and married soldiers, laundry, workshops and stores, soldiers' barracks, guard house, canteen, stable for officers' horses, coal-yard, engine-house, &c.; sinking wells, constructing tanks, drains, sewers, enclosure walls, and iron railings; planting trees, &c. &c. Plans and Specifications, with forms of Tender, may be seen, and all other information obtained at the Royal Engineer Office, Gosport, any day Sundays excepted, between the hours of TEN and FOUR, from the 2nd to the 14th of AUGUST to the 8th of SEPTEMBER, 1856. The whole of the works to be completed within 24 calendar months from the date of notification of acceptance of Tender. No notice will be taken of any Tender unless it be in the prescribed form. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Portsmouth, 30th July, 1856.

TO BUILDERS.—CHELTENHAM COLLEGE.—The Board of Directors of the Cheltenham College are willing to receive TENDERS for the ERECTION of a CHAPEL, in connection with the Institution. The drawings and specifications may be seen, and further particulars learned on Mr. W. L. BAILY, or Mr. JAMES HUMPHRIS, Architect, Cheltenham. The Tenders, which are to be sealed, and endorsed "Tender for New Chapel, Cheltenham College," must be delivered on Mr. W. L. BAILY, at the College, on or before the 1st day of SEPTEMBER next. The Directors do not pledge themselves to accept the lowest Tender.

D. J. HUMPHRIS, Architect.

London road, Cheltenham.

BRECON.—To BUILDERS.—Persons desirous of TENDERING for the RESTORATION and ENLARGEMENT of the Parish Church of St. Mary, Brecon, may see the plans and specifications, and obtain forms of tender, at the Architect's, No. 8, Bedford-square, London; or at their local Offices at Newport or Cardiff respectively; and also at Brecon, on or after AUGUST 13th. Tenders to be delivered to the Architect, No. 8, Bedford-square, London, or at their local Offices at Newport or Cardiff respectively, on or before THURSDAY, AUGUST 28th at HALF-PAST TWO o'clock precisely. They do not bind themselves to accept the lowest or any of the Tenders.

TO BUILDERS.—LITTLE BRICKHILL PARSONAGE, near Fenny Stratford.—Persons willing to CONTRACT for the ERECTION of a PARSONAGE HOUSE and OFFICES at the above place, may inspect the plans, &c. at Preston, and obtain Bills of Quantities on the 20th inst. at Mr. ARTHUR BILLING'S, 21 Buckingham-street, Adelphi, London, between the hours of TEN and FOUR, to whom sealed Tenders are to be delivered on or before the 26th inst. The quantities will be supplied. The Incumbent reserves the right of rejecting the lowest or any Tender. The Contractor will be required to enter into the usual bond, with two sureties, and approved sureties, at his own expense, for the due execution of the works.

[For remainder of Contracts see next page.

CONTRACTS.

Sunderland, 24th July 1856.

DEEPING FEN DRAINAGE.—To BUILDERS and CONTRACTORS.—TENDER for Works.—The Trustee appointed to carry into effect the provisions of the Deeping Fen Drainage Act is desirous to be prepared at their next meeting which will be held at the Great Northern Hotel, in the town of Peterborough, on WEDNESDAY, the 27th day of AUGUST next, at TEN o'clock in the forenoon, to receive TENDERS for the CONSTRUCTION of a NEW SLUICE, with three Drainage openings and other Works connected therewith, to be erected at the outfall of the Vernatto Drain at the junction of the same with the River Welland in or near the parish of Pinchbeck, in the county of Lincoln, at a place called the Reservoir. Plans and Specifications of the same may be seen at the Office of Mr. LEWIN, the Engineer, Boston-street, Boston, on and after the 4th day of August next. The Contractors are to be prepared with the name and residence of their Surety at the time of tendering. The Trustees will not be bound to accept the lowest Tender nor bound to accept otherwise deemed eligible.
Dated this 21st day of July 1856.
By order of the General Board and Works' trustees,
JOHN CARTER, Clerk.

CARDIFF, GLAMORGAN.—TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of TWO first-class semi-detached VILLAS at Canton, with walls, offices, &c.; also for TWO other VILLAS of similar character in another part of the town, for THREE HOUSES connected together, with walls and offices in each house, master drawings and specifications, and also a quantities, at the offices of the Architects, Messrs. W. and E. HABERSHON, 38, Bloomsbury-square, London; or at their local offices at Newport, Monmouthshire, by application to their resident clerk, Mr. DIXON; or at Cardiff, to their resident clerk, Mr. WELKINSON, on or after AUGUST 8th. Tenders to be delivered to Architects at Cardiff, on THURSDAY, AUGUST 28th, which do not bind themselves to accept the lowest or any of the Tenders.

THE LOCAL BOARD of HEALTH for TOTTENHAM are prepared to receive TENDERS from persons willing to contract for any of their Works, viz.:—
CONTRACT No. 20.—Making Two Barrows &c.
CONTRACT No. 21.—Laying cast-iron Water-pipes and a Drain.
CONTRACT No. 22.—Delivering about 40 Tons of Cast-iron Water-pipes and Castings.
CONTRACT No. 23.—Erecting an Engine and Boiler House, &c.
CONTRACT No. 24.—Making and Erecting a High-pressure Expansive and Condensing Steam-engine, &c.
The specifications, conditions of contract, drawings, and plans, may be inspected and further particulars obtained by application at the Offices of the Board, or at the Offices of PILBROW, C.E. (Engineer to the Board), Tottenham-green. Sealed Tenders properly endorsed and addressed to the Local Board of Health, Tottenham, Middlesex, to be sent in on or before THURSDAY, the 21st of AUGUST last. By order of the Board,
WILLIAM HEATH, Clerk
Tottenham, July 24th 1856.

AMBERGATE, NOTTINGHAM, and BOSTON and EASTERN JUNCTION RAILWAY and CANAL COMPANY.—Persons desirous of CONTRACTING for the ERECTION of the GOODS WAREHOUSE proposed to be built at the Nottingham Terminus, are informed that the drawings and specification may be seen at the Offices of Mr. T. C. HINE, Nottingham, from AUGUST 12th to the 20th inclusive. Sealed Tenders, addressed to the Secretary, to be delivered at the Company's Office, Saint Peter's-gate, Nottingham, on or before AUGUST 25th. Printed quantities will be supplied by the Architect, at whose Offices particulars may also be had with reference to the Contracts for the booking and parcels offices, refreshment-rooms, &c.
THOMAS C. HINE, Architect.
The lowest Tender not necessarily accepted.
Nottingham, 5th August 1856.

TO PUBLIC COMPANIES, CONTRACTORS, and OTHERS.—DEODORIZING SEWAGE.—The Southampton Local Board of Health being desirous of avoiding the discharge of the contents of the Sewers into the Tidal Waters, hereby give Notice that they are willing to enter into ARRANGEMENTS, upon liberal terms, with any Public Company or any responsible party, who may be prepared to ERECT the WORKS required for DEODORIZING the SEWAGE of the TOWN for the purposes of MANURE. Further information may be obtained on application to Mr. ANTHONY MORGAN, the Superintendent of the Sewerage Works; or of the Clerk, at the Public Health Office, Southampton.
CHARLES E. DICKON,
Clerk to the Local Board of Health.
Southampton, July 23, 1856.

MIDDLESEX and ESSEX TURNPIKE ROADS.—Notice is hereby given, that the Trustees of these roads are willing to receive PROPOSALS and to CONTRACT for 1,000 Tons of blue GUERNSEY GRANITE, of the best and hardest quality, broken to a gauge of two inches and one-half inch, and to be free from dust; and also, for the supply of 1,500 Tons of the best picked Scottish Flints, broken to the above gauge. The materials are to be delivered alongside the wharf of Messrs. Tyler and Barrel, at Dept. Essex, within eight weeks from the Tender being accepted, the Trustees to pay the expense of unloading the barges. If agreed upon, the said Granite and Flints be of the sort and size as instructed for, and delivered within the aforesaid time, payment will be made for the said material on the 15th of OCTOBER next. Any material not according to the above specification will be rejected and not paid for. Tenders sealed and endorsed "Tender for broken Granite," or "Tender for Kentish Flints," to be sent to this Office, on or before TUESDAY, the 19th of AUGUST next, with a sample of each description of stone, and of each sample is not so delivered in to the Office, the Tender will be rejected. The Trustees do not bind themselves to accept the lowest or any specific offer that may be made to them. The penalty for non-performance of the Contract is to cease to be set.
GEORGE DACRE, Solicitor and Clerk to the said Trustees.
Turnpike Office, Bow, July 28, 1856.

CONTRACTS.

MIDLAND RAILWAY.—To BUILDERS and CONTRACTORS.—The Directors of the Midland Railway are desirous of receiving TENDERS for the ERECTION of an ENGINE-SHED (to contain twenty four engines), PITTING-SHOP, and other BUILDINGS, at the Locomotive Station, and also for the ERECTION of an additional WORKSHOP for the Locomotive Department at Derby.—Drawings and specification for the above may be seen at the Engineer's Offices, Derby Station, on and after WEDNESDAY, 6th AUGUST next. Tenders to be delivered to the Secretary to the Way and Works Committee, Derby Station, not later than TEN a.m. on TUESDAY, 12th of AUGUST next. The Directors do not bind themselves to accept the lowest or any Tender.—By order
Derby, July 30 1856. JOSEPH SANDERS, Secretary.

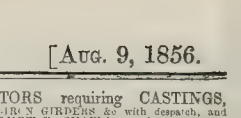
TO BUILDERS and OTHERS.—The Paving Committee of the Vestry of Saint Mary, Newington, Surrey, will meet at the VESTRY-ROOM, in the Parish Church, on MONDAY the 18th AUGUST instant, at SEVEN o'clock in the evening, to receive TENDERS from persons willing to CONTRACT for converting an open shed and tool house at the Stone-yard of the Vestry, in Deanscl-mews, Cockspur-lis into STABLES, of three and four stalls respectively, and also for the ERECTION of a SHED at the before-mentioned Stone-yard. A specification of the work required to be done, may be seen at the Office of the Clerks to the Vestry.
H and E. CHESTER, Joint Clerks to the Vestry.
1, Church row, Newington-butts.

THE GREAT NORTHERN RAILWAY COMPANY.—To CONTRACTORS and BUILDERS.—The Directors are prepared to receive TENDERS for the ERECTION of FIFTY COTTAGE DWELLINGS, at New England, near Peterborough. Parties disposed to Tender may obtain the drawing, specification, and form of Tender (on which form only Tenders will be received) on payment of 5s. per set upon application at this Office, on or before WEDNESDAY, the 6th AUGUST. Tenders sealed up and marked "Tenders for Cottages," must be lodged at this Office before TWELVE o'clock at noon on TUESDAY, the 26th AUGUST instant, when parties tendering must be in attendance.
N.B.—The Directors do not bind themselves to accept the lowest or any Tender.
By order.
J. R. MOWATT, Secretary.
Secretary's Office, King's-cross Station, London,
5th August, 1856.

TO BUILDERS.—EAST and WEST KENT MILITIA STORE HOUSES, to be built at Canterbury and Maidstone.—Persons desirous of CONTRACTING with the Justices of the County of Kent for the ERECTION of MILITIA STORE HOUSES at Canterbury and Maidstone may inspect the plans and specifications, and obtain all other information, at the Office of the County Surveyor at Maidstone, on and after THURSDAY, the 14th instant, for the West Kent; and at the County Sessions House at Saint Augustines, for the East Kent, on and after MONDAY, the 18th instant; and they are requested to deliver Tenders for the said works to the County Surveyor at Maidstone, sealed and marked "Tender for Militia Store-houses," before TEN o'clock in the forenoon of SATURDAY, the 30th day of AUGUST instant, and to attend personally at the General Sessions, to be held at the Town Hall at Maidstone, at HALF-PAST TWELVE o'clock in the afternoon of that day. The lowest Tender will not necessarily be accepted unless approved in all respects. Security will be required for the performance of the contract, and the names of the sureties proposed are to be named in the Tender.
H. A. WILDES, Clerk of the Peace for Kent.
Maidstone, August 6, 1856.
N.B. The quantities will be furnished.

TO CONTRACTORS.—The Local Board of Health for Kingston-upon-Hull having determined to let the execution of ALL WORKS by CONTRACT, are prepared to receive TENDERS from parties willing to undertake the following WORKS for STREET PAVING and SEWERING, viz.:—About
7,000 yards super. of Foundations to Roadways.
4,700 " Paved Roadways.
3,900 " Macadam Roadways.
4,800 " Tooled Yorkshire Flagging and Flags, relaid
1,500 " Asphalted Footways.
3,100 yards lineal of Channels and Edge Curb.
350 " Glazed Fireclay Pipe Sewers.
Together with other Works, such as Manholes, Street-gates, and Gullies, &c. &c. connected therewith. Certain materials for the above will be supplied by the Board, and the works may be Tendered for in one or more Contracts. The drawings may be inspected, and every information obtained, at the Offices of the Surveyor to the Board, on and after MONDAY, the 11th inst. and until MONDAY, the 25th inst. when all Tenders must be delivered, sealed, signed, endorsed, and addressed to the undersigned. A printed copy of the specifications, with form of Tender, schedule of prices and abstract of quantities, may be had upon payment of 5s. The Board does not bind itself to accept any Tender, and the Tender accepted will have to be guaranteed by sufficient sureties, on the signing of the contract. By order of the Works Committee
C. S. NEWMAN, C.E. Surveyor to the Local Board.
Sculcoates-Hall, Hull, 4th August, 1856.

COUNTY of WORCESTER.—To BUILDERS and OTHERS.—Persons desirous of TENDERING for the several WORKS required in taking down the present and erecting a NEW EAST WING, also for the erection of a THREE-CLASS DEBTORS' PRISON, at the Worcester County Gaol, may inspect the plans and specifications, and obtain any information in reference to the same, at my Office, 47, Foregate-street, Worcester. Sealed Tenders to be forwarded to me on or previous to the ensuing Quarter Sessions, on FRIDAY, the 26th inst. endorsed "Tender for East Wing and Debtors' Prison." No pledge is given to accept the lowest or any Tender unless satisfactory.
HENRY ROWE, Jun. County Surveyor.
Worcester, August 7th, 1856.



BOROUGH of LEEDS.—To CONTRACTORS.—WANTED, by the Town-hall Committee of the Borough of Leeds, TENDERS for the ERECTION of a TOWER on the New Town-hall. Plans and specifications may be seen at the Office of Mr. CUTHBERT BRODRICK, Architect, Leeds, on and after the 24th instant, and sealed Tenders are to be sent in to the Town Clerk's Office, on or before the 13th AUGUST next, addressed "To the Chairman of the Town-hall Committee." Tender for Town-hall Tower. The Committee do not pledge themselves to accept the lowest Tender.—By order,
JOHN A. IKIN, Town Clerk.
Leeds, 18th July, 1856.

ROYAL POLYTECHNIC.—Patron, H.R.H. Prince ALBERT. — On Monday, August 11th, at Eight p.m. Henry Mayhew, Esq. author of "London Labour and London Poor," will lecture on "The Humours of Street Life." BENJAMIN FOWLER & CO. GENERAL ENGINEERS, WHITEFRIARS-STREET, FLEET-ST.

Plan and Section of Buckled Plate: Convex Side.

MALLET'S PATENT BUCKLED PLATES.

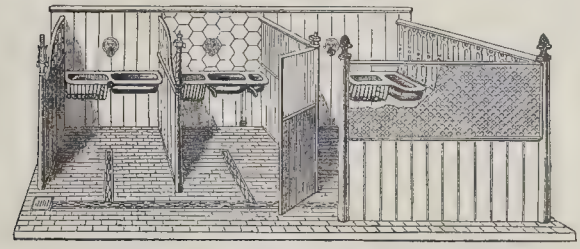
TUPPER AND CARR,

SOLE LICENSEES AND MANUFACTURERS.

THESE Plates are applicable to every purpose where strong, rigid, light, and durable load-sustaining surfaces are demanded; as for the Flooring of Bridges, Viaducts, Jetties, Fireproof Floors for Buildings, Fireproof Partitions, Bulkheads, Doors, and Shutters; the Plating in betwixt Iron Piling for Wharf or Dock Walls; the Covering of Iron or other Roofing, as for Building-Slips in Dockyards, for Railway Stations, &c. The construction of Iron, Military, Colonial, or other Huts, Stores, and Iron Buildings of all sorts; the Formation of Water-Tanks; the Covering of Reservoirs of Waterworks; and, generally, to every purpose to which Corrugated Iron has been applied, besides many others to which that is inapplicable, as, for example, the Construction of Balcony or Cantilevered Galleries, Projecting Footways, &c. the Plates deriving their support solely from themselves and the walls

BUCKLED PLATES may be united to each other, or to the frame of the structure they cover, by either lap or butt joints, and either by screw bolts, rivets, or wood screws (to timber), and the joints are made absolutely water-tight when required, by rivetting and chinking up, or by interposed strips of felt saturated in oil cement, or in tar and pitch, or by strips of vulcanised India-rubber, or by a thin layer of oil putty.

The sizes of the Patent Buckled Plates are—4 ft. by 4 ft.; 3 ft. by 3 ft.; 4 ft. by 2 ft.; and 3 ft. by 1 ft. 6in.



Other sizes by agreement.

For further particulars, prices, &c. apply to the Licensees,—

TUPPER AND CARR,
3, MANSION-HOUSE-PLACE, LONDON, AND 6, BERKLEY-STREET, BIRMINGHAM.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the ball of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings. Cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

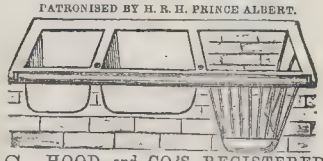
The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

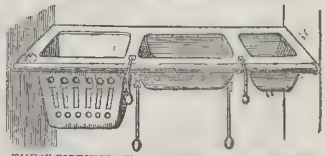
These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.



The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.



SOLE AGENTS:
BENHAM AND SONS,
19, WIGMORE-STREET, LONDON;

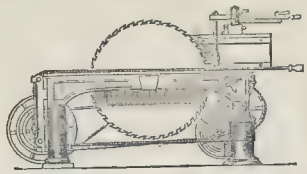
Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.
DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

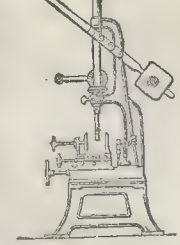
TYERMAN'S PATENT HOOP-IRON BOND,
FOR BUILDING PURPOSES.
ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES
Beyond the current Price of Hoop-iron.



Gauge.	In. wide.	Per 1,000 ft.
No. 16	1¼	78. 4d.
15	1½	78. 6d.
15	1¾	88. 0d.
15	2	88. 4d.
15	2½	98. 6d.

THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ inches) is now being extensively used in the leading GOVERNMENT WORKS, DOCKS, BUILDINGS, BRASS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the kingdom.



Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.
London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

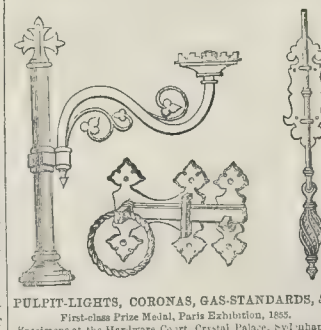
MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Groving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, shipbuilders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches, and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application, KING'S-ROAD, CHELSEA.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.



HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea. HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be efficiently warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 16s.—93 and 95, High Holborn.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,

London.

PULPIT-LIGHTS, CORONAS, GAS-STANDARDS, &c.
First-class Prize Medal, Paris Exhibition, 1855.
Specimens at the Hardware Court, Crystal Palace, Sydenham.
Illustrated Price-catalogues post free on application.

WOOD-CUTTING MACHINERY,
JOHN M'DOWALL and SONS,
WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow,
MANUFACTURERS of VERTICAL SAW-FRAMES
(driven by strap),
For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.

Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached, circular cross-cut radial sawing machines; patent portable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from ¼ of an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power morising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-board machines, for hat-boxes, &c.; patent silent feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first class workmanship. Mr M'Dowall has been in the engineering and millwright business for upwards of 36 years, but during the last 21 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work, without regard to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe. Applications as above for further particulars, will be promptly attended to.

TO ARCHITECTS AND BUILDERS.
HAWKINS'S REGISTERED COPPER and TINNED IRON SASH-CHAIN is greatly approved for its strength, durability, and facility in running over pulleys; and when work'd at its warranted load, will be found one of the most useful and efficient inventions for hanging window sashes of any weight up to 4 cwt.—May be obtained from every respectable ironmonger in the kingdom. Manufactory, No. 27, Dale-end, Birmingham.

LOSH, WILSON, and BELL,
NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Sise-lane, London.

FENDERS, STOVES, and FIRE-IRONS.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of Fenders, Stoves, Ranges, Fire-irons, and General Ironmongery as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Steel Fenders, in all sizes, with bronzed ornaments and two sets of bars, 2l. 14s. to 5l. 10s.; ditto, with ormolu ornaments and two sets of bars, 3l. 10s. to 12l. 12s.; Bronzed Fenders, complete, with standards, from 7s. to 3l.; Steel Fenders, from 2l. 15s. to 6l.; ditto, with rich ormolu ornaments, from 2l. 15s. to 7l. 7s.; Fire-irons, from 1s. 9d. the set to 3l. 4s. Sylvester and all other Patent Stoves, with radiating hearth-plates. All which he is enabled to sell at these very reduced charges,
Firstly—From the frequency and extent of his purchases; and
Secondly—From those purchases being made exclusively for cash.
Illustrated catalogues sent (per post) free.
39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN STREET; 4, 5, and 6, PERRY'S-PLACE, London. Established 1820.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given. J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

TESTIMONIALS.
"Commercial Mills, Cornbrook, Manchester, Oct. 6, 1854.
"GENTLEMEN,—We have been using almost exclusively, for the last three years, your Packing to our stuffing boxes and steam and water joints, previous to which time we tried all the sorts which came under our notice, but yours we consider decidedly the best and most economical.—We are, yours respectfully,
"JOSHUA SCHOFIELD and SONS."
"King and Queen Iron Works, Rotherhithe.
London, Nov. 11, 1854.
"GENTLEMEN,—We have tried your Patent Packing for some time in our steam-engines, and also in steam-pipe joints, and find it different and economical, and to be much superior to the ordinary hemp packing. It is especially serviceable in the slide valve. Yours truly, "HOWARD RAVENHILL and CO."
"Works, Deptford, Jan. 29, 1856.
"I have pleasure in stating that the Packing of Messrs. S. W. Silver and Co. has been in use in the various parts of the engines on board the steam-ships of the company, and given every satisfaction. "J. BEARDMORE, Engineer,
"General Steam Navigation Company."
Copies of further testimonials forwarded, on application to S. W. SILVER and CO. Nos. 3 and 4, Bishopsgate-street Within, opposite the London Tavern.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opposite to the Monument, London-bridge. Established A.D. 1700.

TO BE SOLD, a capital 14-inch centre ENGINEER'S LATHE, with self-acting motion, slide traversing screw for screw cutting, change wheels, &c.; the bed long enough to take a shaft 12 feet in length, and gap in the bed to turn anything up to 4 feet diameter, cone pulleys, and counter shaft.—For particulars apply to Messrs. EA-TON and AMOS, Grove, Southwark; or to Messrs. SPOTTISWOODE and CO. New-street-square, where it may be seen.

CIRCULAR IRON STAIRCASE WANTED, 11 feet in height, for which a reasonable price will be given.—Apply by letter, 43, Cheapside.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cocks, Nozzles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

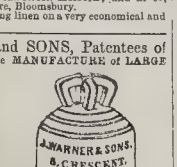
WARMING and VENTILATING.—ALFRED MAY begs to call the attention of Architects, Builders, and others to his system of WARMING by HOT WATER, Lunatic Asylums, Workhouses, Churches and other Public and Horticultural Buildings, Mansions, and Offices.

A. M. having had great experience in the above line, is enabled to guarantee the efficiency of such works as may be intrusted to him for execution; he has just completed, to the entire satisfaction of the architects, the warming and ventilation of the Baron's and Sir Anthony Rothschild's new mansions and conservatories.

Manufactory, Eagle-court, Benn-street, Holborn; and at 50, Devonshire-street, Queen's-square, Bloomsbury.

Artificial heat applies for drying linen on a very economical and effective system.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system which give superior tone and facility for ringing.

SAVING IN GAS.—D. HULETT, INVENTOR and PATENTEE.—The Mercurial Gas Regulator is the only efficient instrument for ensuring wholesome and uniform lighting, equalising the pressure, and preventing any irregularity in the height of the flame.—D. HULETT and CO. 85, High Holborn, London, Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

IRON CHURCHES, STORES, &c.—For SALE, Substantial Corrugated Iron Stores, Churches, Dwelling-houses, and every description of Buildings, adapted to all climates. Iron Roofs constructed for all parts of the world. An Iron Church with sittings for 750 people, for hire or sale.—To view and for further particulars apply to SAMUEL HEMMING, Cliff House Works, Bow, London.

Vein, in blocks of ordinary dimensions, 8s. 6d. per foot cube.	
Sicilian	,,

An inspection of their well-assorted stock is solicited, at "The Depôt," Bridge-wharf, Millbank, adjoining Vauxhall-bridge.—Apply only to Mr. BAXTER, Wharf Foreman.

WILLIAM W. BONNIN, Secretary.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY-PIECES lately imported from the Continent. They comprise Statuary, Giallo di Sienna, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Brindisi, and other choice foreign marbles, and are designed with great taste, and executed by first-class artists. On sale, in the show rooms of Messrs. EVANS, SON, and CO., King William-street, London-bridge.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble, solid, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Bottom's Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c. Jobs wholly executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BANGOR WHARF, King's-road-bridge, Camden-town.—SPRINGFIELD and COOPER late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime; watered hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted

BRAMLEY FALL! BRAMLEY FALL! On account of greater facilities than possessed by any one else, TRICKETT and PERKINS are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawksworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of the same quality as the well-known Old Bramley Fall and Horsforth Quarries, but has the advantage of being of a lighter and more uniform colour. The North-Eastern Railway Company have put sidings in on both sides of the railway. Powerful cranes are fixed, so that the stone can be got to any acre, and the stone being loaded in the quarries on the railway-trucks, can be forwarded the same day to any part of the kingdom, or supplied in London river *viâ* Selby or Hull, in any quantity.—For particulars apply to JOHN TRICKETT, Stone Merchant, Headingley, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering bases, plinths, templates, sills, corbels, imposts, cornices, copings, steps, staircases of all kinds moulded or plain, square or spandril, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed or stowed, and delivered direct in one handling to vessel or railway truck.—Prices and every information given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone-wharf, Isle of Dogs, or to JOHN TRICKETT, Headingley, Leeds, Yorkshire.

ANCASTER STONE. JOHN WILSON begs to inform Architects, Builders, &c. that having introduced additional and powerful MACHINERY into the ancient Ancaster quarries, he can contract to supply large quantities of STONE, daily. The durability of the ancient Ancaster stone (which has been extensively used in the erection of churches, mansions, factories, &c. and has for centuries withstood all exposure) renders it a great saving of labour in working, are too well known to need much commendation.—Address, Mr. JOHN WILSON, Station-road, Grantham

GAZEBY STONE from the original Quarries, in blocks and steps. 2,000 feet in stock at BROWN and BOOTH'S, 42, Backside, Southwark.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 54, Old Broad-street. Manager—JAS. J. CHAPMAN, Liskeard
This Granite is selected for the New Westminster-bridge.

WELSH GRANITE.—The Welsh Granite Company, Carnarvon, supplies Pitching or Paving Sets of this Material to order The Sets, which have for several years been extensively used in Manchester, Bristol, and other large towns, combine in a higher degree than any others, the qualities of toughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings, and for mill-stones; it will also take a fine polish.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Left's Wharf, Waterloo-bridge. Office: 248, High-street, Southwark, near the Townhall

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, LONDON.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. COLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER.

Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

STONE! STONE! STONE!—To the TRADE. The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Self-face Slab, Granite Kerbing and Curb, Guernsey and Aken Road Materials, and every other description of stone, at JOHN KNIGHT and SON'S, Devon Wharf, Millbank. York tooled paving, 38s. 6d. per 100 feet; slab for hearths, 4d. per foot sup.; slab for chimney-pieces, 3½d. per foot sup.; 8 by 3 window-sills, 6d. per foot run; 13 by 3 coping, 8d. per foot run; box chimneys (any opening), 8s. 6d. each. Terms cash on delivery.

TO CONTRACTORS AND OTHERS.

YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS; Hare-hill, Robin Hood, Park Spring, and Gaypby, in Blocks, Headstones, or Slabs; Purbeck Paving, Sinks, Curbs, Rickstones, Pitchers, and Squares; Caithness Flags, Firestone, Newcastle and Bolston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Caen Stone, Bramley Fall, Bath, Huddlestone, Park wood, and other Block Stones. Valentia Slate Slabs, Bangor Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble, in Block and Slabs, supplied from the Wharfs, Millbank-street, City Basin, and Deptford; also direct from the quarries by vessel or rail.—Address, FREEMAN'S WHARF, 97, Millbank-street, Westminster.

ROWLEY RAGSTONE and YORKSHIRE STONE, for paving and road-making, at GEORGE C. RILLANDS', Hailstone Wharf, Crescent, Barnsbury-road. Paving executed by experienced workmen. Board of Works and Contractors supplied with Ragstone direct from the quarry.

BATH STONE.—HENRY STONE, having understood that some parties have been offering for sale a sort of stone, calling it Hampton Down, H. S. begs to inform Architects, Builders, and others, that he is the only person that can supply that article. Having, about two years since (at a considerable expense) opened the Down Hampton Down Quarries he is happy to state that he can now supply that stone to any extent. Since opening the quarry, H. S. has supplied a considerable quantity of it to several churches and other public buildings. COMBE DOWN and BOX GROUND WEATHER STONE on the most reasonable terms. Residence, WIDCOMBE, BATH. Cargoes shipped and delivered to any part round the coast.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other decoration that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental slabs for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 149, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Hertfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, blue and green, of the usual sizes, which they are prepared to supply on the usual terms, for shipment from their depôt, at Bangor, or to transmit by railway. Also Slabs of all sizes.—Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1838.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by steam power, laid down in the best manner, or supplied in any quantity. Information for using forwarded with material. Post-office orders or reference in London promptly attended to.—Estimates given for every kind of the above work.

ASPHALTE.—THOMAS HARRISON, having completed his works for making by steam-power, is now in a position to execute orders for BLOCK ASPHALTE to any extent, at an hour's notice. Asphalte expressly prepared for barn and granary floors, and every description of agricultural buildings, for laying which plain instructions will be forwarded. Estimates given for every variety of Asphalte Pavement, Manure and other Tanks, Sea-Walls, Railway work, &c.—The trade supplied on advantageous terms.—THOMAS HARRISON, Asphalte and Whiting Works, Cambridge-heath Wharf, Hackney; and Sunderland Wharf, Rotherhithe.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, White-friars, Fleet-street, City, Sheds, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for quick loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.
N.B. This wharf is very near the St. Margaret's Estate.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale 50 to 100 Cubic Yards of Screened Gravel For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

NEW WORKS
PUBLISHED BY
WILLIAM BLACKWOOD and SONS.

1.
PROFESSOR AYTOUN'S NEW POEM.
This day is published,
BOTHWELL: a Poem. By W. EDMONDSTOUNE AYTOUN, D.C.L. Author of "Lays of the Scottish Cavaliers," &c. In One Volume 8vo. Price 12s. handsomely bound in gilt cloth.

2.
PROFESSOR WILSON'S WORKS.
This day is published, Vol. I. price 6s. of
ESSAYS, CRITICAL and IMAGINATIVE. Contributed to "Blackwood's Magazine" by PROFESSOR WILSON. Being Volume I. of the Uniform Edition of his Works. Edited by PROFESSOR FERRIER.
CONTENTS.
Streams.—Modern Greek Art.—Byron in Death.—The Pet.—Gymnastics.—Archbishop Sharpe.—Time.—Health and Exercise.—On Early Rising.—Old North and Young North; or, Christopher in Edinburgh, and Christopher in London.—The Man of Ten Sabbaths.—Lines on Peter Robertson, of the Temple.—The Young Lady's Book.—Lays Departed.—Bauwald-Lhuid.—Wordsworth.

3.
PROFESSOR WILSON'S NOCTES AMBROSIANÆ. In Four Volumes, with Gregory and Lucas, price 24s.

4.
A NEW AND ENLARGED EDITION.
This day is published,
THE PHYSICAL ATLAS of NATURAL PHENOMENA. By ALEX. KEITH JOHNSTON, F.R.S.E. &c. Consisting of Forty-eight Imperial Quarto Plates, printed in Colours; and One Hundred and Forty-five Pages of Letterpress, with Index containing upwards of 16,000 References. Complete in one vol. half-bound, price 3l. 3s.; or in Eight Parts, price 12s. 6d. A Prospectus of this Edition, with List of Maps sold separately, may be had of the publishers.
"There is no map in this noble Atlas upon which we might not be tempted to write largely. Almost every one suggests a volume of reflection, and suggests it by presenting, in a few lours, accurate truths which it would be the labour of a volume to enforce in words, and by bringing them, at the same time, upon the memory with such distinctness that their outlines are not likely afterwards to be effaced."—*Examiner.*

5.
THE SKETCHER. By the Rev. JOHN EAGLES, M.A. Oxon. Originally published in "Blackwood's Magazine." 8vo. 10s. 6d.

6
CHEAP EDITION.
LADY LEE'S WIDOWHOOD. By Lieut.-Colonel HAMLEY. A New Edition, complete in One Volume, with Engravings. 6s.

7.
THE HISTORY of GREECE under OTHOMAN and VENETIAN DOMINATION. By GEORGE FINLAY, Esq. LL.D. Author of "Greece under the Romans." "History of the Byzantine and Greek Empires," &c. 8vo. price 15s. 6d.

8.
ELEMENTARY ARITHMETIC. By EDWARD SANG, F.R.S.E. Author of "Life Assurance and Annuity Tables," "A New General Theory of the Teeth of Wheels," &c. &c. &c. The Exercises annexed to supply the great desideratum—an Arithmetical Manual of a routine course of instruction in Arithmetic.
45, George-street, Edinburgh; 37, Paternoster-row, London.

MURRAY'S HANDBOOKS for ENGLAND.
The following are now ready.
1.
HANDBOOK for WILTS, DORSET, and SOMERSET. Map. 6s.
2
HANDBOOK for DEVON and CORNWALL. Maps. 6s.
3.
HANDBOOK for MODERN LONDON. Map 5s.
4
HANDBOOK for WESTMINSTER ABBEY. 1s.
JOHN MURRAY, Albemarle-street.

The premium for the advance is added to the principal, and not required to be paid down.
The interest payable is 5l. per cent. and only upon the amount remaining unpaid each year.
Forms of tender, prospectuses, and further information at the Office, or by letter addressed to
HENRY J. PHILLIPS, Secretary.

TIMBER BENDING PATENTS COMPANY (Limited). Incorporated under Joint Stock Companies Act, 1856. Capital, 100,000l. in 20,000 Shares of 5l. each. Deposit 2s. per share.
DIRECTORS.
Captain L. B. Mackinnon, R.N. 4, Hyde-park-place, Chairman.
J. H. Draper, esq. 31, London-wall.
Richard Remington, esq. 23, Old Broad-street.
William James Robertson, esq. Kilburn Priory.
With power to add to their number.
BANKERS.
Sir Samuel Scott, Bart. and Co. Cavendish-square.
Bank of London, Threadneedle-street.
Solicitors—Messrs. Tyrrell, Paine, and Layton.
Auditors—Messrs. Charsley, Cormell, and
Brokers—Messrs. Hicheps, Harrison, and Co.
Offices—GRESHAM HOUSE, Old Broad-street.
The object of this Company is to purchase two patent rights of inventions for bending timber.
By the process, the subject of these patents, timber can be bent into ships' timbers, and into all forms required for marine purposes; also into wheels, furniture of all kinds where curves are introduced, arches for ordnance and army purposes, hoardes, roofings, boats, &c.; different varieties of wood can be combined to the required form with ease and expedition.
The importance of this invention, to which the Directors of the Timber Bending Company desire to call the attention of ship-builders, can hardly be over-estimated, for it effects great saving of time and money in the manufacturing of wood, a raw material which, from its increasing employment, ranks next to cotton and iron in the amount of capital it engages, and the variety of purposes for which it is used.
The Directors have fully investigated the merits of the invention, and submit the following statement, based on reports from practical and scientific men (W. Fairbairn, George Rennie, Dr. Hooker, &c.), as a confirmation of their opinion as to its great value and importance:—
The strength of the wood is much increased by the operation at the patent, and prepared in the form as not in any way injured; the wood becomes almost impervious to damp, whilst its increased density renders it less liable to take fire; its rigidity, hardness, and durability are increased.
The present expensive method of cutting and shaping timber will be superseded, and an actual saving of from one to three-fourths of the material will be made by employing this invention.
The present method of bending timber is exceedingly limited, expensive, and by no means satisfactory, while those parts of the wood where the curvature is greatest are rendered invariably the weakest; whereas, by the new system, timber of any description, and of almost any size, can be bent inexpensively, with the most perfect results, and a great increase of strength at the very point where strength is most required.
The benefits which cannot fail to accrue from its use are important, and will materially add to the durability of the timber, together with economy of material, labour, and capital. These advantages must ensure the adoption of the process by shipbuilders for ship timbers, futtocks, &c.), carriage-builders, and wheelwrights; house builders, manufacturers of agricultural implements, furniture-makers, coopers, modellers, &c.; while the invention will be invaluable in the construction of public and private buildings, more particularly in the erection of ecclesastical edifices facilitating, as it will, the formation of domes, arched roofs, &c.
Specimens, sufficient to exhibit the efficacy and power of this invention, is erected and ready for use, and can be seen on application to the Secretary.
It is at present proposed to confine the operations of the Company to the sale of machines and to the granting of licences, upon payment of a royalty, from which sources it is confidently expected a large income will be obtained. The sale of licences has already commenced, and will be continued during the formation of the Company, for the benefit of which it is.
The owners of the patents are to receive 12,000 paid-up shares for all interest in the patents for Great Britain and Ireland. The remainder of the capital will be applied to the general business of introducing the invention into the chief cities and ports of the United Kingdom.
Prospectuses and forms of applications for shares may be obtained of the Secretary, at the Offices of the Company, Greshamhouse; or of Messrs. HICHENS, HARRISON, and CO. 21, Threadneedle-street.
Applicants will be required to pay the sum of 5s. per share on the shares applied for, to Sir SAMUEL SCOTT, Bart. and CO. or the Bank of London, to the credit of the Company, when a amount will be retained on account, and a further sum of 15s. on allotment. The remaining 4l. will be called up at such periods and in such manner as the Directors may appoint. Should not all the shares applied for be allotted, the amount deposited in respect of those refused will either be returned, or credited to the applicant, on account of the above sum, of 5s. per share on the shares allotted.

MANUFACTURING PREMISES in Frederick-street, Hampstead-road, TO BE LET or SOLD, adapted to a builder, coach-maker, cab or omnibus proprietor, cooke-per brewer, distiller, &c. They are fully 84 feet by 54 feet, with open yard and water, gas, and excellent offices as well, with dwelling-house attached.—For particulars apply to Mr. HURRELL, No. 10, Frederick-street, Hampstead-road.

WANTED, within a mile of Somerset House, for the occasional meetings of a Scientific Society, usually about nine times a year, a ROOM, capable of accommodating at least 100 persons, with a small room attached, for the meetings of council.—Address, with particulars and terms, to J. W. 21, Regent-street.

The Builder.

Vol. XIV.—No. 705.

MORNING may be spent very profitably in the newly-arranged *Ceramic Court* in the Crystal Palace, at Sydenham. The Greek term from which "ceramic," or, more strictly, "keramic," is derived, was applied to every sort of manufacture in which plastic clay was used, whether bricks or vases. We accordingly find in this collection the rude pottery of the Celts, the Mexicans, and the Peruvians; the mortuary vases of the Italo-Greeks, and the unglazed pottery of Rome, as well as the exquisite enamelled work of Luca della Robbia, the Majolica ware of the Renaissance, and the delicate productions of Sèvres. In many respects it is a collection of value unprecedented as a public exhibition. There are illustrations of a class such as many manufacturers never saw before, and which they had not considered within the capabilities of the manufacture; and the publicity given to these will be greatly influential in aiding the progress of this branch of our manufacture.

Hereafter, we shall hope to see the collection made more complete with regard to terra-cotta as applied to architectural decoration, the study of which could scarcely fail to produce good results. Taste gives value to the commonest material. A pound of clay touched by a cunning hand is made worth much more than that weight of gold. As an enthusiastic Frenchman of the beginning of the last century wrote of Fayence ware, —

> "Mieux que l'or elle garde et sa forme et sa grace,
> Sur l'argile jamais la couleur ne s'efface:
> Non, le temps qui détruit la pierre et le métal,
> Ne sçauroit altérer ni l'azur, ni l'émail."

Let us look at the modern art a little historically. When the Crusaders had taken Majorca in the twelfth century, they brought Moorish pottery into Italy, and porcelain plates, part of the spoil, are found decorating the façades of buildings in Pisa and elsewhere. No attempt to produce similar pottery was made for a long time: the earliest specimens of Majolica made in Italy belong to the fourteenth century. Coloured plates of earthenware were made at Pesaro about that time, for the express purpose of decorating the fronts of churches. It was at the end of this century that Luca della Robbia, to whom ceramic art is greatly indebted, began his experiments. Luca was born in 1388, and was one of the sculptors employed on Giotto's Campanile, at Florence. Ultimately he gave up working in marble and bronze, and devoted himself wholly to terra cotta. His frieze of The Singers, in another part of the Crystal Palace, is of itself sufficient to give him fame as a sculptor. The improvement in ceramic art introduced by Luca della Robbia, consisted in the use of a thin opaque glaze in place of the old clay veneer. The glaze was produced by tin and sand, with a small quantity of antimony and other metals. His nephews carried out his process to the sixteenth century, and when they died, or soon after, the process was forgotten.

An artist known as Maestro Giorgio initiated a series of processes which greatly benefited the art. "Their chief peculiarity," says Mr. Wyatt, "is that of a very simple body, covered with tin enamel, and floated over with a white glaze, on which, in free colours, the artist painted a design, the draperies of which glow with a brilliant ruby colour, the secret of the preparation of that pigment being known only to himself. On the completion of the painting, the whole was frequently covered with a strong colourless glaze, almost identical in appearance with that forming the surface of the celebrated terra-cottas of Luca and Agostino della Robbia."* The son of Master Giorgio carried his father's processes to a yet higher perfection. Giorgio's, and similar wares, attained their greatest degree of popularity between 1520 and 1560, when the designs of Raffaelle and Julio Romano were transferred to plates and dishes.

The collection of M. Soulages, of Toulouse, which has been obtained for this country at the price of 11,000*l.* by the guarantee of a number of lovers of art, will be found, according to the report of Mr. Webb, who valued it, to contain "specimens of most of the celebrated potteries of Italy: amongst them will be found no less than fifty-two plates and dishes attributed to Maestro Giorgio, one quite unique, and of great value, representing the portrait of Perugino, after a drawing said to have been furnished by Raffaelle to the fabric at Urbino; also various interesting vases and cups of the same character, one of which is of the rarest beauty." "The Palissy ware, though confined to a few specimens, boasts of a ewer or vase remarkable for its finish, beauty, and colour; and the like is not now to be met with. In every section, indeed, there is something to mark a superior character to anything that can be obtained at the present moment."

Bernard Palissy, just named, must not be overlooked in our sketch: some specimens of his ware are in the new Court, and will serve to recall the memory of a man of rare talents and of great perseverance. Every one has heard how that, having spent all the money he had borrowed to construct a new furnace, he burnt the floor-boards of his house and his own furniture, to carry on experiments: and how he persisted, in spite of the lamentations, not to say abuse, of his wife, and ultimately achieved fame and fortune. Becoming a Protestant, however, he was thrown into the Bastille, where he died in 1589, at the age of ninety. In the fine collection at the Hôtel de Cluny, Paris, there are numerous specimens of the curious and well-known ware more especially characteristic of him, which shows plates and dishes covered with objects in relief and coloured, intended rather as sideboard ornaments than for use, since to eat a dinner off a plate occupied by a fish, a snake, a dozen shells, and sea-weeds *ad libitum*, all hard and in high relief, could scarcely be convenient at any period.

Palissy was a naturalist, it should be noted, and moulded his works from nature. He adhered scrupulously, too, to the shells, reptiles, and plants of the Paris basin. At the sale of the Bernal collection, one of his dishes, 12 inches across, with a lizard in the centre, was sold for 162*l.*! This might have comforted his wife in her distress, if she could have foreseen it.

Majolica ware now brings fabulous prices. Plates have been thought cheap at 50*l.* a-piece, and a dish, 15¾ inches in diameter, was knocked down at the Bernal sale for 142*l.* It is true this had the metallic lustre, and bore the mark of Maestro Giorgio, the artist. Think of a Sèvres cup and saucer being worth 160*l.* and a small vase and cover, 87*l.* 10s.! At all events, these were the sums paid for two such lots at the same sale. Four Sèvres vases, not many inches high, brought at the sale of the same collection, the enormous sum of 3,360*l.*; and the Queen has three small vases, for which a dealer once told us he would willingly give 4,000 guineas! We are getting on, however, a little too fast.

The first European porcelain manufactory was at Meissen, near Dresden, under the direction of John Böttcher, originally an apothecary's assistant, at Berlin. It was a little before 1706 that he discovered the composition of porcelain. He was appointed director at Meissen in 1710, and succeeded in making perfect porcelain in 1715. His life is a romance. He is described as keeping his workmen awake during experiments in the furnace, which lasted three and sometimes four days, by his gay and rattling conversation.* The proceedings at the manufactory were concealed with the greatest care, and every workman was sworn to secresy: one of the foremen, however, escaped to Vienna, and the secret spread over Germany.

The French term, *Faience*, or *Fayence*, under which term Majolica ware was included in France, is derived by some from Faenza, in Italy, and by others, amongst whom we are disposed to place ourselves, from Fayence, in the department of the Var, not far from Cannes, in France. The authorities on the question, such as they are, are quoted by Mr. Marryat in his "Collections."

It was only 100 years ago—namely, in 1753—that Louis XV. who had become interested in the success of a new establishment possessing the secret of the composition of *Pâte tendre*, or soft clay, took a share in the concern, and conferred on the works the title of the Royal Manufactory. In the following year the operations were transferred to Sèvres, where a large manufactory had been erected for the purpose; and in 1760 the king paid off his partners and became the sole proprietor. The precise admixture of the material, which was a vast improvement over that of the Italian Majolica ware, engrossed the attention of the best chemists of France, and its adornment was confided to the best artists. A change was now about to be made in the material. A long-pursued examination of Oriental china, which was imported into Europe at the beginning of the sixteenth century, led to a knowledge of its constituents, kaolin and feldtspar; but it was not till the commencement of the eighteenth that the proportions in which these were mingled, and the sources from which similar materials could be procured, were determined. Manufactories were then established in Dresden and Vienna. Accident showed that there was a good supply of kaolin at Saint Yrieix, in France; and in 1768 the fabrication of *porcelaine dure* was established at Sèvres, and soon superseded altogether the *porcelaine tendre*. Maintained at the cost of the state, and prosecuted solely with a view to the credit of the country, works of great beauty and value have been produced there.

The exhibition of the specimens comprised in the collection at Sydenham cannot fail to aid materially the progress of English manufacture in a branch of art which has of late years made important advances. Many of the works are of a character rarely if ever submitted to public inspection, and which have hitherto been confined to the cabinets of the connoisseurs. Their almost fabulous value, and the fragile nature of their material, made it a matter of doubt whether such a collection could be formed; but this has been accomplished by the assiduity and management of Mr. Thomas Battam, and it affords a gratifying proof of the growing disposition on the part of collectors of rare works of art, to allow the educational influence they possess to be made available for the purposes of national improvement.

The Court itself is divided into two compartments, which are thus appropriated: — The inner space, which is on the terrace side of the building, is devoted to an historical collection

* "Industrial Arts of the Nineteenth Century."

* Marryat's Collections towards a History of Pottery and Porcelain. Murray.

of Pottery, chronologically arranged. The outer space, opening on the nave, contains a selected epitome of the finest works of various manufactures, so grouped as to present their beauties and peculiarities most favourably. The historical collection contains examples of the ancient and modern pottery of Egypt, of the early Etruscan ware from Chiusi, lent by Sir Gardner Wilkinson, and Italo-Græco and early Peruvian, from the collection of Arthur Anderson, Esq.

The examples of the Italian Majolica are very numerous and valuable. They illustrate the manufactures of Pesaro, Castel Durante, Faenza, Gubbio, and Urbino; in the works of Andreoli, Maestro Giorgio, Orazio Fontana, Patanazzi, and others. The specimen of the gold and ruby lustres of the inventor, Giorgio, are of extraordinary brilliancy. The greater portion of these examples are from the private collection of Mr. Isaac Falcke.

There are also examples of the enamelled ware of Lucca della Robbia, an interesting series of the stone pottery of the Rhine (fourteenth century), and illustrations of the works of Bernard Palissy.

An interesting series of the early pottery of Staffordshire, lent by the committee of the Stoke-upon-Trent Athenæum, will be arranged in a few days.

In porcelain, the examples include those of the Oriental era, illustrated by vases and miscellaneous articles, lent by the Duke of Devonshire and Lady Rolle. One pair of vases, about 5 feet high, lent by Mr. David Falcke, are very important works; as is also a large vase of Oriental enamelling on copper.

Porcelain of Persia; Böttcher's first porcelain, made at Meissen (red); and that subsequently produced at Nymphenburgh, will also be found.

The French commence with examples of the first soft porcelain of St. Cloud, Chantilly, Sèvres (both soft and hard), Tournay, Courbelle, and Angoulême. Lady Molesworth has lent several valuable examples of Capo di Monte, Nymphenburgh, Dresden, and Chelsea porcelain.

Let us now look specially into two or three of the cases which illustrate more particularly those portions of the history of the art we have sketched.

Of *Dresden* china there are numerous valuable examples, in groups of figures,—birds life size—and vases. It will be observed that the figure painting of the Marcolini period is especially fine. The group of Apollo and the Muses is a very important example of this manufacture. So is the group representing the Temple of Bacchus, with figures of Bacchus and Ariadne, and Fauns, formerly used as a plateau upon the tables of the Electors of Saxony.

Of the *Vienna* work there are some examples wherein the figure painting is of high quality. The gilding in some of these specimens, both as to style and its peculiar manipulation, stands quite alone in its excellence. Some of our leading manufacturers should study this work and turn it to account. We are aware that gilding so executed must be costly, but we feel assured that, produced with equal success, it would find purchasers. It is surely worth the trial.

The *Berlin* specimens display figure painting of great merit,—highly elaborated. It is in this respect that we fail comparatively. Our material and our glaze are as good, but we cannot command artists for the painting.

St. Petersburgh supplies a pair of very large vases, more than 3 feet high, presented by the Grand Duchess to Lady Rolle, by whom they are lent. These exhibit painted subjects of considerable merit; doubtless, however, the products of artists from Sèvres.

Of the *Sèvres* manufacture there are numerous works of the very highest class and value, including the *pâte tendre* of old Sèvres. The figure paintings, portraiture, and jewelled designs upon this ware, from the collection of General the Hon. Edward Lygon, are of the rarest excellence. Compare them with the best of the recent works in England, good as these are, and the great beauty of the former is made more apparent. Mr. David Falcke has lent several pieces of the celebrated service of *pâte tendre*, executed at Sèvres by order of Louis XVI. and exhibited at the Fête of Versailles in 1783. The figure painting is by Popon and Guet. Corresponding pieces are in the possession of her Majesty, at Windsor Castle. Several of the plates exhibited cost 250 guineas each. General Lygon's larger dish would probably fetch 600 or 700 guineas. The smaller dish, jewelled Sèvres, is a most brilliant specimen. The little teapot, too, with a female head upon it is a gem.

Some specimens of the *Fulham* ware and *Chelsea* ware serve as reminders of attempts which were not met by the public as they should have been, and, conjoined with the works of Wedgwood, must make all regret that, so much having been achieved in England, the art was suffered to collapse.

The manufactory at Fulham, was established in 1684, by Mr. John Dwight, an Oxfordshire man, who had a patent for certain wares. The proprietor at Chelsea, was a silversmith by profession: he has left on record a memorial, setting forth, that unless the law against the admission into England of foreign china otherwise than for private use be enforced, any attempt to establish a manufactory there, including that at Chelsea, must be ruined. The works at Chelsea were established in the middle of the last century. Several fine examples now exhibited will stand comparison with foreign works of the same period. One pair of vases, about 30 inches high, of *gros bleu*, with gold birds, are very remarkable, both for size and quality. These are lent by W. Pole Thornhill, Esq. M.P. The gilding in the Chelsea specimens is very good.

Then we find some examples of *Early Worcester*—a manufacture which also takes a high position. The figure-painting on some of the examples is extremely good—fully warranting the early fame attaching to this manufactory. This fame, judging from the admirable specimens sent by Messrs. Kerr and Binns, the present proprietors, is likely to be revived and extended. Their jewelled ware is of the highest class of excellence. In their adaptations of the Limoges enamelling upon porcelain, including the duplicate of a tazza executed for her Majesty, the drawing is admirable. These works are, of course, costly: the plates are priced at about 25 guineas each.* These manufacturers have been at large expense in training artists to this work, and it is hopeless for them to expect a remuneration unless its excellence receives a public acknowledgment.

The career of Wedgwood, at Burslem, in the middle of the last century, was an extraordinary one: he brought the art of a Flaxman to bear on clay for domestic purposes, and gained for his manufacture before he died (in 1795) a world-wide reputation. Examine carefully the two cases here of what we may call Wedgwood-Flaxman ware; notice the beauty of the designs, the grace and elegance of the modelling. Some of the cameos are as delicate as if executed in wax. There is nothing in the Court more purely beautiful than these works, and their value commercially is considerable: one of the cups and saucers in the collection cost eighty guineas.

Foremost in the collection of modern works, evidences of the successful endeavours which have been recently made in England to retrieve our position in the art, are the productions of Minton and of Copeland, productions which in the Paris Exhibition showed, whatever might be the case with respect to the very highest branches of the art (for the promotion of which abroad Government care in training and Government subsidies have been long applied), that in wares which administer to the comfort and enjoyment of the masses the English manufacturers were superior. In 1850 Mr. Minton, to whom pottery in England owes so much, was led, by becoming possessor of a frieze ascribed to Lucca della Robbia, to make many endeavours to imitate the material, and was very successful in his endeavours. He exhibits on the present occasion very excellent samples of majolica ware, vases, tripods, and figures. Mr. Copeland has a vase 5 feet high, which, so far as regards the material and the firing, is an achievement. The service of jewelled ware executed for the Queen is beautiful, and the specimens of *gros bleu*, with Grecian designs in gold, should not escape notice. Amongst the works in statuary porcelain, the early development of which is due to the Art-Union of London, the bust of Clytie, the full size of the original in the British Museum, may be pointed to as a remarkable production.

With a word of praise to Messrs. Ridgway and Bates, for their ordinary ware, some of which is excellent, and to Mr. Battam for his successful exertions in forming and arranging the collection, we must here terminate our notice. We have said enough to show that we consider this exhibition likely to assist materially the progress of Ceramic art in England, and we commend it heartily to the serious consideration of manufacturers, the Government, and the public.

* The Shakspeare dessert service, exhibited by the same firm, although open to criticism, demands commendation as a most praiseworthy effort.

THE ARCHÆOLOGICAL INSTITUTE IN EDINBURGH.

The meeting in Edinburgh must be considered a successful one. Many valuable papers were read, and the temporary museum contained a number of rare and interesting matters, making all necessary deductions for the "Cromwell Pot," called Bruce's helmet, and the flint musket, exhibited as the identical weapon with which Hamilton of Bothwellhaugh shot the Regent, in 1573. This may have been the musket used in Mr. Angelo Slous' play, founded on the occurrence, but could scarcely have been handled by the veritable Hamilton.

The weak place in the conduct of the congress was that with reference to the excursions. These were ill-managed, and have led to many complaints. Without attempting to give any connected account of the proceedings, we note some of the communications likely to interest our readers. Mr. Robert Chambers gave great assistance, and hospitality was not wanting. At the opening meeting, after Lord Talbot de Malahide's speech, Dr. Collingwood Bruce read a paper showing the advantages to be gained in practical every-day matters from the study of antiquities. "The Romans," said he, "were great builders. Many of their works which have come down to our day are remarkable for their magnitude and their durability. How vast a structure is the Coliseum at Rome—how very remarkably do the lofty walls of Richborough and Pevensey hang together. One cause of the durability of their erections is the excellence of the mortar which they employed. If we had studied their method of making and using it, our buildings would not have the tendency to fall to pieces which they have. I have been informed that when the Durham County Prisons had been built at very great expense a gentleman requested to be locked up in one of the cells, and to be furnished with a piece of an iron hoop. In the course of an hour he liberated himself. This he could not have done if the mortar had possessed a proper degree of tenacity. The necessities of our present railway system have compelled our engineers to pay attention to the subject of mortar, and in all our great works a material is now used as good as that which was prepared by the Romans; but a study of antiquities would probably have caused the revival of this important part of the craft of a builder to have been earlier effected. When the station of Hunnum on the wall of Hadrian was being pulled to pieces some years ago, an eminent architect in Newcastle, Mr. Dobson, carefully examined the buildings which it contained. He noticed with considerable interest the mode in which the flues were brought up the sides of the walls from the hypocausts below. The hint was not lost upon him. He was at the time engaged in building a house in a damp situation, and he was anxious to devise some means of preventing the wet forcing itself through the walls. He at once resolved to substitute a thin brick wall instead of the ordinary wooden stoothing on the inside of the main stone wall, leaving a small space between them, but tying them together at intervals. The plan answered admirably, and he has adopted it ever since. He named it to Mr. Smirke, who also adopted it.

ANCIENT EDINBURGH.

In the evening, Mr. Robert Chambers read a paper on "The Ancient Buildings of Edinburgh and the Historical Associations connected with them." Mr. Chambers said Edinburgh was not a town of much consequence till the latter part of the fourteenth century. Froissart speaks of it in 1385 as the Paris of Scotland. He says, it did not contain so many as 4,000 houses, meaning, beyond a doubt, 400, for it then consisted of but a single street. No houses of that era survive to prove how small, rude, and frail they were. Wood continued to be a large material in the domestic architecture of our city throughout the fifteenth century, during which Edinburgh was gradually becoming a town of importance, a frequent seat of Parliament, and the residence of the monarch. A house had an inner stone fabric, but there was always a wooden front 6 or 7 feet in advance, formed by projecting beams. We do not probably possess in Edinburgh any houses of older date than the close of the fifteenth century. About that time the Cowgate was building (a name which appears to be a corruption of "Sou'gate," *i.e.* Southgate), as a new town or suburb for the accommodation of the higher classes of people. A few of the primitive houses of the Cowgate, built about 1490 or 1500, still exist. They are the contemporaries of many castles, the ruins of which are now scattered over the country. The style of door seen in all these early wooden houses must be pronounced greatly superior in elegance to any doors given to modern houses either in Edinburgh or London. The next stage of house-building gives us the same form, with merely a little more elevation and the addition of some ornamental work. About 1540, houses were three and four stories high. The gallery in front of the first floor was usually open. There the family could promenade and enjoy the open air in privacy and comparative safety. Of the wooden-fronted houses of about 1540 we have still several interesting specimens, serving to recall to us Mary's reign. There is a fine example at the head of the West Bow. The covered space in front of the booths is still open and used for the exhibition of merchandise, though of a humble kind. In this respect, the house forms a last surviving fragment of what the High-street was, in mercantile respects, in the sixteenth century. Three or four specimens of this form of house are still to be seen along the north side of High-street. The characteristic features of all are alike—the strong skeleton-work of stone, with the wooden front 6 or 7 feet in advance, the outside stone stair projecting into the street, and the handsome moulded doorway. One handsome specimen opposite the head of Niddry-street is worthy of special notice on account of its double form. In 1572, when the castle and the city were in possession of the Queen's party and beleaguered by the troops of the Regent, the exigencies of the people for fuel led to the demolition of many of the timber buildings. The latest example of houses with wooden fronts is in the Netherbow, dated 1600. The mediæval custom of putting inscriptions on houses was displayed in full vigour in Edinburgh, but not so much before the Reformation as after. Having given many interesting specimens of these, the paper went on to state that houses wholly composed of stone, which before the reign of Mary had been rare exceptions, began after that period to become common. The earliest examples of these were built by wealthy citizens.

EARLY SCULPTURED MONUMENTS OF SCOTLAND.

Mr. John Stuart, secretary of the Society of Antiquaries of Scotland, read a communication "On the Early Sculptured Monuments of Scotland." The paper stated that these monuments might be considered the earliest existing expressions of the ideas, and the most genuine records of the skill of the early inhabitants of the country. He referred to the general use of pillars as memorials of events from the earliest period, and to the occurrence of such pillars in Scotland, both singly and in circular groups, as sepulchral memorials. The earliest notices furnished to us by our national historians serve only to show that the purpose and meaning of the sculptured pillars had been quite forgotten before the time when they were written. According to Boece, the hieroglyphic figures on them were borrowed from the Egyptians, and were used by the natives in place of letters; and both he and subsequent historians have assigned a Danish origin to many of them—an idea which is quite repudiated by the present race of Danish antiquaries. Mr. Stuart stated that the class of stones which he had presently in view comprised about 160 specimens. These consisted either of rude unhewn pillars, on which were sculptured various symbolic figures; of oblong dressed slabs, having crosses and other figures cut on their surface; and in a few cases of cruciform pillars with sculpture. Of those stones between the Dee and the Spey by far the larger number were rude pillars, having incised symbols without crosses; while in the country, on either side, the stones combined elaborate crosses with the symbols as well as with scenes of various kinds, exhibiting in many cases minute pictures of dress, armour, hunting, and other subjects. The symbols, except in two cases, were not found in the country south of the Forth, and were thus confined to the ancient country of the Picts. Mr. Stuart then pointed out various points of analogy and difference between the Scotch crosses and those in Ireland, Wales, and the Isle of Man. He adverted to the striking similarity of the style of ornament on the Scotch crosses to that in the ancient Irish and Saxon manuscripts, and drew the conclusion, that while there were many points common to the crosses of all the countries referred to, yet those in Scotland bore most strongly the impress of Irish art, as exhibited on remains of various sorts, ranging in point of date from the seventh to the eleventh century.

THE ANCIENT CORONATION-STONE OF SCOTLAND.

On Monday Mr. Joseph Hunter read a paper on the Scottish coronation-stone in Westminster Abbey, containing various historical incidents and charges connected with its reception at London. With reference to the genuineness of the stone, which had been controverted by some antiquaries, he stated his belief that the stone now in Westminster Abbey was the ancient coronation-stone of the Scottish monarchy, and that it had been carried away from Scone by Edward I.

Some conversation ensued, in which Mr. Cosmo Innes referred to the proposal made some ages later to restore the stone to Scotland, which was resisted by the citizens of London; and Mr. Joseph Robertson and others made some remarks on the question whether the stone was a throne or a pedestal for inauguration, the words in the ancient chronicle, "on which the kings were *set*," being rather ambiguous in this respect.

EDINBURGH CASTLE BEFORE 1573.

Mr. Robert Chambers then read a paper on Edinburgh Castle as it existed before the siege of 1573. He said that in the present Edinburgh Castle, under the mask of a modern military station and barrack, were the broken and degraded remains of a national fortress and royal residence of the old days of Scottish independence. He traced the history of the principal old buildings, and showed as far as possible what the castle was before the great alterations which it sustained in consequence of the memorable siege of 1573. Previous to that time the buildings of the castle were less numerous than now, as it showed scarcely any beyond the limits of the upper platform of rock or citadel towards the east. On the lower and wider platform, towards the north and west, there was little beyond a wall of defence running along the summit of the cliff, with turrets placed at intervals, and having in it a postern whence it was possible to descend the face of the rock. Notwithstanding its limited accommodation, however, it appeared to have been proposed in 1523 to have a garrison of 400 soldiers within the castle. On the upper platform were various buildings, some of which still existed, while others had been demolished in the siege referred to, or had given way to more common-place structures. At the north-east angle was a palace which had been used by successive Scottish sovereigns before Holyrood existed. We had no means of tracing this palace to a very early date. The saintly Queen Margaret, consort of Malcolm Canmore, lived in Edinburgh Castle at the end of the eleventh century, but none of the existing buildings could be safely identified as of her time, save the small chapel standing detached on the loftiest pinnacle of the rock, which, after a long period of neglect, had been repaired a few years ago. The massive series of buildings which rose from the rock at the south-east angle of the upper quadrangle or parade square, constituted strictly what remained of the palace as existing previous to 1573. The paper concluded with some remarks as to the origin of the name of *Castrum puellarum*, or Maiden Castle, given by early writers to Edinburgh Castle, a name which was common to many ancient ruins both in Scotland and England. It had been suggested by the late Mr. Chalmers, of Auldbar, that the derivation was from Mai-dun, a fort commanding a wide plain or district.

ST. MAGNUS'S CATHEDRAL, ORKNEY.

Sir Henry Dryden made a verbal communication regarding the antiquities of Orkney and Shetland, and described various interesting remains of a very ancient date. He in particular referred to the cathedral of St. Magnus, Kirkwall. He described the state of disrepair into which it had fallen previous to Government spending some thousands upon it a few years ago. He then spoke of some differences which had arisen between Government and the Burgh Council, the latter having now taken the matter into their hands, and committed, as the Institute must consider, some most barbarous outrages. They had entirely screened off the choir from the nave, in order to use the former as a parish church, the screens closing up the spaces between three of the finest arches. They had raised the floor 4 feet, thus hiding all the bases of the pillars, and had put in a gallery that hid the capitals, and the erection of which had knocked off a good deal of the foliage.

FRENCH AND SCOTTISH ARCHITECTURE.

Mr. J. H. Burton read a paper "On the Analogy of French and Scottish Architecture." No Englishman can take a general survey of the baronial residences he meets in Scotland without being forcibly struck by some national peculiarities which broadly distinguish them from the corresponding class of buildings in England. The peculiarities are varied, but their predominating characteristic is the spiral or rocket-shaped turret. I shall not say that this is a feature of which English architecture is totally divested. The luxuriant beauties of the English mansions are the spoils of every school, and where the Scots took their examples English architects would study. The turret is a prolific architectural device, susceptible of infinite variety. The Gothic turret or pinnacle is common both in ecclesiastical and baronial edifices, but it is distinguished from our turrets by its angularity and its crocketed decorations. Some buildings in England show a nearer approach to the Scottish turret. For instance, at Knebworth, in Hertfordshire, the ancestral mansion of Sir Bulwer Lytton's family, there are rich polygonal towers terminating in circular spiral roofs with that ogee curve which sometimes but not frequently is seen on the Scottish turret. At Wollaston Hall, in Nottinghamshire, the angular buttresses swell into circular abutments with curved spiral roofs, which give them a strong general resemblance to some of the turrets in Scotland; for instance, to those of Pinkie. But it may safely be said that there does not exist on the English side of the Border even *one* of these Oriental-looking clustered masses of tall chimneys, narrow crow-stepped gables, and numerous conical turrets, which are found strewed over Scotland from the Border to Inverness. While he notices these characteristics of the baronial residences of a comparatively late age, many of them still habitable, the stranger will find that the deserted and ruinous castle of the preceding period is often a simple, rude, square block, which will remind him of the Norman keep or donjon. On inquiry, however, he will find that the two are separated from each other by centuries, and by radical differences both in the external conditions in which they arose, and the internal character of their architecture. To account in some mea-

sure for these two phenomena—for the bare, square towers of the older period; for the fantastical, turretted mansions of later times—is the object of the society notices I have the honour to lay before this meeting. * * * The most natural primitive shape of a fortress is a square block. We find it in the Roman Wall, in the Wall of China, in Arabia, and among the earliest forms used in Europe. The Normans were by no means bigotted to this form, in their eager scramble for places of strength, they occupied the ponderous tombs left by the Romans and they would have occupied the Egyptian Pyramids and the Eastern mosques for the same purpose had these fallen in their way. The French antiquaries seem to think that many of the castles of their own country were begun by the Normans, and that the square Norman tower was hence the legitimate descendant of the Roman arx or citadel. Their evidence that some of these were built in the Roman cities at a moment of extreme emergency for defence against the invasions of the barbarians—evidence resting on their use of statuary, tombs, and whatever stones were available, to strengthen the walls—is exceedingly curious and interesting. It is enough here, however, to know that Rome stamped her architecture on the details, if not on the structural character, of the earliest feudal castles, in those characteristics which are called Norman or Romanesque work. Such were the earliest castles of England. But the fact already alluded to in the learned paper of Mr. Robertson is, I think, extremely striking and suggestive—the fact, namely, that there is not one known specimen of the kind of work called Norman or Romanesque—I mean early round arched work—in any baronial remain in Scotland. That there never was any of it, it would be preposterous to maintain, but the tendency of the negative evidence is to show that, as the earliest castles of England were planted there by the Normans, so the earliest feudal castles in Scotland were likewise those that were planted there by the Normans in a later age, and consequently a later style. It is remarkable, indeed, that when one castle—the Goblin Hall of Haddingtonshire—was built, just a little before the event which it is convenient for me to call the Scoto-Norman Conquest, the building of such an edifice was deemed an incident important enough to be commemorated in history. I am not prepared to say that there was not one castle in England before the Conquest—that Koningsburgh, and one or two others, have no claim whatever to Saxon origin. But I believe that, generally speaking, the residence of the Saxon gentleman was the fossed and palisadoed arena, with its numerous wooden buildings, so well described by Scott in Rotherwold, the abode of Cedric the Saxon. The castles which started up all over England immediately after the Conquest were, generally speaking, the simple square tower, without any flanking-work. As the simple square tower with round arches is the deposit of the Norman conquests of the eleventh century, so the screen with round towers at intervals, and pointed arches, is the deposit of the Norman conquests of the thirteenth century. Thus, our oldest castles in Scotland are undoubtedly of the later style of Norman-English. The prostration of Scotland from the War of Independence, is a matter pretty well known in history. There was no rearing of costly edifices, whether ecclesiastical or baronial, until long after that struggle was over. When lairds or chiefs in Scotland were again rich enough to build, they had to fall back upon the primitive square tower; hence it is that, as I have already said, there are many of them throughout Scotland which have a general external resemblance to the Norman keep, but are entirely distinct from it both in historical connection and architectural detail. The Scottish tower is generally much smaller and ruder than the Norman; and it is, of course, destitute of those peculiar features which form the connecting link between Gothic and Roman architecture. It was still of consequence to the Scottish laird to have flanking defences to his keep. He could not afford the princely round towers of the Edwardian baronial period, but he found an economical substitute creditable to his ingenuity. The projecting parapet was, of course, an available means of attack from above. At the angle, it was enlarged into a sort of machiculation or bastion. This is a common feature in many kinds of defensive architecture, but nowhere is it so confirmed and systematic as in the Scottish square towers of the fifteenth and sixteenth centuries. To see how Scottish architecture again emerged from the humble condition, it is necessary briefly to describe historical conditions which would be familiar to every one if our history, instead of being a mere parochial register, were written in the Catholic spirit of denoting Scotland's condition among the European States. After the War of Independence—which it is more just to consider the struggle of the Saxons in Scotland against Norman aggression than a national contest—Scotland arose, a separate nation, hating England. That metropolitan influence which it would naturally have received from the centre of British advancement in London was drawn from Paris. The Civil Law and French feudality were introduced. The Church, the Parliament, and the courts of justice were French. The Universities were French to the nicest peculiarity, and in the remote colleges of Aberdeen, the fresh students were called *bejeants*, just as they were in the University of Paris. Everything in Scotland might be said to have become French, except the language and the national character, and at last the countries were deemed so closely united, that it was discussed in Paris, as a matter of business, whether Scotland should be attached to the crown of France, or become an appanage for a cadet of the House of Vallois. It is now necessary to cast a glance at the progress of baronial building in France. The Edwardian form—consisting of screens and round towers—was there very prevalent. But a feature was superadded to it, not known in England, by the mounting of lofty cones, sometimes on the round towers, sometimes on the central building. There are instances of large separate round towers, on which such cones were subsequently mounted, as, for instance, the donjons of Guise and Semur. Sometimes the cone springs flush from the wall, sometimes it was raised behind the rampart. A good example of the latter may be found in Holyrood — our latest adaptation from the French. In its completion by Sir William Bruce, it was almost a direct copy from Chantilly, the abode of the Condés. In Paris, there were two fortresses of awful notoriety—the Temple, built by Hubert, the treasurer of the Order, who died in 1222, and the more recent Bastile. The latter, an excellent specimen of the Edwardian form as it continued for a long period in France—retained its original simplicity and gloom; but the Temple was decorated with a central spire, and a cone on each of its four flanking round towers. The conical form thus became an inveterate feature in the baronial architecture of France. When flanking works of a smaller and less costly character than towers were thrown out from the corners of buildings, they naturally assumed the conical shape, and thus the French chateau of the sixteenth century was encrusted with quantities of the rocket-shaped turrets already referred to. The architecture of our ancient allies when it reached this form was accurately copied in Scotland, and it is impossible for buildings to be more like each other than the French chateau of the middle of the sixteenth century and the Scottish mansion of about eighty years later.

SCIENTIFIC MATTERS IN FRANCE.

The French *Académie des Sciences* lately gave their sanction to various improvements, of which Doctor Henry Roger, one of the Professors, has published a succinct synopsis. Some of these matters are of high interest in England, and we give a portion of the synopsis.

The Dead Sea.—An analysis of the water of the Dead Sea was chemically prepared by M. Boussingault.

An Arab proverb declares, that "any one who loves his life will avoid the risk of moving over this sea." The caution of this proverb excited the curiosity of some daring travellers, who determined on exploring it scientifically. It is called "the Dead Sea," because its water is salt to such a degree that no fish can live therein; and it is also named "the Asphaltite Lake," because from time to time asphalte is found floating on its surface: it is the limit of an enormous crevice, or fissure of the earth, into which the River Jordan flows, at a level far deeper than the Mediterranean Sea. This profound sinking of the soil, in an extensive district of Southern Syria, at sixty miles' distance from the Mediterranean, is in itself such an extraordinary phenomenon, that even the persons who observed the facts, appear at first to have had doubts of their own correctness. Lieutenant Symonds, of the British navy, in the year 1841, by a triangulation, definitely fixed at 100 yards, the difference of the level between the two seas.

The ordinary proportion of the salts contained in the water of the ocean is not more than from 4 to 5 per cent. Various analyses have been chemically effected from 1789 to 1854, by Lavoisier, Klaproth, Gay-Lussac, Boutron-Charlard, and O. Henry, &c. who have given to the water of the Dead Sea a much larger figure,—such as 14, 26, and even 14 per cent. of saline matters. In the expedition of 1847, conducted by Lieut. Lynch, of the United States, some sailors, in two metal boats, went from the Jordan into the Asphaltite Lake, while in a state of violent agitation, they were soon covered with a saline incrustation, of which the pungent acritude produced very painful sensations, especially on the lips and eyes.

The mountains around are composed of enormous saliferous deposits, and isolated cylindrical blocks or columns of salt are common enough to justify the statement as to Lot's wife. In the bosom of these mountains of mineral salt,—in the midst of these salt deserts, one might find more than 200 wives, like her of Lot.

During the trip made by Lieutenant Lynch, the sea was at night covered by a phosphorescent scum, and the waves, when broken, exhibited in a sort of sepulchral haze, the dead wood and the lumps of rock scattered along the shore. This was accounted a remarkable phenomenon; since, to explain this phosphorescence, there were no microscopical animalculæ to be found in the water of the Asphaltite Lake. A sulphurous smell was, however, often felt, arising not from the waters of the lake, which have no odour whatever, but from the sulphurous springs, and the surrounding marshes.

The navigation of the Dead Sea is very dangerous, not merely from mephitic exhalations, but from other causes. Very few days passed in this excursion were enough to prove not only to the tourists, but to the men of science who accompanied them, that they could soon be mortally punished for their rash and daring curiosity. On the desolate shores, where the ruins are mouldering of the two impure cities that were annihilated by fire from heaven, the heat is excessive. During the expedition of 1847, the heat in the month of April rose to 43 centigrade, in the shade; and on the 26th of that month, as Lieut. Lynch states, "at four o'clock in the morning, the thermometer marked 30 degrees. The party was then at a short distance from the mountain of Usdom, and in the presence of a scene of vast desolation. On the one side was an imposing mass of mineral salt, and on the other the barren rocks of Moab. To the south was the salt plain, in which the Israelites several times defeated their enemies; and to the north, was the sea, veiled by a purple fog, and covering over the ruins of Sodom and Gomorrha. The brilliancy of the light was painful to the eyes, and breathing was almost impossible in an atmosphere of flame. Not one bird could be seen passing through the rarified air, nor was there a fish visible in the mysterious element over which we were moving, and which alone, of all the works of the Creator, did not contain a living being."

Chemists have tranquilly analysed in their laboratories the pestilential water brought from the Asphaltite Lake at the cost of such labour, of such pains, and even of so many lives. Their analyses do not always agree together; but the differences may be explained by the various depths at which the liquid was taken, and by the difference of the seasons of the year. The most striking results from these researches and experiments, and particularly from those of

M. Boussingault, are, besides the considerable quantity of saline matters, the absence of nitrates, and the strong proportion of bromine; a cubic yard contained from 6 to 8 lbs. of bromide of magnesia. If it ever happens that bromine shall be rendered applicable to a great extent for industrial purposes, it will be necessary to go for it to the Dead Sea.
